Spanning over a century of cinema and comprised of 127 films, this book analyzes the cinematic incarnations of the "uncanniest place on earth"--wax museums. Nothing is as it seems at a wax museum. It is a place of wonder, horror and mystery. Will the figures come to life at night, or are they very much dead with corpses hidden beneath their waxen shells? Is the genius hand that molded them secretly scarred by a terrible tragedy, longing for revenge? Or is it a sinner's sanctum, harboring criminals with countless places to hide in plain sight? This chronological analysis includes essential behind the scenes information in addition to authoritative research comparing the creation of "real" wax figures to the "reel" ones seen onscreen. Publicly accessible or hidden away in a maniac's lair, wax museums have provided the perfect settings for films of all genres to thrillingly play out on the big screen since the dawn of cinema.

Inspiring the global fight to revolutionize the way food is grown, distributed, and eaten. In the almost thirty years since Carlo Petrini began the Slow Food organization, he has been constantly engaged in the fight for food justice. Beginning first in his native Italy and then expanding all over the world, the movement has created a powerful force for change. The essential argument of this book is that food is an avenue towards freedom. This uplifting and humanistic message is straightforward: if people can feed themselves, they can be free. In other words, if people can regain control over access to their food—how it is produced, by whom, and how it is distributed—then that can lead to a greater empowerment in all channels of life. Whether in the Amazon jungle talking with tribal elders or on rice paddies in rural Indonesia, the author engages the reader through the excitement of his journeys and the passion of his mission. Here, Petrini reports upon some of the success stories that he has observed firsthand. From Chiapas to Puglia, Morocco to North Carolina, he has witnessed the many ways different peoples have dealt with food problems. This book allows us to learn from these case studies and lays out models for the future.

AVO (SEG Investigations in Geophysics No. 16) by Satinder Chopra and John Castagna begins with a brief discussion on the basics of seismic-wave propagation as it relates to AVO, followed by a discussion of the rock-physics foundation for AVO analysis including the use of Gassmann's equations and fluid substitution. Then, the early seismic observations and how they led to the birth of AVO analysis are presented. The various approximations for the Zoeppritz equations are examined, and the assumptions and limitations of each approximation are clearly identified. A section on the factors that affect seismic amplitudes and a discussion of the processing considerations important for AVO analysis are included. A subsequent section explores the various techniques used in AVO interpretation. Finally, topics including the influence of anisotropy in AVO analysis, the use of AVO inversion, estimation of uncertainty in AVO analysis, converted-wave AVO, and the future of the AVO method are discussed. Equally helpful to new entrants into the field as well as to seasoned workers, AVO will provide readers with the most up-to-date knowledge on amplitude variation with offset.

This is the second volume focused on geoethics published by the Geological Society of London. This is a significant step forward in which authors address the maturation of geoethics. The field of geoethics is now ready to be introduced outside the geoscience community as a logical platform for global ethics that addresses anthropogenic changes. Geoethics has a distinction in the geoscientific community for discussing ethical, social and cultural implications of geoscience knowledge, research, practice, education and communication. This provides a common ground for confronting ideas, experiences and proposals on how geosciences can supply additional service to society in order to improve the way humans interact responsibly with the Earth system. This book provides new messages to geoscientists, social scientists, intellectuals, law- and decision-makers, and laypeople. Motivations and actions for facing global anthropogenic changes and their intense impacts on the planet need to be governed by an ethical framework capable of merging a solid conceptual structure with pragmatic approaches based on geoscientific knowledge. This philosophy defines geoethics.

Monomers composed of carbon and hydrogen atoms are the simple building blocks that make up polyolefins - molecules which are extremely useful and which have an extraordinary range of properties and applications. How these monomer molecules are connected in the polymer chain defines the molecular architecture of polyolefins. Written by two world-renowned authors pooling their experience from industry and academia, this book adopts a unique engineering approach using elegant mathematical modeling techniques to relate polymerization conditions, reactor and catalyst type to polyolefin properties. Readers thus learn how to design and optimize polymerization conditions to produce polyolefins with a given microstructure, and how different types of reactors and processes are used to create the different products. Aimed at polymer chemists, plastics technologists, process engineers, the plastics industry, chemical engineers, materials scientists, and company libraries.

The Historie of the World. In five bookes ... by Sir Walter Raleigh, Knight Penguin UK

In recent years, Peru has transformed from a war-torn country to a global high-end culinary destination.

Connecting chefs, state agencies, global capital, and Indigenous producers, this “gastronomic revolution” makes powerful claims: food unites Peruvians, dissolves racial antagonisms, and fuels development. *Gastropolitics and the Specter of Race* critically evaluates these claims and tracks the emergence of Peruvian gastropolitics, a biopolitical and aesthetic set of practices that reinscribe dominant racial and gendered orders. Through critical readings of high-end menus and ethnographic analysis of culinary festivals, guinea pig production, and national-branding campaigns, this work explores the intersections of race, species, and capital to reveal links between gastronomy and violence in Peru.

Now a major motion picture starring Cole Sprouse and Haley Lu Richardson! Goodreads Choice Winner, Best Young Adult Fiction of 2019 In this #1 New York Times bestselling novel that's perfect for fans of John Green's *The Fault in Our Stars*, two teens fall in love with just one minor complication—they can't get within a few feet of each other without risking their lives. Can you love someone you can never touch? Stella Grant likes to be in control—even though her totally out of control lungs have sent her in and out of the hospital most of her life. At this point, what Stella needs to control most is keeping herself away from anyone or anything that might pass along an infection and jeopardize the possibility of a lung transplant. Six feet apart. No exceptions. The only thing Will Newman wants to be in control of is getting out of this hospital. He couldn't care less about his treatments, or a fancy new clinical drug trial. Soon, he'll turn eighteen and then he'll be able to unplug all these machines and actually go see the world, not just its hospitals. Will's exactly what Stella needs to stay away from. If he so much as breathes on Stella she could lose her spot on the transplant list. Either one of them could die. The only way to stay alive is to stay apart. But suddenly six feet doesn't feel like safety. It feels like punishment. What if they could steal back just a little bit of the space their broken lungs have stolen from them? Would five feet apart really be so dangerous if it stops their hearts from breaking too?

This textbook provides an overview of the origin and preservation of carbonate sedimentary rocks. The focus is on limestones and dolostones and the sediments from which they are derived. The approach is general and universal and draws heavily on fundamental discoveries, arresting interpretations, and keystone syntheses that have been developed over the last five decades. The book is designed as a teaching tool for upper level undergraduate classes, a fundamental reference for graduate and research students, and a scholarly source of information for practicing professionals whose expertise lies outside this specialty. The approach is rigorous, with every chapter being designed as a separate lecture on a specific topic that is encased within a larger scheme. The text is profusely illustrated with all colour diagrams and images of rocks, subsurface cores, thin sections, modern sediments, and underwater seascapes. Additional resources for this

The Lazy Genius Way John Wiley & Sons

It has long been recognized that science is the pursuit of knowledge, knowledge is power, and power is political. However, the fantasy of science being apolitical is a hallmark legacy of the enlightenment era, an era that romanticized pursuit of knowledge, disconnected from the baggage of power, politics, and dogmatic assertions. Yet, while the age of information has exponentially increased our access to knowledge, we can see, as clearly as ever, that scientific knowledge is neither apolitical nor dogma-free, and it certainly is not disconnected from power. It is hard to imagine another era when the separation between science and politics has been this blurred as it is today. At the same time, it is true that no other topic than climate change has been so politically charged, with one side dominating the scientific narration and branding anyone opposing the mainstream as a “climate change denier,” and the other standing in staunch defiance that climate change exists. In an age of political and scientific turmoil, how can we navigate our way to coming towards a more objective understanding of the scientific issues surrounding the climate change debate? This book presents the current debate of climate change as scientifically futile, on both sides of the scientific, and often, political, spectrum. The climate change debate has become like obesity, cancer, diabetes or opioid addiction, which is to say that the debate should not be if these maladies exist, but rather, what causes them. Instead of looking for the cause and making adjustments to remove those causes from our lifestyle, a combination of the capitalist drive towards mass production and a lack of identifying the roots of the problems, new solutions, or substitutes, have been proposed as “quick fixes” to the problems. This book identifies the root causes of climate change and shows that climate change is real and it is also preventable, but that it can be reversed only if we stop introducing pollutants in the ensuing greenhouse gases. The book brings back common sense and grounds scientists to the fundamentals of heat and mass transfer, while at the same time disconnecting politicking and hysteria from true scientific analysis of the phenomenon of global climate.
