In this non-biased, politically neutral compendium, the authors trace the evolution of the U.S. government's role in the economy, including the history, ideas, key players, and court rulings that influenced its involvement. Today's economic environment is in constant flux, as is the participation of governments in it. Local, state, national, and global governmental agencies have taken on new responsibilities—with both positive and negative economic consequences. This book looks at the changing role of American government in the economy, from determining the measurements of economic health, to being mindful of corporate sustainability, to legislating business practices and consumer affairs. This comprehensive collection of essays draws from the contributions of 25 economic scholars along with seasoned educators David A. Dieterle and Kathleen C. Simmons to examine economic systems and the factors that influence them. The work includes summaries of important Supreme Court cases that have impacted America's economic infrastructure, biographies of famous economists, and descriptions of the seven key economic systems—command (socialism), democratic socialism, fascism, market (capitalism), state capitalism, transitional, and welfare state.

Issues in Economics Today is a modern issues book that presents the latest and most interesting topics. Most importantly, this title was developed to allow instructors the maximum flexibility to teach this material in a manner that fits their personal style. Some professors like to intertwine theory and issues while others like to lay the theoretical foundation first before heading into the issues. Some faculty will choose to set a theme for their course and pick issues consistent with that theme while others will let their students decide what issues interest them. Beginning with eight intensive core theory chapters and followed by 33 shorter issues chapters, there is no right way to use the book. The 33 issues chapters are divided into the following categories: Macroeconomic Issues, International Issues, Externalities and Market Failure, Health Issues, Government Solutions to Societal Problems, Discrimination Issues, Price Control Issues, and Miscellaneous Markets.
