From the 1960s onward, neoclassical economists have increasingly managed to block the employment of non-neoclassical economists, narrow the economics curriculum offered by universities to students, and made their theory increasingly irrelevant to understanding economic reality. Now, they are even banishing economic history and the history of economic thought from the curriculum. Why has this tragedy happened? At this time of accelerating momentum for radical change in the study of economics, "A Guide to What's Wrong with Economics" comprehensively examines the shortcomings of neoclassical economics and considers a number of alternative formulations. In it, a distinguished list of non-neoclassical economists provide an examination of some of the many worldly and logical gaps in neoclassical economics, its hidden ideological agendas, disregard for the environment, habitual misuse of mathematics and statistics, inability to address the major issues of economic globalization, its ethical cynicism concerning poverty, racism and sexism, and its misrepresentation of economic history. In clear and engaging prose, "A Guide to What's Wrong with Economics" shows how interesting, relevant and exciting economics can be when it is pursued, not as the defense of an antiquated and close-minded system of belief, but as a no-holds barred inquiry looking for real-world truths. This book is a must-read for all economists and their graduate students, as well as for the general reader.

An accessible account of the role of the modern university in the creation of economics During the late nineteenth century concerns about international commercial rivalry were often expressed in terms of national provision for training and education, and the role of universities in such provision. It was in this context that the modern university discipline of economics emerged. The first undergraduate economics program was inaugurated in Cambridge in 1903; but this was merely a starting point. Constructing Economic Science charts the path through commercial education to the discipline of economics and the creation of an economics curriculum that could then be replicated around

the world. Rather than describing this transition epistemologically, as a process of theoretical creation, Keith Tribe shows how the new "science" of economics was primarily an institutional creation of the modern university. He demonstrates how finance, student numbers, curricula, teaching, new media, the demands of employment, and more broadly, the international perception that industrializing economies required a technically-skilled workforce, all played their part in shaping economics as we know it today. This study explains the conditions originally shaping the science of economics, providing in turn a foundation for an understanding of the way in which this new language transformed public policy.

Knowledge and Power in the Global Economy Teacher Created Materials
Advancing a three-fold political agenda, this volume: * illuminates how the meanings assigned to a whole vocabulary of words and phrases frequently used to discuss the role and reform of U.S. public schools reflect an essentially economic view of the world; * contends that education or educational reform conducted under an economized worldview will only intensify the effects of the colonial relations of political and economic domination that it breeds at home and abroad; and * offers a set of alternative concepts and meanings for reformulating the role of U.S. public schools and for considering the implications of such a reformulation more generally for the underlying premises of all human relationships and activities. Toward these ends, the authors, in Part I, critically examine many of the most commonly used terms within the rhetoric of educational reform since the early 1980s and before. Part II links today's economized worldview to curricular and instructional issues. These essays are especially important for comprehending how the organization of school curriculum privileges those disciplines deemed most central to market expansion--math and science--and how the political centrality of the economic sphere influences the nature of the knowledge presented in specific content areas. Given that language constrains as well as advances human thought, the twin tasks of de-economizing education and decolonizing society will require a vocabulary that transcends the familiar terminologies addressed in Parts I and II. The entries in Part III cultivate the beginnings of such a vocabulary as the authors elucidate innovative concepts which they view as central to the creation of truly alternative educational visions and practices.

This Intro to Economics Teacher Guide contains materials for use with Bankruptcy of Our Nation and Money Wise DVD. Lesson Planner Weekly Lesson Schedule Student Worksheets Quizzes & Test Answer Key 10th-12th grade Year Economics 1/2 Credit Features: Each suggested weekly schedule has four easy-to-manage lessons that combine reading, worksheets, and vocabulary-building opportunities. Worksheets, quizzes, and tests are perforated and three-hole punched – materials are easy to tear out, hand out, grade, and store. Adjust the schedule and materials needed to best work within your educational program. Space is given for assignments dates. There is flexibility in scheduling. Adapt the days to your school schedule.
Workflow: Students will read the pages in their book and then complete each section of the Teacher Guide. They should be encouraged to complete as many of the activities and projects as possible as well. Tests are given at regular intervals with space to record each grade. If used with younger students, they may be given the option of only choosing activities or projects of interest to them and taking open book tests.
Calculating Credits: This course should take between 60 to 90 hours to complete, depending on any additional hours spent on added research, essay writing assignments, or suggested lab work, if assigned. Elective courses that take 60 hours are commonly assigned ½ credit, while those 120 hours or more are assigned a full credit; core courses require over 150 hours for a credit. Based on whether this is being used as a core or elective course, make your final credits calculation based on the total hours of coursework completed in the year.
