No work has ever been produced previously that shows how historically geography has been constructed as a subject for the senior years of secondary schooling in Western Australia from 1917 to 1997. In doing so,

this book contributes to the existing corpus of international research on the history of curriculum and particularly the history of geography as a senior secondary school subject. Much of it is based on primary sources, including the textbooks and atlases used, along with syllabus manuals and geography examination papers. It also provides a framework for investigating the construction of senior secondary school geography curricula in other constituencies, and could act as a model for engaging in further research in curriculum history for other school subjects state-wide, nationally and internationally. The book also makes an important contribution to

the fields of curriculum design, curriculum development and curriculum innovation. It will be of great interest to historians of education, comparative educationists, education leaders, policy makers and librarians.

An Introduction to Mapwork and Practical Geography Lorenz Educational Press There is only one region--the surface of the earth--on which mankind finds its home. Yet, although much effort is devoted by geographers towards the study of this diversified environment as a whole, it has long seemed necessary, by the methods of a special or a regional geography', to study its component parts. And although nature abhors lines, geographers might appear to adore them, so busily do they engage themselves in delimiting on their maps allegedly significant areas called aeregions'. As a result, every student of geography in school, college of education and university has been taught, read books, and attempted to answer questions on regional geography. The problem of region in geographic thought--how it may be defined, how it has developed, and how it is applied--has been vigorously

debated within the discipline. In this incisive examination of the types of regions and regional methods treated in modern geography, Roger Minshull analyzes in detail the concepts of formal, functional, and city regions in an attempt to clarify this vexing problem. In addition to sizes, shapes, boundaries, and organization, the phenomena that usually form the content of regions are delineated in an attempt to define the nature of regional geography. As some regions are seen to be products of geographers' minds, it is suggested that certain influences, especially the methods of mapping the separate topics that form the content of regions, have been exaggerated. Regionalism and possible alternatives to the regional method are treated, and a large section of the book is devoted to the idea of the compage, in which the geographer's choice of topics and method of working is much freer than in more traditional approaches.
