What Everyone Needs to Know Oxford University Press

Create personal best performance at will—and revel in the achievement! If you have ever watched athletes performing at their best, you have witnessed the power of “the Zone”—that state where everything clicks and personal and team bests are the norm. In *The Winner’s Way*, Dr. Pam Brill tells readers how they, too, can achieve the Zone of top performance, turning goals—whether in the wide world of sports, work or daily life—into positive, results-driving action. With her 3 A’s—activation, attention and attitude—Dr. Brill supercedes previous wisdom by systematically bringing together these three crucial elements to hurdle personal obstacles and finish—again and again—always the winner. Out of her years of research on peak performance in sport and work, coaching to elite athletes and top corporations, and teaching at Dartmouth Medical School, Brill, a psychologist, has put together, and field tested, her unique Winner’s Way™ system. The Winner’s Way offers readers a proven, user-friendly method to identify, engage, and drive strategic change for continual achievement in the face of never-ending challenge. That racing heart and those white knuckles? They’re the result of the chemical deluge that ramps activation to high speed—but without proper 3A alignment, this power within can derail attention and attitude. Tunnel vision is no accident. Negative beliefs about self and potential will always get in the way. Plagued instead by listlessness, wandering attention, an apathetic attitude? These are all due to another chemical reaction—with symptoms readers learn to identify and then re-ramp to their best strengths. Throughout *The Winner’s Way*, Dr. Brill provides example after example so readers can adapt, according to their personal make-up, the steps to winning achievement that become second nature. On command, our readers will learn to: Change a poor attitude Pull out of a downspin Use language as an arsenal, fortress, and medic “Debrief” from experiences by identifying what was done well—and what should be done differently next time Examine and challenge habitual assumptions . . . plus deploy strategies for dealing with performance anxiety, fear of rejection, technology overload, and more to help recapture their love for the game of life. *The Winner’s Way* is straight forward, makes sense—and it works! Let the game of life begin! On your marks, get set, go!

Pandemics are large-scale epidemics that spread throughout the world. Virologists predict that the next pandemic could occur in the coming years, probably from some form of influenza, with potentially devastating consequences. Vaccinations, if available, and behavioral methods are vital for stemming the spread of infection. However, remarkably little attention has been devoted to the psychological factors that influence the spread of pandemic infection and the associated emotional distress and social disruption. Psychological factors are important for many reasons. They play a role in nonadherence to vaccination and hygiene programs, and play an important role in how people cope with the threat of infection and associated losses. Psychological factors are important for understanding and managing societal problems associated with pandemics, such as the spreading of excessive fear, stigmatization, and xenophobia that occur when people are threatened with infection. This book offers the first comprehensive analysis of the psychology of pandemics. It describes the psychological reactions to pandemics, including maladaptive behaviors, emotions, and defensive reactions, and reviews the psychological vulnerability factors that contribute to the spreading of disease and distress. It also considers empirically supported methods for addressing these problems, and outlines the implications for public health planning.

The Action Learning Handbook Cambridge University Press

A masterful dual narrative of Napoleon Bonaparte and a tiny microbe that pits the height of human ambition and achievement against the supremacy of nature, from the New York Times bestselling author of *Empire of Blue Water* “Gripping . . . Talty brings international politics and science together in a compelling story of personal hubris and humbling defeat.” —Jack Weatherford, author of the New York Times bestseller *Genghis Khan and the Making of the Modern World* In the spring of 1812, Napoleon Bonaparte was at the height of his powers. Forty-five million called him emperor, and he commanded a nation that was the richest, most cultured, and advanced on earth. No army could stand against his impeccably trained, brilliantly led forces, and his continued sweep across Europe seemed inevitable. Early that year, bolstered by his successes, Napoleon turned his attentions toward Moscow, helping the largest invasion in human history. Surely, Tsar Alexander’s outnumbered troops would crumble against this mighty force. But another powerful and ancient enemy awaited Napoleon’s men in the Russian steppes. Virulent and swift, this microscopic foe would bring the emperor’s progress to a halt. Even as the Russians retreated before him in disarray, Napoleon found his army disappearing, his frantic doctors powerless to explain what had struck down a hundred thousand soldiers. *The Illustrious Dead* delves deep into the origins of the pathogen that finally ended the mighty emperor’s dreams of world conquest and exposes this “war plague’s” hidden role throughout history. A tale of two unstoppable forces meeting on the road to Moscow in an epic clash of killer microbe and peerless army, *The Illustrious Dead* is a historical whodunit in which a million lives hang in the balance.

A Psychological Perspective Crown

The Future of Nursing explores how nurses’ roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America’s increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor’s degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses’ scope of practice -- should be removed so that the health system can reap the full benefit of nurses’ training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Writing to Save a Life Amer Psychological Assn

On the day of her father’s funeral, twenty-eight-year-old Clarissa Iverton discovers that he wasn’t her biological father after all. Her mother disappeared fourteen years earlier, and her fiancé has just revealed a life-changing secret to her. Alone and adrift, Clarissa travels to mystical Lapland, where she believes she’ll meet her real father. There, at a hotel made of ice, Clarissa is confronted with the truth about her mother’s history, and must make a decision about how—and where—to live the rest of her life.

The hidden brain is the voice in our ear when we make the most important decisions in our lives—but we’re never aware of it. The hidden brain decides whom we fall in love with and whom we hate. It tells us to vote for the white candidate and convict the dark-skinned defendant, to hire the thin woman but pay her less than the man doing the same job. It can direct us to safety when disaster strikes and move us to extraordinary acts of altruism. But it can also be manipulated to turn an ordinary person into a suicide terrorist or a group of bystanders into a mob. In a series of compulsively readable narratives, Shankar Vedantam journeys through the latest discoveries in neuroscience, psychology,

and behavioral science to uncover the darkest corner of our minds and its decisive impact on the choices we make as individuals and as a society. Filled with fascinating characters, dramatic storytelling, and cutting-edge science, this is an engrossing exploration of the secrets our brains keep from us—and how they are revealed.
