Written by authors with extensive experience in the field and in the classroom, *Psychology and Law: Research and Practice, Second Edition*, offers the definitive perspective on the practical application of psychological research to the law. Curt R. Bartol and Anne M. Bartol emphasize the various roles psychologists and other mental health professionals play in criminal and civil legal matters. Topics such as family law, mental health evaluations, police interrogation, jury selection and decision making, involuntary civil commitment, and various civil capacities are included. The authors also emphasize the major contributions psychological research has made to the law and encourage critical analysis through examples of court cases, high-profile current events, and research. This comprehensive book examines complex material in detail and explains it in an easy-to-read way. New to the Second Edition: The new edition has been significantly reorganized to more closely align with the progression through the court system. A new chapter on children, adolescents, and criminal law (Chapter 8) provides you with information on adjudicative competence, comprehension of constitutional rights, and eyewitness identification and courtroom testimony. New feature boxes include case studies, research projects, and contemporary topics with discussion questions for classroom debate. Additional court cases and statutes have been integrated into chapters to emphasize the important role psychology plays in the legal process. The content is applied to real cases such as the *Masterpiece Cakeshop* case and the *Dassey* confession (comprehending *Miranda*). Over 300 recent research findings on topics related to psychology and law highlight cutting-edge research studies that help you understand what research does and prompt you to discuss the methodology and results. New pedagogical tables clearly illustrate complex information around ethical issues, APA amicus briefs, strengths and weaknesses of simulation studies, insanity standards within the states, effects experienced by survivors of traumatic incidents, and more. Increased coverage of contemporary issues encourage critical thinking and active learning by promoting discussions around current issues such as telepsychology, neuropsychology, adversarial allegiance, and actuarial instruments used in bail and sentence decision-making. ?

**Introduction to Algorithms, third edition** Princeton Review

The latest edition of the essential text and professional reference, with substantial new material on such topics as vEB trees, multithreaded algorithms, dynamic programming, and edge-based flow. Some books on algorithms are rigorous but incomplete; others cover masses of material but lack rigor. *Introduction to Algorithms* uniquely combines rigor and comprehensiveness. The book covers a broad range of algorithms in depth, yet makes their design and analysis accessible to all levels of readers. Each chapter is relatively self-contained and can be used as a unit of study. The algorithms are described in English and in a pseudocode designed to be readable by anyone who has done a little programming. The explanations have been kept elementary without sacrificing depth of coverage or mathematical rigor. The first edition became a widely used text in universities worldwide as well as the standard reference for professionals. The second edition featured new chapters on the role of algorithms, probabilistic analysis and randomized algorithms, and linear programming. The third edition has been revised and updated throughout. It includes two completely new chapters, on van Emde Boas trees and multithreaded algorithms, substantial additions to the chapter on recurrence (now called "Divide-and-Conquer"), and an appendix on matrices. It features improved treatment of dynamic programming and greedy algorithms and a new notion of edge-based flow in the material on flow networks. Many exercises and problems have been added for this edition. The international paperback edition is no longer available; the hardcover is available worldwide.

Students taking a personnel or human resources management course often do not enter the course bursting with curiosity or unbridled enthusiasm. After all, what kind of excitement can there be in studying how to process payroll, check employment references, or learn about some arcane government regulation? It is unfortunate and ultimately self-defeating if such a mindset about human resources persists, because in today's business world, organizational success and competitive advantage come from the "people" side of the business--a workforce that is highly competent and committed to the success of the organization. The key for students in this field is to learn how to use human resources management (HRM) to achieve this advantage. It is important for students to learn to identify, develop, and manipulate policies and programs to produce desired outcomes. A wide range of critical HRM experiences are presented in this book as either exercises, applications, or experiments--all designed to help students see the choices available and experience their implications in managing the organization. They also offer examples of how HRM function must operate within a framework of rules and regulations. More specifically, this book contains over 30 different situations that illustrate both classic and contemporary human resources problems. It covers the entire spectrum of HRM from establishing policies and goals, through job analysis and evaluation, personnel planning, selection and appraisal, to compensation and benefits, training, organizational improvement, and safety and labor relations. Most of the situations described are drawn from the real-life experiences of managing human resources, including several cases from today's headlines. The case exercises, applications, and experiments are designed to be used as part of regular classroom instruction and can be used with any textbook. The exercises incorporate a number of different learning processes, including case discussions, self-assessments, interviews of others, data analysis, team teaching, testing, experimental observation, program creation and design, role-playing, exercise simulations, training, and participation in experiments. The teacher can use these experiential learning activities to supplement regular classroom instruction; the activities clarify, crystallize, and expand the understanding gained from the lectures. Of special interest: \* All of the exercises can be conducted during class times or can be used as homework assignments. \* The instructor's manual is organized for easy use with a summary of each case, guidelines for administering each case, plus supplemental or background information. \* An exercise planning table links each exercise with the chapters found in a number of the most commonly used HRM textbooks. \* Most of the cases are based on actual events, drawn from the author's professional or consulting experience or from events first reported in the national media. Each case is intended to replicate and carry a high degree of fidelity to "real world" conditions as fully as possible. \* The experiments in the book are intended to serve as both discovery processes and illustrations of the procedures and rules invoked in developing human resources systems. In many of these experiments, students draw on their own background and perspectives to test out various points of view. The experiments illustrate some of the underlying research that often serves as the basis for HRM policies and procedures.

Climate change has been the subject of thousands of books and magazines, scientific journals, and newspaper articles daily. It 's a subject that can be very political and emotional, often blurring the lines between fact and fiction. The vast majority of research, studies, projections and recommendations tend to focus on the human influence on climate change and global warming as the result of CO2 emissions, often to the exclusion of other threats that include population growth and the stress placed on energy sources due to emerging global affluence. *Climate Vulnerability, Five Volume Set* seeks to strip away the politics and emotion that surround climate change and will assess the broad range of threats using the bottom up approach—including CO2 emissions, population

growth, emerging affluence, and many others—to our five most critical resources: water, food, ecosystems, energy, and human health. Inclusively determining what these threats are while seeking preventive measures and adaptations is at the heart of this unique reference work. Takes a Bottom-Up approach, addressing climate change and the threat to our key resources at the local level first and globally second, providing a more accurate and inclusive approach. Includes extensive cross-referencing, which is key to readers as new connections between factors can be discovered. Cuts across a number of disciplines and will appeal to Biological Science, Earth & Environmental Science, Ecology, and Social Science, comprehensively addressing climate change and other threats to our key resources from multiple perspectives

300 million powerpoint presentations are given daily, yet there is a disconnect between the amazing technology of powerpoint and a mediocre student learning experience. To unleash the full potential of powerpoint presentations, we must do a better job of creating presentations that fit the educational needs of students. Slides for Students does just that. Slides for Students is an open and honest discussion about powerpoint in the classroom. A need exists for thoughtfully designed and implemented classroom instruction that focuses on the learner rather than on the technology. This book was written to translate academic research findings into practical suggestions about powerpoint that educators can use. Divided into two parts, Slides for Students discusses the history of powerpoint, explores academic studies on the topic, and demonstrates how to design slides to best suit educational needs and engage with students to avoid the dreaded "death by powerpoint."

Is the lecture an outmoded teaching method that inhibits active learning or is it a potentially powerful tool that is an essential part of every teacher's repertoire? This book presents up-to-date research on the different types of lecture, on what constitutes effective lecturing, and on the impact of lecturing when done appropriately and well. It fills the void in professional development resources on how to lecture, validating the practice when it's aligned with the educational mission of creating engaged learning environments. Christine Harrington and Todd Zakrajsek demonstrate that, rather than lecture and active learning being mutually exclusive or either-or propositions, the effectiveness of the former can be greatly enhanced when combined with active learning techniques through what they define as dynamic lecturing; and provide context about the need to balance these approaches to meet the needs of students as they progress from novice to advanced learners. They present a range of strategies that enhance student learning during lectures. They open each chapter with the evidence behind each lecturing strategy they describe, and conclude with practical suggestions for quick application in the classroom. They offer readers the lecture planning and evaluation tools for reworking their lectures in ways that provide high-level engagement and achievement for their students. The opening section of the book explores the benefits of lecturing and describes the different modalities of lecture, with an assessment of the advantages and disadvantages of each. The second section focuses on educational strategies to enhance the lecture, including, among others, activating prior knowledge, emphasizing important points, effectively using multi-media, making concepts meaningful via examples, and the importance of retrieval practice. Each covers the underlying theory and research, and advice on how to align the engagement techniques with instructional goals. The book concludes with guidance on effective planning for lecturing and helping chairs, administrators, or peers engage in effective evaluation of the lecture. This is a dynamic resource for all faculty interested in revitalizing their teaching. The strategies are succinct, easy to incorporate into lectures and, done well, will have immediate impact and increase student mastery of course content.
