1. Examine your earthworm and determine the dorsal and ventral surface of the earthworm. (The ventral side is lighter in color) 2. The openings toward the anterior end of the worm are the

sperm ducts. The openings near the clitellum are the genital setae. 3. Locate the dark line that runs down the dorsal side of the worm, this is the dorsal blood vessel.

Earthworm Dissection Guide Anatomy | HST Learning Center

Earthworm Dissection: Internal Anatomy. 1. Lay the worm on your dissecting tray with its dorsal side facing up. Use dissection pins to secure each end on the tray. Start your dissection about an inch posterior to the clitellum. Lift up the skin with a pair of forceps and snip an opening with a pair of dissecting scissors. Insert the scissors into the opening and cut in a straight line all the way up through the mouth.

3. Use a hand lens as you observe all parts of the worm, externally and internally. Find the anterior end by locating the prostomium, which is a fleshy lobe that extends over the mouth. The other end of the worm ' s body is the posterior end, where the anus is located. 4. Locate the clitellum, which extends from segment 33 to segment 37.

Earthworm Dissection Worksheets & Teaching Resources | TpT

Put the worm on the dissecting tray, keeping the dorsal surface upwards and fix it in a straight line on the wax with a few pins passing through the skin of the lateral sides and one at each of the anterior and the posterior end. Care should be taken not to damage the nerve ring at the anterior end and the anal region at the posterior end.

Earthworm Anatomy and Dissection Guide - Biology Junction

Earthworm Dissection. Earthworms are ideal specimens to use for teaching basic anatomy and investigating simple organ systems. Although these annelids, or segmented worms, are one of the simpler preserved invertebrates, the digestive, circulatory, reproductive and nervous systems are well developed and easy to identify.

Earthworm Dissection Lab

Answers. Worms do many of

the things humans do to survive.

They breathe, move around,
reproduce, and eat. Worms have
the epidermis; wich is like our
skin, a layer of nerve tissue, wich
acts like our sense of touch.

Instead of having just one heart,
they have five hearts. These
hearts regulate blood flow and
produce a pulse, just like ours.
