Someone older, patient and wise, who understood you when you were young and searching, helped you see the world as a more profound place, gave you sound advice to help you make your way through it. For Mitch Albom, that person was Morrie Schwartz, his college professor from nearly twenty years ago. Maybe, like Mitch, you lost track of this mentor as you made your way, and the insights faded, and the world seemed colder. Wouldn't you like to see that person again, ask the bigger questions that still haunt you, receive wisdom for your busy life today the way you once did when you were younger? Mitch Albom had that second chance. He rediscovered Morrie in the last months of the older man's life. Knowing he was dying, Morrie visited with Mitch in his study every Tuesday, just as they used to back in college. Their rekindled relationship turned into one final "class": lessons in how to live. Tuesdays with Morrie is a magical chronicle of their time together, through which Mitch shares Morrie's lasting gift with the world.

The dramatic human story of an epic scientific quest and of one man's forty-year obsession to find a solution to the thorniest scientific dilemma of the day--"the longitude problem." Anyone alive in the eighteenth century would have known that "the longitude problem" was the thorniest scientific dilemma of the day-and had been for centuries. Lacking the ability to measure their longitude, sailors throughout the great ages of exploration had been literally lost at sea as soon as they lost sight of land. Thousands of lives and the increasing fortunes of nations hung on a resolution. One man, John Harrison, in complete opposition to the scientific community, dared to imagine a mechanical solution-a clock that would keep precise time at sea, something no clock had ever been able to do on land. Longitude is the dramatic human story of an epic scientific quest and of Harrison's forty-year obsession with building his perfect timekeeper, known today as the chronometer. Full of heroism and chicanery, it is also a fascinating brief history of astronomy, navigation, and clockmaking, and opens a new window on our world.

Intersubjectivity and usage play central roles in figurative language and are pivotal notions for a cognitively realistic research on figures of thought, speech, and communication. This volume brings together thirteen studies that explore the relationship between figurativity, intersubjectivity and usage from the Cognitive Linguistics perspective. The studies explore the impact of figurativity on areas of lexicon and grammar, on real discourse, and across different semiotic systems. Some studies focus on the psychological processes of the comprehension of figurativity; other studies address the ways in which figures of thought and language are socially shared and the variation of figures through time and space. Moreover, some contributions are established on advanced corpus-based techniques and experimental methods. There are studies about metaphor, metonymy, irony and puns; about related processes, such as humor, empathy and ambiguation; and about the interaction between figures. Overall, this volume offers the advantages and the opportunities of an interactional and usage-based perspective of figurativity, embracing both the psychological and the intersubjective reality of figurative thought and language and empirically emphasizing the multidimensional character of figurativity, its central function in thought, and its impact on everyday communication.
