Behavioral Finance: The Second Generation Cambridge University Press

What determines whether complex life will arise on a planet, or even any life at all? Questions such as these are investigated in this groundbreaking book. In doing so, the authors synthesize information from astronomy, biology, and paleontology, and apply it to what we know about the rise of life on Earth and to what could possibly happen elsewhere in the universe. Everyone who has been thrilled by the recent discoveries of extrasolar planets and the indications of life on Mars and the Jovian moon Europa will be fascinated by Rare Earth, and its implications for those who look to the heavens for companionship.

Discusses reading comprehension and offers ways for teachers to develop it in their students, exploring the cognitive and social aspects of comprehension while viewing it as an active process.

The Worst Journey in the World Antarctic Journal Four Months at the Bottom of the World

By the #1 New York Times bestselling author of Killers of the Flower Moon, a powerful true story of adventure and obsession in the Antarctic, lavishly illustrated with color photographs Henry Worsley was a devoted husband and father and a decorated British special forces officer who

believed in honor and sacrifice. He was also a man obsessed. He spent his life idolizing Ernest Shackleton, the nineteenth-century polar explorer, who tried to become the first person to reach the South Pole, and later sought to cross Antarctica on foot. Shackleton never completed his journeys, but he repeatedly rescued his men from certain death, and emerged as one of the greatest leaders in history. Worsley felt an overpowering connection to those expeditions. He was related to one of Shackleton's men, Frank Worsley, and spent a fortune collecting artifacts from their epic treks across the continent. He modeled his military command on Shackleton's legendary skills and was determined to measure his own powers of endurance against them. He would succeed where Shackleton had failed, in the most brutal landscape in the world. In 2008, Worsley set out across Antarctica with two other descendants of Shackleton's crew, battling the freezing, desolate landscape, life-threatening physical exhaustion, and hidden crevasses. Yet when he returned home he felt compelled to go back. On November 13, 2015, at age 55, Worsley bid farewell to his family and embarked on his most perilous quest: to walk across Antarctica alone. David Grann tells Worsley's remarkable story with the intensity and power that have led him to be called "simply the best narrative nonfiction writer working today." Illustrated with more than fifty stunning photographs from Worsley's and Shackleton's journeys, *The White Darkness* is both a gorgeous keepsake volume and a spellbinding story of courage, love, and a man pushing himself to the extremes of human capacity.

With the negotiation of the International Protocol on Environmental Protection in 1991, those nations conducting scientific research programs in Antarctica face new challenges for stewardship of the southern continent and protection of its environment. *Science and Stewardship in the Antarctic* examines how the implementation of the 1991 agreement in the United States can be done in such a way to ensure the compatibility of scientific and environmental protection goals in this global laboratory. The book also addresses the potential for the new requirements both to benefit and harm research activities in Antarctica.

In this grand and astonishing tale, Alec Wilkinson brings us the story of S. A. Andrée, the visionary Swedish aeronaut who, in 1897, during the great age of Arctic endeavor, left to discover the North Pole by flying to it in a hydrogen balloon. Called by a British military officer “the most original and remarkable attempt ever made in Arctic exploration,” Andrée’s expedition was followed by nearly the entire world, and it made him an international legend. The Ice Balloon begins in the late nineteenth century, when nations, compelled by vanity, commerce, and science, competed with one another for the greatest discoveries, and newspapers covered every journey. Wilkinson describes how in Andrée several contemporary themes intersected. He was the first modern explorer—the first to depart for the Arctic unencumbered by notions of the Romantic age, and the first to be equipped with the newest technologies. No explorer had ever left with more uncertainty regarding his fate, since none had ever flown over the horizon and into the forbidding region of ice. In addition to portraying the period, The Ice Balloon gives us a brief history of the exploration of the northern polar regions, both myth and fact, including detailed versions of the two record-setting expeditions just prior to Andrée’s—one led by U.S. Army lieutenant Adolphus Greely from Ellesmere Island; the other by Fridtjof Nansen, the Norwegian explorer who initially sought to reach the pole by embedding his ship in the pack ice and drifting toward it with the current. Woven throughout is Andrée’s own history, and how he came by his brave and singular idea. We also get to

know Andrée’s family, the woman who loves him, and the two men who accompany him—Nils Strindberg, a cousin of the famous playwright, with a tender love affair of his own, and Knut Fraenkel, a willing and hearty young man. Andrée’s flight and the journey, based on the expedition’s diaries and photographs, dramatically recovered thirty-three years after the balloon came down, along with Wilkinson’s research, provide a book filled with suspense and adventure, a haunting story of high ambition and courage, made tangible with the detail, beauty, and devastating conditions of traveling and dwelling in “the realm of Death,” as one Arctic explorer put it.

An offbeat penguin shows his peers the power of individuality in this humorous tale from the author of Pookins Gets Her Way. Tacky is an odd bird. He likes to do splashy cannonballs and greet his companions with a loud "What's happening?" In fact, he's something of an eccentric, which wouldn't be a problem if all the other penguins weren't such...conformists. When intimidating visitors invade their peaceful, nice, icy land, it'll take a lot more than a bunch of perfect penguins to save the day. Thank goodness Tacky's such an odd bird! “This book is must reading for any kid—or grown-up—who refuses to follow the pack.”—Publishers Weekly

The Narrative of Arthur Gordon Pym of Nantucket Routledge

Behavioral finance presented in this book is the second-generation of behavioral finance. The first generation, starting in the early 1980s, largely accepted standard finance’s notion of people’s wants as “rational” wants—restricted to the utilitarian benefits of high returns and low risk. That first generation commonly described people as “irrational”—succumbing to cognitive and emotional errors and misled on their way to their rational wants. The second generation describes people as normal. It begins by acknowledging the full range of people’s normal wants and their benefits—utilitarian, expressive, and emotional—distinguishes normal wants from errors, and offers guidance on using shortcuts and avoiding errors on the way to satisfying normal wants. People’s normal wants include financial security, nurturing children and families, gaining high social status, and staying true to values. People’s normal wants, even more than their cognitive and emotional shortcuts and errors, underlie answers to important questions of finance, including saving and spending, portfolio construction, asset pricing, and market efficiency.

Follows the story of Arthur Gordon Pym, who stows away on the whaling ship, Grampus. Unfortunately for him he finds himself stuck in an adventure that includes mutiny, butchery, and cannibalism, premature burial, a ghost ship, gigantic polar bears, and uncharted islands peopled by barbarian hordes. That'll teach him not to try and get a free ride in the future. If he has one.

The inventions and inspiration of Benjamin Franklin and how they've stood the test of time What would you do if you lived in a community without a library, hospital, post office, or fire department? If you were Benjamin Franklin, you'd set up these organizations yourself. Franklin also designed the lightning rod, suggested the idea of daylight savings time, and invented bifocals—all inspired by his common sense and intelligence. In this informative book, Gene Barretta brings Benjamin Franklin's genius to life, deepening our appreciation for one of the most influential figures in American history. Now & Ben is a 2007 Bank Street - Best Children's Book of the Year.

Mr. Popper's Penguins Houghton Mifflin Harcourt

From deep ocean trenches and the geographical poles to outer space,

organisms can be found living in remarkably extreme conditions. This book provides a captivating account of these systems and their extraordinary inhabitants, 'extremophiles'. A diverse, multidisciplinary group of experts discuss responses and adaptations to change; biodiversity, bioenergetic processes, and biotic and abiotic interactions; polar environments; and life and habitability, including searching for biosignatures in the extraterrestrial environment. The editors emphasize that understanding these systems is important for increasing our knowledge and utilizing their potential, but this remains an understudied area. Given the threat to these environments and their biota caused by climate change and human impact, this timely book also addresses the urgency to document these systems. It will help graduate students and researchers in conservation, marine biology, evolutionary biology, environmental change and astrobiology better understand how life exists in these environments and their susceptibility or resilience to change.

Conquering Comprehension Waveland Press

New York Times Bestseller In the most ambitious one-volume American history in decades, award-winning historian and New Yorker writer Jill Lepore offers a magisterial account of the origins and rise of a divided nation, an urgently needed reckoning with the beauty and tragedy of American history. Written in elegiac prose, Lepore's groundbreaking investigation places truth itself—a devotion to facts, proof, and evidence—at the center of the nation's history. The American experiment rests on three ideas—"these truths," Jefferson called them—political equality, natural rights, and the sovereignty of the people. And it rests, too, on a fearless dedication to inquiry, Lepore argues, because self-government depends on it. But has the nation, and democracy itself, delivered on that promise? *These Truths* tells this uniquely American story, beginning in 1492, asking whether the course of events over more than five centuries has proven the nation's truths, or belied them. To answer that question, Lepore traces the intertwined histories of American politics, law, journalism, and technology, from the colonial town meeting to the nineteenth-century party machine, from talk radio to twenty-first-century Internet polls, from Magna Carta to the Patriot Act, from the printing press to Facebook News. Along the way, Lepore's sovereign chronicle is filled with arresting sketches of both well-known and lesser-known Americans, from a parade of presidents and a rogues' gallery of political mischief makers to the intrepid leaders of protest movements, including Frederick Douglass, the famed abolitionist orator; William Jennings Bryan, the three-time presidential candidate and ultimately tragic populist; Pauli Murray, the visionary civil rights strategist; and Phyllis Schlafly, the uncredited architect of modern conservatism. Americans are descended from slaves and slave owners, from conquerors and the conquered, from immigrants and from people who have fought to end immigration. "A nation born in contradiction will fight forever over the meaning of its history," Lepore writes, but engaging in that struggle by studying the past is part of the work of citizenship. "The past is an inheritance, a gift and a burden," *These Truths* observes. "It can't be shirked. There's nothing for it but to get to know it."
