Antifreeze Solutions in Home Fire Sprinkler Systems examines the usage of antifreeze solutions in residential sprinklers, and analyzes their effectiveness in controlling a fire condition and aiding in containment. The book also investigates the possibility of a large-scale ignition occurring from solutions of varying mixtures, and proposes the optimal ones for reducing flammability. Antifreeze Solutions in Home Fire Sprinkler Systems is designed for practitioners as a reference guide for handling antifreeze solutions in residential sprinkler systems. Researchers working in a related field will also find the book valuable.

Water based heating systems are efficient, flexible, versatile and offer many advantages over other heating systems. These advantages (fast response, good controllability, efficient zonal heating and largely silent operation) all require that initial design, installation, commissioning and maintenance be carried out to a high standard by competent engineers. Heating Services in Buildings provides the reader with a detailed and thorough understanding of the principles and elements of heating buildings using modern water based heating systems. A key theme of the book is that there is little difference, in the approach to the design and engineering, between domestic and commercial installations. The author's detailed but highly practical approach to the subject ensures there is sufficient information for students from both a craft background and those with more academic backgrounds to understand the material. This approach is complemented by straightforward, easy-to-use diagrams. Heating Services in Buildings supports a range of educational courses, including degree level building services engineering; NVQ Level 4 Higher Professional Diploma in Building Services Engineering; City & Guilds supplementary heating course and the Heating Design and Installation Course accredited by the European Registration Scheme (ERS).

For 16 years, Harry Spiller worked as a deputy sheriff, investigator, and sheriff in a place where murder isn't suppose to happen-- Southern Illinois. Investigating murder cases mainly in Williamson County and assisting in other counties, he learned the hard reality that murder is all around us. The act is swift for the victim and can happen to anyone, anywhere, at any time. It doesn't matter if you live in a big city or a small county, with brick-front towns, small farms, white church houses, lakes and ponds, the Shawnee National Forest, and the muddy rivers. All too often, victims fall prey in places that we think are safe to raise our families, places where we take walks on hot summer nights, where our children play in the park without concern, where we fish in the local pond hoping to land the big one, and where we leave our doors unlocked at night. In this book, Murder In The Heartland, there are 20 case files.
