Knowledge as Value Elsevier

This book considers the place and value of knowledge in contemporary society. “ Knowledge ” is not a self-evident concept: both its denotations and connotations are historically situated. Since the Enlightenment, knowledge has been a matter of discovery through effort, and “ knowledge for its own sake ” a taken-for-granted ideal underwriting progressive education as a process which not only taught “ for ” and “ about ” something, but also ennobled the soul. While this ideal has not been explicitly rejected, in recent decades there has been a tacit move away from a strong emphasis on its centrality, even in Higher Education. The authors address the values that inform knowledge production in its present forms, and seek to identify social and cultural factors that support these values. Against the background of increasingly restrictive conditions of academic work, the first section of this volume offers incisive critiques of Higher Education, with examples drawn from Australia and New Zealand. The second group of chapters considers how academics have viewed, and have tried to adapt to, present circumstances. The third section comprises papers that consider epistemological issues in the generation and promulgation of knowledge. The chapters in this volume are indicative of the work that needs to be done so that we can come to comprehend – and perhaps try and improve – our relationship to learning and knowledge in the 21st Century. This timely book will be of particular interest to workers in higher education; it should also inform and challenge all those who have concerns for the future of the intellectual life of our civilization.

Porter's five forces analysis is a framework for analyzing the level of competition within an industry and business strategy development. It draws upon industrial organization (IO) economics to derive five forces that determine the competitive intensity and therefore the attractiveness of an industry. Attractiveness in this context refers to the overall industry profitability. An "unattractive" industry is one in which the combination of these five forces acts to drive down overall profitability. A very unattractive industry would be one approaching "pure competition," in which available profits for all firms are driven to normal profit. This analysis is associated with its principal innovator Michael E. Porter of Harvard University. This updated and expanded second edition of Book provides a user-friendly introduction to the subject, Taking a clear structural framework, it guides the reader through the subject's core elements. A flowing writing style combines with the use of illustrations and diagrams throughout the text to ensure the

Ian Gambles' *Making the Business Case* shows you how to make sense of the task at hand, develop a strategy, articulate your options, define the benefits, establish the costs, identify the risks and make a compelling case. Just as with the best business cases, the text is concise, jargon-free and easy to read; illustrated throughout with practical examples drawn from real cases and including reflective exercises at the end of each chapter to help you consolidate what you have learned. At only 198 pages long, this is a jewel of a book; essential reading for the manager tasked with making the business case, the senior manager who needs to understand and test it, and the project manager who is responsible for delivering whatever is agreed on.
