How diverse or potentially overlapping are the numerous self-models, self-theories, and directions of self-research? It has become clear that the processes associated with the self are complex and diverse, and that many of the approaches associated with the self have been pursued in isolation.

Moreover, the fact of there being different traditions within developmental and social psychology, as well as different traditions in Europe and North America, has also led to a certain cacophony when we examine the self-field as a whole. The chapters here confront these differences, trying to come to terms with phenomena that are overarching, that extend through the dimensions of developmental psychology, social psychology, motivation psychology, and parts of clinical psychology. The book as whole gives a clear presentation of the issues, questions and phenomena that surface in research fields known as self psychology.

What do children know about work, careers, and related topics? What is the pattern of growth in values, attitudes, beliefs, and knowledge? Using quantitative and anecdotal evidence gathered from interviewing over 900 grade-school students in five New Jersey communities, the authors analyze childhood socialization to the concept of work. Existing literature on this topic focuses on the critical years of occupational choice. But Goldstein and Oldham strongly suggest that much of the child's work-related development has already occurred prior to entry into secondary school, and that "career education" must receive increased emphasis during the elementary years. Their evidence corroborates the pattern of rapid progress toward childhood awareness of important social phenomena such as war, politics, race, gender roles, and economics. By the seventh grade, children have an awareness in these areas that approximates that of adults. Traditional stereo-types concerning appropriate work roles for women continue to exist at the elementary school level. This work is a comprehensive, empirical treatment of childhood socialization to work, fitting neatly into the growing body of literature on the socialization of the child into various political, economic, and social roles. Children and Work is in the sociological tradition, but the findings are presented in the context of a growing body of social science research on early socialization.

Spectrum Geography, Grade 5 Oxford University Press

In *Negotiating Opportunities*, Jessica McCrory Calarco argues that the middle class has a negotiated advantage in school. Drawing on five years of ethnographic fieldwork, Calarco traces that negotiated advantage from its origins at home to its consequences at school. Through their parents' coaching, working-class students learn to follow rules and work through problems independently. Middle-class students learn to challenge rules and request assistance, accommodations, and attention in excess of what is fair or required. Teachers typically grant those requests, creating advantages for middle-class students. Calarco concludes with recommendations, advocating against deficit-oriented programs that teach middle-class behaviors to working-class students. Those programs ignore the value of working-class students' resourcefulness, respect, and responsibility, and they do little to prevent middle-class families from finding new opportunities to negotiate advantages in school.
