This book highlights the latest
advances in waste management,

resource recovery and resource circulation in various countries, with a special emphasis on India. It leads the way towards a sustainable circular economy developing local economy and enhances the sustainability of the energy sector as a whole by holistically addressing waste management. Waste management is a major problem around the globe; effective waste disposal is one of the most plaguing issues faced by

municipalities. Yet waste can also serve as a major source of energy rather than a disposable material. The book discusses various upstream and downstream aspects of waste management systems, e.g. conversion processes and collection methods, that are needed in order to make waste management systems into an effective industry and move closer to a circular economy. It also provides information on management tools for analysis and decision support. All chapters included here are based on high-quality research papers presented at the conference IconSWM 2018.

This book presents
different aspects of
renewable energy
integration, from the
latest developments in
renewable energy
technologies to the
currently growing smart
grids. The importance of
different renewable
energy sources is
discussed, in order to
identify the advantages
and challenges for each
technology. The rules of
connecting the renewable

energy sources have also
been covered along with
practical examples. Since
solar and wind energy are
the most popular forms of
renewable energy
sources, this book
provides the challenges of
integrating these
renewable generators
along with some
innovative solutions. As
the complexity of power
system operation has
been raised due to the
renewable energy
integration, this book also
includes some analysis to
investigate the
characteristics of power
systems in a smarter way.
This book is intended for
those working in the area
of renewable energy

This book provides an insight in the phenomenon of Mergers and Acquisitions (M&A), including the various forms of corporate restructuring. It highlights the importance of M&A as a strategy for faster growth in the corporate. The book provides an enriched experience of the art of valuation with detailed description of M&A process, deal structuring and financing. The book also provides the broader perspective of Accounting and Regulatory aspects of M&A. While covering the conceptual underpinnings of M&A, the book supplements it with real life examples on each sub-topic with various numeric examples. Thus the judicious blend of theory and practical aspects, through numerical as well as real life case-studies, make the book a source of vast knowledge in the

complicated and dynamic world of M&A.

This book analyzes contemporary issues relating to energy, environment, and globalization in the Indian context. As a signatory to the Paris climate accord, India has reiterated its commitment to taking strong and positive steps toward climate change mitigation. However, as one of the fastest growing economies in the world, it is battling the effects of a steep rise in fossil fuel usage and pollution. Further, increasing globalization is leading to greater economic activity and production, resulting in additional energy use, which has a negative effect on the environment. The book argues that globalization need not have only a negative environmental impact; it can also have positive impact through the importation of

environmentally sound technologies and implementing global compliance standards. The book is divided into three sections: The energy section discusses issues relating to the status of Indian natural gas market and the need for developing an efficient gas market in India; the economics and politics of sustainable energy in India; the challenges of thermal power and significance of clean thermal power generation in India; environmental and policy issues concerning energy use in urban India; the importance of energy use in developing Human Development Index (HDI); and issues relating to renewable energy in India. The environment section then examines topics such as the impact of global warming on local weather by examining the frequency of extreme weather events such as drought and floods, and their impact on farming activities in the Indian state of Odisha; the importance of according the

economic value to environmentally significant things like national park , mangroves, etc. for sustainable development; the role of environmental accounting for ecological sustainability and ecotourism; and environmental concerns increasingly gaining traction among the corporate sector for their long-run benefits . Lastly, the third section addresses issues relating to the challenges and opportunities of globalization, such as the interface between globalization and environment; managing India's business interest in proposing new Bilateral Investment Treaty (BIT); the challenges being faced by Indian exports and their revival; and making Indian SMEs competitive. As such, it is an invaluable resource for policymakers, researchers, practitioners and students in the field of energy, environment and trade economics.

Benjamin-Cummings Publishing Company
During the 1990s, a new paradigm for power sector reform was put forward emphasizing the restructuring of utilities, the creation of regulators, the participation of the private sector, and the establishment of competitive power markets. Twenty-five years later, only a handful

of developing countries have fully implemented these Washington Consensus policies. Across the developing world, reforms were adopted rather selectively, resulting in a hybrid model, in which elements of market orientation coexist with continued state dominance of the sector. This book aims to revisit and refresh thinking on power sector reform approaches for developing countries. The approach relies heavily on evidence from the past, drawing both on broad global trends and deep case material from 15 developing countries. It is also forward looking, considering the implications of new social and environmental policy goals, as well as the

emerging technological disruptions. A nuanced picture emerges. Although regulation has been widely adopted, practice often falls well short of theory, and cost recovery remains an elusive goal. The private sector has financed a substantial expansion of generation capacity; yet, its contribution to power distribution has been much more limited, with efficiency levels that can sometimes be matched by well-governed public utilities. Restructuring and liberalization have been beneficial in a handful of larger middle-income nations but have proved too complex for most countries to implement. Based on these findings, the report points to three major policy implications.

First, reform efforts need to be shaped by the political and economic context of the country. The 1990s reform model was most successful in countries that had reached certain minimum conditions of power sector development and offered a supportive political environment. Second, countries found alternative institutional pathways to achieving good power sector outcomes, making a case for greater pluralism. Among the top performers, some pursued the full set of market-oriented reforms, while others retained a more important role for the state. Third, reform efforts should be driven and tailored to desired policy outcomes and less preoccupied with following

a predetermined process, particularly since the twenty-first-century century agenda has added decarbonization and universal access to power sector outcomes. The Washington Consensus reforms, while supportive of the twenty-first-century century agenda, will not be able to deliver on them alone and will require complementary policy measures

Engineering VOLUME-1

McGraw-Hill Education

This multidisciplinary volume articulates the current and potential public policy discourse between energy security and climate change in the Asia-Pacific region, and the efforts taken to address global warming.

This volume is unique as it analyses two important

issues climate change and energy security through the lens of geopolitics at the intersection of energy security. It elaborates on the current and potential steps taken by state and non-state actors, as well as the policy innovations and diplomatic efforts (bilateral and multilateral, including regional) that states are pursuing. This Brief stems from the assumption that its audience is aware of the consequences of climate change, and will therefore, only look at the issues identified. It provides a useful read and reference for a wide-range of scholars, policymakers, researchers and post-graduate students.
