This popular text advocates an inquiry and activity-based view of social studies teaching that respects the points of view of students and teachers. Based in practice and experience, it offers systematic support and open, honest advice for new teachers, is conversational not pedantic, and provides lots of examples. While the structure and most of the topics remain largely the same as before, this Third Edition presents new lesson ideas in every chapter especially designed to help new teachers to address learning standards, to work in inclusive settings, and to promote literacy and the use of technology in social studies classrooms puts a heavier focus on what is important to know and why includes new essays on the politics of social studies education responds to opponents of project- or activity-based social studies instruction and multicultural education with a sharpened defense of both of these approaches throughout the book Intended as a text for undergraduate and graduate pre-service social studies methods courses, this text is also useful for in-service training programs, as a reference for new social studies teachers, and as a resource for experienced social studies educators who are engaged in rethinking their teaching practice.

This book provides a solution to the ecological inference problem, which has plagued users of statistical methods for over seventy-five years: How can researchers reliably infer individual-level behavior from aggregate (ecological) data?

In political science, this question arises when individual-level surveys are unavailable (for instance, local or comparative electoral politics), unreliable (racial politics), insufficient (political geography), or infeasible (political history). This ecological inference problem also confronts researchers in numerous areas of major significance in public policy, and other academic disciplines, ranging from epidemiology and marketing to sociology and quantitative history. Although many have attempted to make such cross-level inferences, scholars agree that all existing methods yield very inaccurate conclusions about the world. In this volume, Gary King lays out a unique--and reliable--solution to this venerable problem. King begins with a qualitative overview, readable even by those without a statistical background. He then unifies the apparently diverse findings in the methodological literature, so that only one aggregation problem remains to be solved. He then presents his solution, as well as empirical evaluations of the solution that include over 16,000 comparisons of his estimates from real aggregate data to the known individual-level answer. The method works in practice. King's solution to the ecological inference problem will enable empirical researchers to investigate substantive questions that have heretofore proved unanswerable, and move forward fields of inquiry in which progress has been stifled by this problem. Every major measure of students' historical understanding since 1917 has demonstrated that students do not retain, understand, or enjoy their school experiences with history. Bruce Lesh believes that this is due to the way we teach history -- lecture and memorization. Over the last fifteen years, Bruce has refined a method of teaching history that mirrors the

process used by historians, where students are taught to ask questions of evidence and develop historical explanations. --from publisher description.

### HISTORY AND PHILOSOPHY OF SCIENCE AND TECHNOLOGY - Volume III CHANGDER OUTLINE

Reciprocity has been critical in the philosophy and social sciences of the 20th century. Over the last seven decades, several countries settled by European powers have become autonomous, and returning has become a challenge.

Consequently, writing on reciprocity as a central theme requires time and implies a deep dedication to the community. There is a need to explore the factors and policies behind the study agendas and secret philosophies before and after European involvement. Reciprocity and Its Practice in Social Research aims to open the controlled consciousness of self as a human being and then as a scholar to the community via the methodological lens. It analyzes reciprocity from the Greek tradition to Medeabale Arab to the early colonial or pre-colonial period. It specifically addresses the benefit of social research on the community and seeks ways to revolutionize and improve current research and academic processes. Covering topics such as the philosophy of science, indigenous science, and Western metaphysics, this book is an essential resource for anthropologists, philosophers, sociologists, university faculty and administration, students of higher education, librarians, researchers, and academicians.

Kautilya, also known as Chanakya, is India's most illustrious political economist of all time. He regarded economic activity as the driving force behind the functioning of any political dispensation. In fact, he went to the extent of saying that revenue should take priority over the army because sustaining the army was possible out of a well-managed revenue system. Kautilya advocated limiting the taxation power of the State, having low rates of taxation, maintaining a gradual increase in taxation and most importantly devising a tax structure that ensured compliance. He strongly encouraged foreign trade, basing it on the premise that for a successful trade contract to be established, it had to be beneficial to all. He emphasised State control and investment in land, water and mining. Kautilya was a true statesman who bridged the gap between experience and vision. For Kautilya, good governance was paramount. He suggested built-in checks and balances in systems and procedures for the containment of malpractices. Many postulates of Kautilya's philosophy of political economy are applicable to contemporary times.
