Project execution and termination.  
Understanding Employee Engagement  
Springer

Employee engagement is a novel concept that has been building momentum in recent years. Understanding Employee Engagement: Theory, Research, and Practice exposes the science and practice of employee engagement. Grounded in theory and empirical research, this book debates the definitions of engagement, provides a comprehensive evaluation of empirical findings in the engagement field including a focus on international findings, and offers implications for science and practice in organizations. Employers can learn how to foster and drive engagement to increase productivity and happiness, and researchers can master the existing engagement literature and begin to study the many propositions and new models Zinta S. Byrne, Ph.D. proposes

throughout the book.

Urbanisation and climate change are among the major challenges for sustainable development in Africa. The overall aim of this book is to present innovative approaches to vulnerability analysis and for enhancing the resilience of African cities against climate change-induced risks. Locally adapted IPCC climate change scenarios, which also consider possible changes in urban population, have been developed. Innovative strategies to land use and spatial planning are proposed that seek synergies between the adaptation to climate change and the need to solve social problems. Furthermore, the book explores the role of governance in successfully coping with climate-induced risks in urban areas. The book is unique in that it combines: a top-down perspective of climate change modeling with a bottom-up perspective of vulnerability assessment; quantitative approaches from engineering sciences and qualitative approaches of the social sciences; a novel multi-risk modeling methodology; and strategic approaches to urban and green infrastructure planning with neighborhood perspectives of adaptation.

The world's economy has been transformed from a twentieth-century materials-based economy to the Age of the Knowledge-Based Economy - and the currency of this realm is ideas, imagination, creativity, and knowledge. According The World Bank, 80% of the

developed world's wealth now resides in human capital. Perhaps President Ronald Reagan said it best in his address to Moscow State University on May 31, 1988: "Like a chrysalis, we're emerging from the economy of the Industrial Revolution - an economy confined and limited by the Earth's physical resources - into, as one economist titled his book, "the economy in mind," in which there are no bounds on human imagination and the freedom to create is the most precious natural resource." Written by Ronald Baker and Ed Kless, hosts of The Soul of Enterprise: Business in the Knowledge Economy, the popular radio show on Voice America's Business Channel, The Soul of Enterprise: Dialogues on Business in the Knowledge Economy sounds the clarion call that organizations can no longer ignore this seismic shift that has occurred in the economy since 1959. The Soul of Enterprise introduces the three components of Intellectual Capital - human capital, social capital, and structural capital - and how to leverage them to create wealth in today's economy, by revealing: The physical fallacy - why wealth no longer consists of tangible things, but of ideas, imagination and knowledge from human minds The best learning tool ever invented: After Action Reviews Why Frederick Taylor and the Scientific Management movement was a fraud and the wrong focus for knowledge workers The fact that effectiveness always and everywhere trumps efficiency The First Law of Pricing: All value is subjective The Second Law of

---

Pricing: All prices are contextual The Morality of Markets: Doing well and doing good Why your organization - and you - need to be driven by a higher purpose than profit The Soul of Enterprise will inspire and challenge readers to unlock the enormous financial and competitive power hidden in the intellectual capital of their organizations and knowledge workers."

During the last decade, surface research has clearly shifted its interest from the macroscopic to the microscopic scale; a wealth of novel experimental techniques and theoretical methods have been applied and developed successfully. The Topics volume at hand gives an account of this tendency. For the understanding of surface phenomena and their exploitation in technical applications, the theoretical and experimental analysis at the microscopic

level is of particular interest. In heterogeneous catalysis, for example, a chemical reaction takes place at the interface of two phases, and the process occurring at the surface is composed of a sequence of individual microscopic steps. These individual steps include adsorption, desorption, surface diffusion, and reaction on the surface. These elementary steps are greatly influenced by the structure and the dynamics of the surface region. Especially the catalytic activity may strongly depend on the structure of the catalyst's surface. The necessity of performing surface investigations on a microscopic scale is also reflected clearly in research work relating to metal-semiconductor interfaces which determine essentially the properties of electronic device materials. The experimental probe on the atomic scale, coupled with parallel theoretical calculations, showed that the electronic properties of a metal-semiconductor interface strongly depend on the crystallographic structure of the semiconductor; in particular, it is important to know in this context the modification of the atomic arrangement in the surface region caused by the termination of the crystal by the surface.

----- There are four characteristics of a

"radical" CPA: -- 1. Their approach to technology. -- 2. Their use of social media. -- 3. Their understanding the relationship between pricing and value. -- 4. And their conviction that customer experience must drive a firm's internal processes. They Call Them The 'Radical' Practitioners There's an uprising of innovative CPAs in the accounting profession. This group created a new support community that is no longer driven by the establishment. The establishment can't control

the conversation. In fact, they almost missed it. Now they endorse and support us. But it didn't begin with them. When Jody Padar first started doing this, she wasn't aware of anyone doing what she was doing. Then she went to Twitter. That's where she really met her peers. They were learning from each other from day one and that same community of support is still happening today. A "radical" practitioner is a person that calls upon himself and others to redefine their firms and their lives by moving away from the traditional firm business model. The term radical applies because what they are doing to their firms and indirectly to the profession is fundamental to its core. It's abrupt, disruptive, unexpected, and far reaching. They are shaking up the status quo. They are changing because their customers and the world are changing around us all. Some might also perceive radical to be a negative term. It's not. The movement is more likely following the happy expression, "that's radical, dude." Everyone can learn and join the movement. The Radical CPA Community Is Here To Help You Be Radical, Too The best part about these radical professionals is that we believe in abundance. We promote and celebrate a new way of doing business and encourage the rest of the profession to move forward and change as a whole. \*\*\* Save! This book gathers the proceedings of the  
2017 DepCoS-RELCOMEX, an annual  
conference series that has been organized  
by the Department of Computer  
Engineering at the Faculty of Electronics,  
Wrocław University of Science and  
Technology, since 2006. Its mission is to  
continue the heritage of the other two  
cycles of events – the RELCOMEX  
conferences (1977–89) and Microcomputer  
Schools (1985–95) – so this year we can  
celebrate the 40th anniversary of its  
origins. In contrast to those preceding  
series, which were focused on  
conventional reliability analysis, the goal of  
DepCoS is to promote a more  
comprehensive approach to system  
performability, which is now commonly  
called dependability. This innovative  
research area provides answers to the  
latest challenges in reliability evaluation for  
contemporary complex systems. Its novelty  
is based on a multi-disciplinary approach to  
system theory, technology and  
maintenance of systems operating in real  
environments. Dependability analyses  
concentrate on the efficient completion of  
tasks, services and jobs by a system  
considered as a combination of technical,  
information and human assets, in contrast  
to “classical” reliability, which is generally  
limited to the analysis of technical  
resources and associated components and  
structures. The selection of papers for this  
volume illustrates the diversity of topics  
that need to be considered, from

---

mathematical models and design methodologies through software engineering and data security issues, to practical engineering problems in technical systems. In addition, this edition of the conference hosted the 7th CrISS-DESSERT Workshop, which was devoted to the analysis and assurance of safety and cyber security in critical infrastructure and computer systems.

Urban Vulnerability and Climate Change in Africa Routledge

Ivo of Chartres was one of the most learned scholars of his time, a powerful bishop and a major figure in the so-called 'Investiture Contest'. Christof Rolker here offers a major new study of Ivo, his works and the role he played in the intellectual, religious and political culture of medieval Europe around 1100 AD. Comparing Ivo's extensive correspondence to the contemporary canon law collections attributed to him, Dr Rolker provides a new interpretation of their authorship. Contrary to current assumptions, he reveals that Ivo did not compile the *Panormia*, showing that its compiler worked in a distinctly different mental framework from Ivo. These findings call for a reassessment of the relationship between Church reform and scholasticism and shed new light on Ivo as both a scholar and bishop.
