From ensorcelled princesses to a frog that speaks, an enchanting collection of fairy tales from the Newbery Medal-winning author. The last mortal kingdom before the unmeasured sweep of Faerieland begins has at best held an uneasy truce with its unpredictable neighbor. There is nothing to show a boundary, at least on the mortal side of it; and if any ordinary human creature ever saw a faerie—or at any rate recognized one—it was never mentioned; but the existence of the boundary and of faeries beyond it is never in doubt either. So begins “The Stolen Princess,” the first story of this collection, about the meeting between the human princess Linadel and the faerie prince Donathor. “The Princess and the Frog” concerns Rana and her unexpected alliance with a small, green, flipper-footed denizen of a pond in the palace gardens. “The Hunting of the Hind” tells of a princess who has bewitched her beloved brother, hoping to beg some magic of cure, for her brother is dying, and the last tale is a retelling of the Twelve Dancing Princesses in which an old soldier discovers, with a little help from a lavender-eyed witch, the surprising truth about where the princesses dance their shoes to tatters every night.

Now a Netflix original documentary series, also written by Mark Harris: the extraordinary wartime experience of five of Hollywood's most important directors, all of whom put their stamp on World

War II and were changed by it forever Here is the remarkable, untold story of how five major Hollywood directors—John Ford, George Stevens, John Huston, William Wyler, and Frank Capra—changed World War II, and how, in turn, the war changed them. In a move unheard of at the time, the U.S. government farmed out its war propaganda effort to Hollywood, allowing these directors the freedom to film in combat zones as never before. They were on the scene at almost every major moment of America ’ s war, shaping the public ’ s collective consciousness of what we ’ ve now come to call the good fight. The product of five years of scrupulous archival research, Five Came Back provides a revelatory new understanding of Hollywood ’ s role in the war through the life and work of these five men who chose to go, and who came back. “ Five Came Back . . . is one of the great works of film history of the decade. ” --Slate “ A tough-minded, information-packed and irresistibly readable work of movie-minded cultural criticism. Like the best World War II films, it highlights marquee names in a familiar plot to explore some serious issues: the human cost of military service, the hypnotic power of cinema and the tension between artistic integrity and the exigencies of war. ” --The New York Times

Knowledge is a big subject, says Stuart Firestein, but ignorance is a bigger one. And it is ignorance--not knowledge--that is the true engine of science. Most of us have a false impression of science as a surefire, deliberate, step-by-step method for finding things out and getting things done. In fact, says Firestein, more often than not, science is like looking for a black cat in a dark room, and there may not be a cat in the room. The process is more hit-or-miss than you might imagine, with much stumbling and groping after phantoms. But it is exactly this "not knowing," this puzzling over thorny questions or inexplicable data, that gets researchers into the lab early and keeps them there late, the thing that propels them, the very driving force of science. Firestein shows how scientists use ignorance to program their work, to identify what should be done, what the next steps are, and where they should concentrate their energies. And he includes a catalog of how scientists use ignorance, consciously or unconsciously--a remarkable range of approaches that includes looking for connections to other research, revisiting apparently settled questions, using small questions to get at big ones, and tackling a problem simply out of curiosity. The book concludes with four case histories--in cognitive psychology, theoretical physics, astronomy, and neuroscience--that provide a feel for the nuts and bolts of ignorance, the day-to-day battle that goes on in scientific laboratories and in scientific minds with questions that range from the quotidian to the profound. Turning the conventional idea about science on its head, Ignorance opens a new window on the true nature of research. It is a must-read for anyone curious about science.

John T. Chain, Jr., rose from a second lieutenant to four-star general and led our national missile defense program. Mike Harper led ConAgra Foods from \$636 million to \$20 billion in 20 years and increased its stocks value 150 times over. Ask Gary Cohen what these remarkable leaders have in common and his answer will be straightforward: They use questions to generate fresh ideas, inspire committed action, and build an army of forward-thinking leaders. In Just Ask Leadership, Cohen steers you away from the all-too-common idea that if you don ’ t assert yourself with strong statements, you will not be respected. On the contrary, statistics prove that 95 percent of employees prefer to be asked questions rather than be told what to do. Involving employees and colleagues in decision making processes builds an environment rich with energy, excitement, and innovative problem solving. Just Ask Leadership outlines not only specific questions to ask in certain contexts, but also how to implement question-based leadership as a whole.
