The Effects of School Reform in a Neoliberal/Neoconservative Age Cengage Learning

From the internationally bestselling author and prizewinning economist--a highly original guide to the global economy. In his bestselling *23 Things They Don't Tell You About Capitalism*, Cambridge economist Ha-Joon Chang brilliantly debunked many of the predominant myths of neoclassical economics. Now, in an entertaining and accessible primer, he explains how the global economy actually works--in real-world terms. Writing with irreverent wit, a deep knowledge of history, and a disregard for conventional economic pieties, Chang offers insights that will never be found in the textbooks. Unlike many economists, who present only one view of their discipline, Chang introduces a wide range of economic theories, from classical to Keynesian, revealing how each has its strengths and weaknesses, and why there is no one way to explain economic behavior. Instead, by ignoring the received wisdom and exposing the myriad forces that shape our financial world, Chang gives us the tools we need to understand our increasingly global and interconnected world often driven by economics. From the future of the Euro, inequality in China, or the condition of the American manufacturing industry here in the United States--Economics: The User's Guide is a concise and expertly crafted guide to economic fundamentals that offers a clear and accurate picture of the global economy and how and why it affects our daily lives.

Economics: The User's Guide Classroom Complete Press

Advancing a three-fold political agenda, this volume: \* illuminates how the meanings assigned to a whole vocabulary of words and phrases frequently used to discuss the role and reform of U.S. public schools reflect an essentially economic view of the world; \* contends that education or educational reform conducted under an economized worldview will only intensify the effects of the colonial relations of political and economic domination that it breeds at home and abroad; and \* offers a set of alternative concepts and meanings for reformulating the role of U.S. public schools and for considering the implications of such a reformulation more generally for the underlying premises of all human relationships and activities. Toward these ends, the authors, in Part I, critically examine many of the most commonly used terms within the rhetoric of educational reform since the early 1980s and before. Part II links today's economized worldview to curricular and instructional issues. These essays are especially important for comprehending how the organization of school curriculum privileges those disciplines deemed most central to market expansion--math and science--and how the political centrality of the economic sphere influences the nature of the knowledge presented in specific content areas. Given that language constrains as well as advances human thought, the twin tasks of de-economizing education and decolonizing society will require a vocabulary that transcends the familiar terminologies addressed in Parts I and II. The entries in Part III cultivate the beginnings of such a vocabulary as the authors elucidate innovative concepts which they view as central to the creation of truly alternative educational visions and practices.

**Edexcel Economics A Student Guide: Theme 4 A global perspective** Philip Allan

An accessible account of the role of the modern university in the creation of economics During the late nineteenth century concerns about international commercial rivalry were often expressed in terms of national provision for training and education, and the role of universities in such provision. It was in this context that the modern university discipline of economics emerged. The first undergraduate economics program was inaugurated in Cambridge in 1903; but this was merely a starting point. Constructing Economic Science charts the path through commercial education to the discipline of economics and the creation of an economics curriculum that could then be replicated around the world. Rather than describing this transition epistemologically, as a process of theoretical creation, Keith Tribe shows how the new "science" of economics was primarily an institutional creation of the modern university. He demonstrates how finance, student numbers, curricula, teaching, new media, the demands of employment, and more broadly, the international perception that industrializing economies required a technically-skilled workforce, all played their part in shaping economics as we know it today. This study explains the conditions originally shaping the science of economics, providing in turn a foundation for an understanding of the way in which this new language transformed public policy.
