Emergency Triage: Telephone Triage and Advice complements the highly successful Emergency Triage. The algorithms are rooted in the Manchester Triage System (MTS), which is used in hospitals around the world and which is acknowledged as an effective means of clinical prioritisation. This telephone iteration of a triage system which prioritises millions of patients each year provides a robust, safe, evidence-based system for managing the clinical risk in patients who are at a distance from health care providers. The basic principles that drive the MTS remain, but this book addresses the specific difficulties of assessment by telephone. The possible triage outcomes are "face-to-face now", "face-to-face soon" and "face-to-face later" together with a self-care option. Information and advice is suggested at every level. The advice ranges from life-saving interventions, which can be carried out until health care arrives, to self-care instructions. Emergency Triage: Telephone Triage and Advice provides all the

necessary information that telephone triage staff must have to hand as well as including examples of questions to be asked. It will be a valuable resource for staff working in emergency departments, health centres and telephone triage organisations. Furthermore hospitals that are already using Emergency Triage will benefit from being linked with a telephone triage system that follows the same protocols. Updated to Version 1.7 in 2023.

Have you struggled to find information on diathermy, ventilation, types of anaesthetic, what the

anaesthetist does, or problems with positioning - the little bits other books leave out? If so, then this is the book for you, anaesthetics tailored specifically to the MRCS syllabus. The book is presented in three sections. The first focuses on applied basic sciences for the surgeon. The second discusses perioperative care and specific considerations that arise in the surgical specialties from both the surgical and anaesthetic viewpoint. Each chapter is written by clinical specialists in surgery and anaesthesia, with up-to-date information on topics including damage limitation surgery in trauma, transfusion practice, CPET testing, and enhanced recovery. The third section, 'At a Glance', is written in an easily accessible, brief format for revision or reference. Topics covered include post-operative cognitive dysfunction, coagulation, fluids and scoring systems. This is an essential text for all surgical trainees.
