Statistics 1e Cengage Learning
A brief but complete outline of what belongs in a business case and why it belongs. It assumes no prior background in finance or business planning. The focus

is on questions like these: How do I prove that one choice is the best business decision? How do I show that all important costs and benefits are included? How do I show that alternative action proposals are

compared fairly? How do I establish value for benefits--even non financial benefits? How do I build a business case when I am in a government or non profit organization? How do I minimize risk and show management how to maximize business results?

Essentials of Business Statistics, Second Edition. Study Guide Taylor & Francis

This supplement text bridges the gap between the fundamentals of how businesses operate (processes) and the tools that business people use to accomplish their tasks (systems). The authors have developed this text for an introductory MIS or general business course to establish a fundamental understanding of business processes. Business students, regardless of their functional discipline, will be able to apply the real-world concepts discussed in this text immediately upon entering the workforce. As more and more businesses adopt enterprise systems globally, it becomes increasingly important for business schools to offer a process-based curriculum to better reflect the realities of modern business. Given the integration of business operations and enterprise systems, Magal and Word have

designed this text to reflect, in a practical and accessible format, how real-world business processes are managed and executed.
