Velocity is a Java-based template engine. It permits anyone to use a simple yet powerful template language to reference objects defined in Java code. When Velocity is used for web development, Web designers can work in parallel with Java programmers to develop web sites according to the Model-View-Controller (MVC) model, meaning that web page designers can focus solely on creating a

---

site that looks good, and programmers can focus solely on writing top-notch code.

*Apache Velocity Developer Guide*

Apache Velocity is a Java -based template engine that provides a template language to reference objects defined in Java code. It aims to ensure clean separation between the presentation tier and business tiers in a Web application (the model-view-controller design pattern).

This guide explains how to setup and configure a VelocityViewServlet which can render the views of a Struts-based web application. The servlet will create a VelocityEngine to render \*.vm (velocity template) files using contextual information provided by a Struts Controller action. A set of built-in tools have been created which provide the same functions as the Struts JSP Tag libraries for Tiles, Validator, forms, links, messages, and errors.
