The tourism industry, of which the hospitality industry is the core element, is one of the largest and the fastest growing industries world-wide. According to World Tourism Organisation forecasts, the industry will continue to grow and employ more people in the twenty-first century. In parallel with the growth of the tourism and hospitality industry world-wide, consumer expectations and demands for quality are rising while consumer tastes are varying on the one hand, and competition among the firms, both nationally and internationally, is intensifying on the other. In this business environment of heightened consumer expectations, distinct market segments that demand unique products and services, and stiff competition, tourism and hospitality organisations are looking for ways to excel in service quality, customer satisfaction, competition and performance. This book takes the view that employees are one of the most, if not the most, important resources or assets for tourism and hospitality organisations in their endeavour to provide excellent service, meet and exceed consumer expectations, achieve competitive advantage and exceptional organisational performance. The purpose of this book is to emphasise the critical role of employees for tourism

and hospitality organisations and to examine the ways and means of managing their attitudes and behaviours for the mutual benefit of both parties: tourism and hospitality organisations and their employees.

This volume presents authoritative and up-to-date research in colour studies by specialists across a wide range of academic disciplines, including vision science, psychology, psycholinguistics, linguistics, anthropology, onomastics, philosophy, archaeology and design. The chapters have been developed from papers and posters presented at the Progress in Colour Studies (PICS2016) conference held at University College London in September 2016. The book continues the series from the earlier PICS conferences, which have become renowned for their insights into colour in language and cognition. In the present book all chapters have been rigorously peer-reviewed and revised to ensure the highest standards throughout. The chapters are grouped into three sections: Colour Perception and Cognition; The Language of Colour; and The Diversity of Colour. Each section is preceded by a short introduction drawing together the themes of its chapters. There are over 120 colour illustrations.

*Post-polio Syndrome* University Press of Florida

The effects of polio that occur decades after the disease has run its course--weakness, fatigue, pain, intolerance to cold, difficulty with breathing and swallowing--are often more devastating than the original disease. *The Science of Subjective Well-Being* Longman Publishing Group  
There is a paradox when it comes to Darwinian ideas within the academy. On one hand, Darwin's theories have famously changed the foundational ideas related to the origins of life, shaping entire disciplines in the biological sciences. On the other hand, people in educated societies across the globe today are famously misinformed and uneducated about Darwinian principles and ideas. Applications of evolutionary theory outside the traditional areas of biology have been slow to progress, and scholars doing such work regularly run into all kinds of political backlash. However, a slow but steady push to advance the teaching of evolution across academic disciplines has been under way for more than a decade. This book serves to integrate the vast literature in the interdisciplinary field of Evolutionary Studies (EvoS), providing clear examples of how evolutionary concepts relate to all facets of life. Further, this book provides chapters dedicated to the processes associated with an EvoS education, including examples of how an interdisciplinary approach to evolutionary theory has been implemented successfully at various colleges, universities, and degree programs. This book also offers chapters outlining a variety of applications to an evolution education, including improved sustainable development, medical practices, and creative and critical thinking skills. Exploring controversies surrounding evolution education, this volume provides a roadmap to asking and answering Darwinian questions across all areas of intellectual inquiry.
