Concept 6.1 To study cells, biologists use microscopes and the tools of biochemistry The discovery and early study of cells progressed with the invention of microscopes in 1590 and their improvement in the 17th century. In a light microscope (LM), visible light passes through the specimen and then through glass lenses.

Chapter 6: A Tour of the Cell Concept 6.1 Biologists use microscopes and the tools of biochemistry to study cells 1. The study of cells has been limited by their small size, and so they were not seen and described until 1665, when Robert Hooke first looked at dead cells from an oak tree.
