This study of vocational education in advanced industrial countries contributes to two different areas of debate. The first is the study of the diversity of institutional forms taken by modern capitalism, and the difficulties currently surrounding the survival of that diversity. Rather than analysing economic institutions and governance in general, the authors specifically focus upon the key area of skill creation. The second theme is that of vocational education and training in its own right. While sharing the consensus that the advanced countries must secure competitive advantage in a global economy by developing highly-skilled work forces, the authors draw attention to certain awkward aspects of this approach that are often glossed over in general debate: 1. The employment-generating power of improvements in skill levels is limited: employment policy cannot depend fully on education policies; 2. While the acquisition of skills has become a major public need, there is increasing dependence for their provision on individual firms, with government action being restricted to residual care for the unemployed, rather than contributing at the leading edge of advanced

skills policy. Covering France, Germany, Italy, Japan, Sweden, the UK, and the USA, this book provides a unique approach to education and training within the broader political and economic environment. As such, it will appeal to students, teachers, and practitioners concerned with vocational training, human resource management, industrial relations, and the sociology of the economy.

The Eighth Edition of Zumdahl and DeCoste's best-selling INTRODUCTORY CHEMISTRY: A FOUNDATION that combines enhanced problem-solving structure with substantial pedagogy to enable students to become strong independent problem solvers in the introductory course and beyond.

Capturing student interest through early coverage of chemical reactions, accessible explanations and visualizations, and an emphasis on everyday applications, the authors explain chemical concepts by starting with the basics, using symbols or diagrams, and conclude by encouraging students to test their own understanding of the solution. This step-by-step approach has already helped hundreds of thousands of students master chemical concepts and develop problem-solving skills. The book is known for its focus on conceptual learning and for the way it motivates students by connecting chemical principles to real-life experiences in chapter-opening discussions and Chemistry in Focus boxes. The Seventh Edition now adds a questioning pedagogy to in-text examples to help students learn what questions they should be asking themselves while solving problems, offers a revamped art program to better serve visual learners, and includes a significant number of revised end-of-chapter questions. The book's unsurpassed teaching and learning resources include a robust technology package that now offers a choice between OWL: Online Web Learning and Enhanced WebAssign. Chemical education is essential to everybody because it deals with ideas that play major roles in personal, social, and economic decisions. This book is based on three principles: that all aspects of chemical education should be associated with research; that the development of opportunities for chemical education should be both a continuous process and be linked to research; and that the professional development of all those associated with chemical education should make extensive and diverse use of that research. It is intended for: pre-service and practising chemistry teachers and lecturers; chemistry teacher educators; chemical education researchers; the designers and managers of formal chemical curricula; informal chemical educators; authors of textbooks and curriculum support materials; practising chemists and chemical technologists. It addresses: the relation between chemistry and chemical education; curricula for chemical education; teaching and learning about chemical compounds and chemical change; the development of teachers; the development of chemical education as a field of enquiry. This is mainly done in respect of the full range of formal education contexts (schools, universities, vocational colleges) but also in respect of informal education contexts (books, science centres and museums).
