Employee engagement is a novel concept that has been building momentum in recent years. Understanding Employee Engagement: Theory, Research, and Practice exposes the science and practice of employee engagement. Grounded in theory and empirical research, this book debates the definitions of engagement, provides a comprehensive evaluation of empirical findings in the engagement field including a focus on international findings, and offers implications for science and practice in organizations. Employers can learn how to foster and drive engagement to increase productivity and happiness, and

researchers can master the existing engagement literature and begin to study the many propositions and new models Zinta S. Byrne, Ph.D. proposes throughout the book.

***** ----- There are four characteristics of a "radical" CPA: -- 1. Their approach to technology. -- 2. Their use of social media. -- 3. Their understanding the relationship between pricing and value. -- 4. And their conviction that customer experience must drive a firm's internal processes. They Call Them The 'Radical' Practitioners There's an uprising of innovative CPAs in the accounting profession. This group created a new support community that is no longer driven by the establishment. The establishment can't control the conversation. In fact, they almost missed it. Now they endorse and support us. But it didn't begin with them. When Jody Padar first started doing this, she wasn't aware of anyone doing what she was doing. Then she went to Twitter. That's where she really

met her peers. They were learning from each other from day one and that same community of support is still happening today. A "radical" practitioner is a person that calls upon himself and others to redefine their firms and their lives by moving away from the traditional firm business model. The term radical applies because what they are doing to their firms and indirectly to the profession is fundamental to its core. It's abrupt, disruptive, unexpected, and far reaching. They are shaking up the status quo. They are changing because their customers and the world are changing around us all. Some might also perceive radical to be a negative term. It's not. The movement is more likely following the happy expression, "that's radical, dude." Everyone can learn and join the movement. The Radical CPA Community Is Here To Help You Be Radical, Too The best part about these radical professionals is that we believe in abundance. We promote and celebrate a new way of doing business and encourage the rest of the profession to move forward and change as a whole. *** Save! Buy direct from the publisher at https:

The world's economy has been transformed from a twentieth-century materials-based economy to the Age of the Knowledge-Based Economy - and the currency of this realm is ideas, imagination, creativity, and knowledge. According The World Bank, 80% of the developed world's wealth now resides in human capital. Perhaps President Ronald Reagan said

it best in his address to Moscow State University on May 31, 1988: "Like a chrysalis, we're emerging from the economy of the Industrial Revolution - an economy confined and limited by the Earth's physical resources - into, as one economist titled his book, "the economy in mind," in which there are no bounds on human imagination and the freedom to create is the most precious natural resource." Written by Ronald Baker and Ed Kless, hosts of The Soul of Enterprise: Business in the Knowledge Economy, the popular radio show on Voice America's Business Channel, The Soul of Enterprise: Dialogues on Business in the Knowledge Economy sounds the clarion call that organizations can no longer ignore this seismic shift that has occurred in the economy since 1959. The Soul of Enterprise introduces the three components of Intellectual Capital - human capital, social capital, and structural capital - and how to leverage them to create wealth in today's economy, by revealing: The physical fallacy - why wealth no longer consists of tangible things, but of ideas, imagination and

knowledge from human minds The best learning tool ever invented: After Action Reviews Why Frederick Taylor and the Scientific Management movement was a fraud and the wrong focus for knowledge workers The fact that effectiveness always and everywhere trumps efficiency The First Law of Pricing: All value is subjective The Second Law of Pricing: All prices are contextual The Morality of Markets: Doing well and doing good Why your organization - and you - need to be driven by a higher purpose than profit The Soul of Enterprise will inspire and challenge readers to unlock the enormous financial and competitive power hidden in the intellectual capital of their organizations and knowledge workers."

This book gathers the proceedings of the 2017 DepCoS-RELCOMEX, an annual conference series that has been organized by the Department of Computer Engineering at the Faculty of Electronics, Wrocław University of Science and Technology, since 2006. Its mission is to continue the heritage of the other two cycles of events – the RELCOMEX conferences (1977 – 89) and Microcomputer Schools (1985 – 95) – so this year we can celebrate the 40th anniversary of its origins. In contrast to those preceding series, which were focused on conventional reliability analysis, the goal of DepCoS is to promote a more comprehensive approach to system performability, which is now commonly called dependability. This innovative research area provides

answers to the latest challenges in reliability evaluation for contemporary complex systems. Its novelty is based on a multi-disciplinary approach to system theory, technology and maintenance of systems operating in real environments. Dependability analyses concentrate on the efficient completion of tasks, services and jobs by a system considered as a combination of technical, information and human assets, in contrast to “classical” reliability, which is generally limited to the analysis of technical resources and associated components and structures. The selection of papers for this volume illustrates the diversity of topics that need to be considered, from mathematical models and design methodologies through software engineering and data security issues, to practical engineering problems in technical systems. In addition, this edition of the conference hosted the 7th CrISS-DESSERT Workshop, which was devoted to the analysis and assurance of safety and cyber security in critical infrastructure and computer systems. Oxford University Press, USA Urbanisation and climate change are among the major challenges for sustainable development in Africa. The overall aim of this book is to present innovative approaches to vulnerability analysis and for enhancing the resilience of African cities against climate change-induced risks. Locally adapted IPCC climate change scenarios, which also consider possible changes in urban population, have been developed. Innovative strategies to land use and spatial planning are

proposed that seek synergies between the adaptation to climate change and the need to solve social problems. Furthermore, the book explores the role of governance in successfully coping with climate-induced risks in urban areas. The book is unique in that it combines: a top-down perspective of climate change modeling with a bottom-up perspective of vulnerability assessment; quantitative approaches from engineering sciences and qualitative approaches of the social sciences; a novel multi-risk modeling methodology; and strategic approaches to urban and green infrastructure planning with neighborhood perspectives of adaptation.
