This book collects contributions which showcase the impact of new augmented reality (AR) and artificial intelligence (AI) technologies considered jointly in the fields of cultural heritage and innovative design. AR is an alternative path of analysis and communication if applied to several fields of research, in particular if related to space and artifacts in it. This happens because the neural network development strengthens the relationship between augmented reality and artificial intelligence, creating processes close to human thought in shorter times. In the last years, the AR/AI expansion and the future scenarios have raised a deep trans-disciplinary speculation. The disciplines of representation (drawing, surveying, visual communication), as a convergence place of multidisciplinary theoretical and applicative studies related to architecture, city, environment, tangible and intangible cultural heritage, are called to

contribute to the international debate. The book chapters deal with augmented reality and artificial intelligence, analyzing their connections as research tools for knowing the environment. In particular, the topics focus on the intersection between real and virtual world and on the heuristic role of drawing in the enhancement and management of cultural heritage, in planning and monitoring the architecture, the environment, or the infrastructures. Scientists involved in AR and AI research applied separately or together in the field of cultural heritage, architectural design, urban planning, and infrastructures analysis, as well as members of public and private organizations make up interdisciplinary groups that fuel the discussion focusing on the priorities and aims of the research related to the disciplines of representation.

In 1871, a tiny nation, just four years old—it's population well below the 4 million mark—determined that it would build the world's longest railroad across empty country, much of it unexplored. This decision—bold to the point of recklessness—was to change the lives of every man, woman and child in Canada and alter the shape of the nation. Using primary sources—diaries, letters, unpublished manuscripts, public documents and newspapers—Pierre Berton has reconstructed the incredible decade of the 1870s, when Canadians of every stripe—contractors,

politicians, financiers, surveyors, workingmen, journalists and entrepreneurs—fought for the railway, or against it. The National Dream is above all else the story of people. It is the story of George McMullen, the brash young promoter who tried to blackmail the Prime Minister; of Marcus Smith, the crusty surveyor, so suspicious of authority he thought the Governor General was speculating in railway lands; of Sanford Fleming, the great engineer who invented Standard Time but who couldn't make up his mind about the best route for the railway. All these figures, and dozens more, including the political leaders of the era, come to life with all their human ambitions and failings.

This book examines common issues and concepts concerning women in non-traditional, male dominated occupations. It explores the question of whether these women are the agents of change or are instead changed themselves. It provides a statistical examination and theoretical analysis of occupational sex segregation in the UK, the rest of the European Union, and the USA. Then, it provides a more in-depth understanding of women's work lives through the experiences of the women themselves in four occupations; management, academia, engineering and the priesthood.

In recent years, Peru has transformed from a war-torn country to a global high-end culinary destination. Connecting chefs, state agencies, global capital, and Indigenous producers, this “gastronomic revolution” makes powerful claims: food unites Peruvians, dissolves racial antagonisms, and fuels development. *Gastropolitics and the Specter of Race* critically evaluates these claims and tracks the emergence of Peruvian gastropolitics, a biopolitical and aesthetic set of practices that reinscribe dominant racial and gendered orders. Through critical readings of high-end menus and ethnographic analysis of culinary festivals, guinea pig production, and national-branding campaigns, this work explores the intersections of race, species, and capital to reveal links between gastronomy and violence in Peru.

Culture and creativity have untapped potential to deliver social, economic, and spatial benefits for cities and communities. Cultural and creative industries are key drivers of the creative economy and represent important sources of employment, economic growth, and innovation, thus contributing to city competitiveness and sustainability. Through their contribution to urban regeneration and sustainable

urban development, cultural and creative industries make cities more attractive places for people to live in and for economic activity to develop. Culture and creativity also contribute to social cohesion at the neighborhood level, enable creative networks to form and advance innovation and growth, and create opportunities for those who are often socially and economically excluded. The ongoing COVID-19 pandemic has had a deep impact on the cultural sector, yet it has also revealed the power of cultural and creative industries as a resource for city recovery and resilience. More generally, cities are hubs of the creative economy and have a critical role to play in harnessing the transformative potential of cultural and creative industries through policies and enabling environments at the local level. 'Cities, Culture, and Creativity' (CCC) provides guiding principles and a CCC Framework, developed by UNESCO and the World Bank, to support cities in unlocking the power of cultural and creative industries for sustainable urban development, city competitiveness, and social inclusion. Drawing from global studies and the experiences of nine diverse cities from across the world, the CCC Framework offers concrete guidance for the range of actors -- city, state, and national governments; creative industry and related private-sector organizations; creatives; culture professionals and civil society-- to harness culture and creativity with a view to boosting their local creative economies and building resilient, inclusive, and dynamic cities.

The heart of the biblical understanding of idolatry, argues Gregory Beale, is that we take on the characteristics of what we worship. Employing Isaiah 6 as his interpretive lens, Beale demonstrates that this understanding of idolatry permeates the whole canon, from Genesis to Revelation. Beale concludes with an application of the biblical notion of idolatry to the challenges of contemporary life.

It has long been recognized that science is the pursuit of knowledge, knowledge is

power, and power is political. However, the fantasy of science being apolitical is a hallmark legacy of the enlightenment era, an era that romanticized pursuit of knowledge, disconnected from the baggage of power, politics, and dogmatic assertions. Yet, while the age of information has exponentially increased our access to knowledge, we can see, as clearly as ever, that scientific knowledge is neither apolitical nor dogma-free, and it certainly is not disconnected from power. It is hard to imagine another era when the separation between science and politics has been this blurred as it is today. At the same time, it is true that no other topic than climate change has been so politically charged, with one side dominating the scientific narration and branding anyone opposing the mainstream as a "climate change denier," and the other standing in staunch defiance that climate change exists. In an age of political and scientific turmoil, how can we navigate our way to coming towards a more objective understanding of the scientific issues surrounding the climate change debate? This book presents the current debate of climate change as scientifically futile, on both sides of the scientific, and often, political, spectrum. The climate change debate has become like obesity, cancer, diabetes or opioid addiction, which is to say that the debate should not be if these maladies exist, but rather, what causes them. Instead of looking for the cause and making adjustments to remove those causes from our lifestyle, a combination of the capitalist drive towards mass production and a lack of identifying the roots of the problems, new solutions, or substitutes, have been proposed as "quick fixes" to the problems. This book identifies the root causes of climate change and shows that climate change is real and it is also preventable, but that it can be reversed only if we stop introducing pollutants in the ensuing greenhouse gases. The book brings back common sense and grounds scientists to the fundamentals of heat and mass transfer, while at the same time disconnecting politicking and hysteria from true scientific analysis of the phenomenon of global climate.

**Six Degrees of Freedom** Springer Nature AVO (SEG Investigations in Geophysics No. 16) by Satinder Chopra and John Castagna begins with a brief discussion on the basics of seismic-wave propagation as it relates to AVO, followed by a discussion of the rock-physics foundation for AVO analysis including the use of Gassmann's equations and fluid substitution. Then, the early seismic observations and how they led to the birth of AVO analysis are presented. The various approximations for the Zoeppritz equations are examined, and the assumptions and limitations of each approximation are clearly identified. A section on the factors that affect seismic amplitudes and a discussion of the processing considerations important for AVO analysis are included. A subsequent section explores the various techniques used in AVO interpretation. Finally, topics including the influence of anisotropy in AVO analysis, the use of AVO inversion, estimation of uncertainty in AVO analysis, converted-wave AVO, and the future of the AVO method are discussed. Equally helpful to new entrants into the field as well as to seasoned workers, AVO will provide readers with the most up-to-date knowledge on amplitude variation with offset.
