Mastering Concepts. 5.1 1. What is photosynthesis? Describe the reactants and products in words and in chemical symbols. Photosynthesis is the chemical process in which plants, algae, and some microorganisms convert light energy into chemical energy. A photosynthetic cell uses light energy, carbon dioxide, and water to form glucose and oxygen gas.

*Timberlake, Basic Chemistry, 5th Edition | Pearson*

The beetles at 30°C should fly farther, for at least two reasons. First, they used less energy initially and so have more energy to use for flight. Second, flight muscles use energy more efficiently when they are warm, so a warm beetle should be able to fly farther than a cold one.
