a) Ethane in
staggered
conformation has C
3-rotational axis

passing through the C-C bond. It has three C₂-rotational axes perpendicular to the principal C₃-rotational axis and through the midpoint of the C-C bond. It has not any h-plane. But it has 3 d-planes containing two carbons and anti two hydrogens. Hence the point group of ethane in the staggered conformation will be D_{3d}.
