Precalculus is adaptable and designed to fit the needs of a variety of precalculus courses. It is a comprehensive text that covers more ground than a typical one- or two-semester college-level precalculus course. The content is organized by clearly-defined learning objectives, and includes worked examples that demonstrate problem-solving approaches in an accessible way. Coverage and Scope Precalculus

contains twelve chapters, roughly divided into three groups. Chapters 1-4 discuss various types of functions, providing a foundation for the remainder of the course.
Chapter 1: Functions
Chapter 2: Linear Functions
Chapter 3: Polynomial and Rational Functions
Chapter 4: Exponential and Logarithmic Functions
Chapters 5-8 focus on Trigonometry. In Precalculus, we approach trigonometry by first introducing angles and the unit circle, as opposed to the right triangle approach more commonly used in College Algebra and Trigonometry courses.
Chapter 5: Trigonometric Functions
Chapter 6: Periodic Functions
Chapter 7: Trigonometric Identities and Equations
Chapter 8: Further Applications of Trigonometry
Chapters 9-12 present some advanced Precalculus topics that build on topics introduced in chapters 1-8. Most Precalculus syllabi

include some of the topics in these chapters, but few include all. Instructors can select material as needed from this group of chapters, since they are not cumulative. Chapter 9: Systems of Equations and Inequalities
Chapter 10: Analytic Geometry
Chapter 11: Sequences, Probability and Counting Theory
Chapter 12: Introduction to Calculus

Within the splendour of the Time Shield, six hours is equivalent to a minute on earth; but beware, in the midst of its beauty hides a terrible spell-would you dare to enter? Inquisitive seventeen-year-old Sarah Brown had resigned herself to a quiet summer with her aunt in their town Cherryfield - then she meets Mark Louis. Mark Louis de la Mer is an eighteen-year-old fairy-human hybrid, who, in 1908, was hidden in a Time Shield by his supernatural mother following the murder of his father. Due to the unforeseen presence of a Holding Spell within the shield, Mark has

since been trapped. He cannot directly access the spell which is hidden within a maze of terror, but Sarah can ... that is, if she consents to. For Sarah to destroy the spell, she will not only need to undergo intense physical training, but also must face her innermost fears. Destroying the Holding Spell is just one part of the trial that awaits them both. His father's evil killers have been on the lookout for him, and Mark's release would bring the supernatural into Cherryfield; parasite imps, fiendish monsters, and last but not the least, his mother's brother Noel - a formidable fairy-sorcerer hybrid. Ancient magic, superheroines, the realms to Faie, Victorian princes, murder and love ... Welcome to The Time Shield Series.

Integrated Math, Course 4, Student Edition

This book is for only two kinds of people: those who are interested in science and math, and those who aren't. And so, motivated by this powerful idea, *Calculus for Everyone* presents the mathematics of change in an extremely effective way for anyone with a first-year course in algebra. Yet it does so without dumbing calculus down. In fact, *Calculus for Everyone* is not only for students who would have never dreamt of taking calculus, it is also for those who have already taken a standard calculus course, as well as for those who will go on to take such a course. Based on more than a decade of classroom experience, this book provides mastery of calculus's core by

focusing on the foundational concepts of limits, derivatives, and integrals, explaining how all three are united in the fundamental theorem of calculus. Moreover, *Calculus for Everyone* explains how the story of calculus is central to Western culture, from Plato in ancient Greece, to today's modern physics. Indeed, this book explains why calculus is needed at all-and why it is needed so badly. By mastering the core of calculus-as well as seeing its meaning and significance-students will not only better understand math and science in general, but contemporary culture and their place in it.
