Big Ideas Math Integrated Mathematics II Simon & Schuster Books for Young Readers A Calculus text which begins with the basic concepts of integration, then covers techniques and applications of integration, followed by sequences and series. This book contains numerous examples and illustrations to help make concepts clear. This is the second text of a series; Calculus 1 covers limits, derivatives and the basics of integration. Calculus 3 finishes this series by covering parametric equations, polar coordinates, vector valued functions, multivariable functions and vector analysis. A free .pdf version of all three can be obtained at apexcalculus.com Journal of the Adventures of a Party of California Gold-seekers Kaplan Publishing " Pollan keeps you turning the pages . . . cleareyed and assured. " —New York Times A #1 New York Times Bestseller, New York Times Book Review 10 Best Books of 2018, and New York Times Notable Book A brilliant and brave investigation into the medical and scientific revolution taking place around psychedelic drugs--and the spellbinding story of his own life-changing psychedelic experiences When Michael

Pollan set out to research how LSD and psilocybin (the active ingredient in magic mushrooms) are being used to provide relief to people suffering from difficult-to-treat conditions such as depression, addiction and anxiety, he did not intend to write what is undoubtedly his most personal book. But upon discovering how these remarkable substances are improving the lives not only of the mentally ill but also of healthy people coming to grips with the challenges of everyday life, he decided to explore the landscape of the mind in the first person as well as the third. Thus began a singular adventure into various altered states of consciousness, along with a dive deep into both the latest brain science and the thriving underground community of psychedelic therapists. Pollan sifts the historical record to separate the truth about these mysterious drugs from the myths that have surrounded them since the 1960s, when a handful of psychedelic evangelists inadvertently catalyzed a powerful backlash against what was then a promising field of research. A unique and elegant blend of science, memoir, travel writing, history, and medicine, *How to Change Your Mind* is a triumph of participatory journalism. By turns dazzling and edifying, it is the gripping account of a journey to an

exciting and unexpected new frontier in our understanding of the mind, the self, and our place in the world. The true subject of Pollan's "mental travelogue" is not just psychedelic drugs but also the eternal puzzle of human consciousness and how, in a world that offers us both suffering and joy, we can do our best to be fully present and find meaning in our lives.

McGraw-Hill Education

Macroeconomics in Context

lays out the principles of macroeconomics in a manner that is thorough, up to date, and relevant to students. Like its

counterpart,

Macroeconomics in Context, the book is attuned to economic realities--and it has

a bargain price. The in

Context books offer

affordability, engaging treatment of high-interest topics from sustainability to financial crisis and rising inequality, and clear,

straightforward presentation of economic theory. Policy

issues are presented in

context--historical, institutional, social, political,

and ethical--and always with reference to human well-being.

Core Connections Pearson Precalculus is adaptable and designed to fit the needs of a variety of precalculus courses. It is a comprehensive text that covers more ground than a typical one- or two-semester college-level precalculus course. The content is organized by clearly-defined learning objectives, and includes worked examples that demonstrate problem-solving approaches in an accessible way. Coverage and Scope Precalculus contains twelve chapters, roughly divided into three groups.

Chapters 1-4 discuss various types of functions, providing a foundation for the remainder of the course. Chapter 1: Functions Chapter 2: Linear Functions Chapter 3: Polynomial and Rational Functions Chapter 4: Exponential and Logarithmic Functions Chapters 5-8 focus on Trigonometry. In Precalculus, we approach trigonometry by first introducing angles and the unit circle, as opposed to the right triangle approach more commonly used in College Algebra and Trigonometry courses. Chapter 5:

Trigonometric Functions Chapter

6: Periodic Functions Chapter 7:

Trigonometric Identities and Equations Chapter 8: Further

Applications of Trigonometry

Chapters 9-12 present some advanced Precalculus topics that

build on topics introduced in chapters 1-8. Most Precalculus syllabi include some of the topics in these chapters, but few include all. Instructors can select material as needed from this group of

chapters, since they are not cumulative. Chapter 9: Systems of Equations and Inequalities
Chapter 10: Analytic Geometry
Chapter 11: Sequences, Probability and Counting Theory
Chapter 12: Introduction to Calculus

Revising Knowledge Council for Economic Education

This in-depth preparation for both AP economics exams provides a detailed review of all test topics.

Includes two full-length practice tests--one in Microeconomics and one in Macroeconomics-- with all test questions answered and explained.
