At a time when theories of evolution are undergoing renewed controversy, the study of the Eonic Effect can break the deadlock, by looking at world history in the light of ' evolution '. The assumption that evolution occurs at random is the crux of the dispute, and one confused with issues of religion and secularism. We can detect

a non-random pattern in the record of civilization itself, to see ' evolution in action ' on a stupendous scale. We live in the first generations with enough data to detect this phenomenon. In the confusion of evolutionary theories, the unexpected discovery of deep level structure can allow us to deconstruct ' fl at history ', and assess claims of directionality in evolution. In the process the theory of natural selection applied to human evolution is seen to fail a photo finish test. The book provides a new model for the study of the overlap of history and evolution, and a critique of current views of the descent of man.
