Reinforced concrete has the potential to be very durable and capable of withstanding a variety of adverse environmental conditions. However, failures in the structures do still occur as a result

of premature reinforcement corrosion. In this authoritative book the fundamental aspects of this complex process are analysed; focusing on corrosion of the reinforcing steel, and looking particularly, at new scientific and technological developments. Monitoring techniques, including the newly developed online-monitoring, are examined, as well as the numerical methods used to simulate corrosion and perform parameter studies. The influence of composition and microstructure of concrete on corrosion behaviour is explored. The second half of the book, which deals with corrosion prevention methods, starts with a discussion on stainless steels as reinforcement materials. There are

comprehensive reviews of the use of surface treatments and coatings, of the application of corrosion inhibitors and of the application of electrochemical techniques. In each case the necessary scientific fundamentals are explained and practical instances of use are looked at. This is an invaluable guide for engineers, materials scientists and researchers in the field of structural concrete. Fundamental aspects of corrosion in concrete are analysed in detail Explores how to minimise the effects of corrosion in concrete Invaluable guide for engineers, materials scientists and researchers in the field of structural concrete

This volume pulls together research on several aspects of the self. One set of chapters deals with the importance of building a self based on authenticity and "Who I really am."; a second group deals with the ways in which we defend views of the self as positive and powerful; a third group is concerned with multiple aspects of self regulation. Each of the chapters is a well-written, non-technical description of an important, currently active research program.

**Corrosion in Reinforced Concrete Structures** Kingston, Jackson P

This book considers the place and value of knowledge in contemporary society. "Knowledge" is not a self-evident concept: both its denotations and connotations are historically situated. Since the Enlightenment, knowledge has been a matter of discovery through effort, and "knowledge for its own sake" a taken-for-granted ideal underwriting progressive education as a process which not only taught "for" and "about" something, but also ennobled the soul. While this ideal has not been explicitly rejected, in recent decades there has been a tacit move away from a strong emphasis on its centrality, even in Higher Education. The authors address the values that inform knowledge production in its present forms, and seek to identify social and cultural factors that support these values. Against the background of increasingly restrictive conditions of academic work, the first section of this volume offers incisive critiques of Higher Education, with examples drawn from Australia and New Zealand. The second group of chapters considers how academics have viewed, and have tried to adapt to, present circumstances. The third section comprises papers that consider epistemological issues in the generation and promulgation of knowledge. The chapters in

this volume are indicative of the work that needs to be done so that we can come to comprehend – and perhaps try and improve – our relationship to learning and knowledge in the 21st Century. This timely book will be of particular interest to workers in higher education; it should also inform and challenge all those who have concerns for the future of the intellectual life of our civilization.

Grounded in the latest adult learning and training theories, "Show Biz Training" provides creative techniques that use comedy, props, magic, theater, and music, giving readers all the tools they need to perform the many activities found inside. The book uses specific examples and provides step-by-step instructions, resource lists, and worksheets to help trainers support and further learning by engaging emotion, building rapport, creating the proper atmosphere, and crafting lessons out of a host of entertainment-inspired ideas.
