Big Ideas to Guide Effective Teaching

Pearson College Division

What makes psychology a science?

What is the logic underlying

psychological research? In this groundbreaking book Zoltán Dienes introduces students to key issues in the philosophy of science and statistics that have a direct and vital bearing on the practice of research in psychology. The book is organised around the influential thinkers and conceptual debates which pervade psychological research and teaching but until now have not been made accessible to students. In a clear and fluid style, Dienes takes the reader on a compelling tour of the ideas of: - Popper - Kuhn & Lakatos - Neyman &

Pearson - Bayes - Fisher & Royall

Featuring examples drawn from extensive teaching experience to ground the ideas firmly in psychological science, the book is an ideal companion to courses and modules in psychological research methods and also to those covering conceptual and historical issues.

Provides the framework to go from inquiry to understanding. Psychology: From Inquiry to Understanding, 3/e, teaches students how to test their assumptions, and motivates them to use scientific thinking skills to better understand the field of psychology in their everyday lives. By applying scientific thinking, students can more intelligently evaluate claims about both laboratory research and daily life. In the end, students will emerge with the "psychological smarts," or open-minded skepticism, needed to distinguish psychological

misinformation from credible, useful psychological information.
