Human anatomy and physiology - Answers

Working on a tricky human anatomy and physiology problem? On Study.com, you'll find answers to your toughest human anatomy and physiology questions, carefully explained step by step. Can't find ...

test questions answers anatomy physiology Flashcards and ...

Anatomy is more straight forward, just pure memorization (in fact, a lot of it). Physiology focuses more on chemical process in different parts of the body. I definitely think physiology is harder than anatomy because it requires much more critical thinking and more chemistry background (well, at least at my school).

Anatomy and Physiology Chapter 5 Questions and Study Guide ...

Anatomy is the body's parts or organs, and physiology is the study of what they are made up of, and how they work. You cannot have one without the other. Anatomy and Physiology go hand in hand.

How anatomy and physiology are related? - Answers

Anatomy is the study of functional areas or parts of the body whereas physiology is the study of biological and chemical processes that go on in your body. Anatomy is either normal gross anatomy: what can be seen and studied with the naked eye and normal histology: the anatomy of cells and tissues seen under a microscope.

What is the meaning of anatomy and physiology? - Answers

Human anatomy refers to the study of parts or the structure of human body whereas physiology refers to the function of the structures or different parts of the body.

What is the connection between anatomy and physiology ...

Anatomy is the study of the body and it's structures and physiology is the study of the function of those structures as it relates to the body.

Anatomy without physiology would leave us with no answers as to how the body functions.

Physiology is dependent on anatomy, and visa versa. This is because function affects the form, and the form affects the function. The difference is that anatomy is about the parts, and physiology is about how the parts work together. For example, a car is made of tires, an engine, body,...

[questions answers anatomy physiology Flashcards and Study ...](#)

Anatomy is a description of the structures of the body: bones, nerves, organs, joints, skin, etc. Physiology includes anatomy but is also concerned with how the various structures interact, and with their biochemical functioning. The anatomy of an animal can be determined by examining a dead body.
