This volume encompasses the range of issues encountered by language scholars who teach and research in departments of languages and cultures within the higher education system, predominantly in Australia, but touching other universities worldwide. Related studies on language planning, methodology or pedagogy have focused on one or more of these same issues, but rarely on their totality. Intersections as a metaphor running discreetly through the essays in this volume, connects them all to a lived reality. The field of languages and cultures, as it is practised and reflected upon in Australian universities, is essentially an interdisciplinary and interconnecting space - one in which linguistic and disciplinary diversities meet and join forces, rather than collide or disperse along different pathways. The international and local studies featured here focus on language planning, new pedagogies and language reclamation and link to meeting points and commonalities. They show that language scholars are increasingly finding themselves on common ground as they tackle issues of policy and practice affecting their field, whether within their institutions, within the tertiary system, or within the framework of government policy.

Have you ever heard of Suggestopedia? Do you know what a gallery walk is? How about the difference between a stem and a foil? Maybe you don't think it's necessary to know these education terms. Diane Ravitch thinks otherwise. Education, like most professions, has its own unique vocabulary that is often unfamiliar to outsiders. But unlike those of other professions, Ravitch contends, the language of education must be clear and intelligible to all. Because education in large part determines the future of our society, economy, and culture, it's crucial that education issues be understood by the general public. And to understand the issues, we need to understand the specialized language used in the field. In this book, Ravitch demystifies the often-obscure and ever-changing lingo of the education field. With more than 500 entries, EdSpeak translates what Ravitch refers to as the "strange tongue" of pedagogese into plain English, adding historical context and lively commentary along the way. This glossary will serve as a valuable resource both for veteran educators who need to stay abreast of newly emerging terminology and for newcomers to the profession--be they teachers, administrators, parents, students, or just citizens who care about what happens in the classroom.

Plagiarism is a problem with far-reaching consequences for the sciences. However, even today's best software-based systems can only reliably identify copy & paste plagiarism. Disguised plagiarism forms, including paraphrased text, cross-language plagiarism, as well as structural and idea plagiarism often remain undetected. This weakness of current systems results in a large percentage of scientific plagiarism going undetected. Bela Gipp provides an overview of the state-of-the art in plagiarism detection and an analysis of why these approaches fail to detect disguised plagiarism forms. The author proposes Citation-based Plagiarism Detection to address this shortcoming. Unlike character-based approaches, this approach does not rely on text comparisons alone, but analyzes citation patterns within documents to form a language-independent "semantic fingerprint" for similarity assessment. The practicability of Citation-based Plagiarism Detection was proven by its capability to identify so-far non-machine detectable plagiarism in scientific publications.
