Human Physiology/ The Urinary System
The kidneys filter metabolic wastes, excess
ions, and chemicals from the blood to form
urine. Ureters. The ureters are a pair of
tubes that carry urine from the kidneys to
the urinary bladder. The ureters are about
10 to 12 inches long and run on the left and
right sides of the body parallel to the
vertebral column.

Answers To Interactive Physiology Urinary System
The urinary bladder is a hollow, muscular and
distensible or elastic organ that sits on the pelvic
floor (superior to the prostate in males). On its
anterior border lies the pubic symphysis and, on its
posterior border, the vagina (in females) and
rectum (in males). The urinary bladder can hold
approximately 17 to 18 ounces (500 to 530 ml) of
