APOLLO 13: Houston We Have A Problem -
The True Story of the Apollo 13 Disaster
Those that are familiar with Apollo 13 know that it was the seventh installment of the Apollo space program. It was classified as a manned mission by NASA as well as the third mission with the intention of landing on the moon, though it never actually succeeded in the lunar landing as it was aborted due to an oxygen tank explosion. On April 11th of 1970, the Apollo 13 craft was sent to launch at 13:13 CST, or 19:13 UTC. It originated from the Kennedy Space Center in Florida. The incident that caused its mission to fail happened two days into the endeavor, and it crippled the Service Module. This was vitally important for the proper functioning of the Command Module. Other hardships that had to be battled during flight included loss of cabin heat, a limited supply of power, a critical need for makeshift repairs to the system that removed carbon dioxide from the craft, and a shortage of potable water. Despite all of these things, the crew was able to safely return to Earth six days after they launched, on the 17th of April. This is the incredible story of the Apollo 13 disaster, and the breathtaking, miraculous turnaround that saw the entire crew return safe and well.

NASA Apollo 13 Lunar Landing Mission Manual HarperCollins

As a child, Katherine Johnson loved to count. She counted the steps on the road, the number of stars in the sky, the number of dishes and spoons she washed in the kitchen sink. Boundless, curious, and excited by calculations, young Katherine longed to know as much as she could about math, about the universe. From Katherine's early beginnings as a gifted student to her heroic accomplishments as a prominent mathematician at NASA, this is the story of a ground-breaking American icon who not only calculated the course of moon landings but, in turn, saved lives. I have had the privilege of being an engineer who worked on both the Apollo and Space Shuttle Orbiter Programs for more than 45 years. It has been a fascinating and rewarding experience, along with its share of pressures and disappointments. Come take this exciting journey with me. In this book I present the contributions of 30 key scientists who, over a period of 2500 years, made the Moon visit possible in my lifetime. I review the birth of the Space Age, early Russian dominance in the sixties, and the successful landing on the Moon. The details of the failure analyses of the Apollo Fire, which cost the lives of three Apollo astronauts, are presented, along with the corrective actions taken. I cover the contribution of the Mercury and Gemini programs, the details of the design of the Apollo and the greatest material challenges we

faced. The book also describes the Lunar Module; without its concept, we may have never made the Moon landings. The book also details how we beat the Russians to the Moon, covers all Apollo missions, and how we saved the Apollo 13 astronauts. Finally, I present what I consider to be the Apollo legacy. This book presents the details of the building of the Space Shuttle Orbiter and the crucial development of its heat shield. It also points out key failures that had to be resolved. Included is a Chapter on the Russian Space Shuttle, the Buran, comparing it to the Space Shuttle Orbiter. The book covers the failure of the Challenger Spacecraft and what went wrong, as well as how we determined the cause of the Columbia Spacecraft failure. It also discusses the science of reentry of the Space Shuttle Orbiter, the future of manned space, and the legacy of the Space Shuttle. This book is a detailed documentary of the American's manned space programs. Read on and enjoy!

'Terrific and enthralling' New Scientist Fifty years ago, in July 1969, Apollo 11 became the first manned mission to land on the Moon, and Neil Armstrong the first man to step on to its surface. He and his crewmates, Buzz Aldrin and Michael Collins, were the latest men to risk their lives in this extraordinary scientific, engineering and human venture that would come to define the era. In Apollo 11: The Inside Story, David Whitehouse reveals the true drama behind the mission, putting it in the context of the wider space race and telling the story in the words of those who took part – based around exclusive interviews with the key players. This enthralling book takes us from the early rocket pioneers to the shock America received from the Soviets' launch of the first satellite, Sputnik; from the race to put the first person into space to the iconic Apollo 11 landing and beyond, to the agonising drama of the Apollo 13 disaster and the eventual winding-up of the Apollo program. Here is the story as told by the crew of Apollo 11 and the many others who shared in their monumental endeavour. Astronauts, engineers, politicians, NASA officials, Soviet rivals – all tell their own story of a great moment of human achievement.

NEW YORK TIMES BESTSELLER • The riveting inside story of three heroic astronauts who took on the challenge of mankind's historic first mission to the Moon, from the bestselling author of Shadow Divers. "Robert Kurson tells the tale of Apollo 8 with novelistic detail and immediacy." —Andy Weir, #1 New York Times bestselling author of The Martian and Artemis By August 1968, the American space program was in danger of failing in its two most important objectives: to

land a man on the Moon by President Kennedy's end-of-decade deadline, and to triumph over the Soviets in space. With its back against the wall, NASA made an almost unimaginable leap: It would scrap its usual methodical approach and risk everything on a sudden launch, sending the first men in history to the Moon—in just four months. And it would all happen at Christmas. In a year of historic violence and discord—the Tet Offensive, the assassinations of Martin Luther King, Jr., and Robert Kennedy, the riots at the Democratic National Convention in Chicago—the Apollo 8 mission would be the boldest, riskiest test of America's greatness under pressure. In this gripping insider account, Robert Kurson puts the focus on the three astronauts and their families: the commander, Frank Borman, a conflicted man on his final mission; idealistic Jim Lovell, who'd dreamed since boyhood of riding a rocket to the Moon; and Bill Anders, a young nuclear engineer and hotshot fighter pilot making his first space flight. Drawn from hundreds of hours of one-on-one interviews with the astronauts, their loved ones, NASA personnel, and myriad experts, and filled with vivid and unforgettable detail, Rocket Men is the definitive account of one of America's finest hours. In this real-life thriller, Kurson reveals the epic dangers involved, and the singular bravery it took, for mankind to leave Earth for the first time—and arrive at a new world. "Rocket Men is a riveting introduction to the [Apollo 8] flight. . . . Kurson details the mission in crisp, suspenseful scenes. . . . [A] gripping book." —The New York Times Book Review

Please note: This is a companion version & not the original book. Sample Book Insights: #1 The stories about the poison pills at NASA were jokes. There were no situations in which you would ever consider making an early exit, and even if there were, you had lots of easier ways to do it than poison pills. #2 The people in Houston felt bad about all this, and came on the line to say so. Apollo 13, we've got lots and lots of people working on this. We'll get you some dope as soon as we have it, and you'll be the first one to know. #3 The atmosphere in the studio was electric from the moment Bergman arrived. He would be getting only a minute

or so of live airtime, but he knew he would have to pack a lot of information into that short sweep of the clock. #4 The astronauts on board the Apollo 13 spacecraft suffered a major electrical failure, leaving them in no immediate danger, but ruling out any chance of a lunar landing. The astronauts would have to abandon ship and make their way into the lunar module.

The Apollo 13 Mission Greenleaf Book Group For middle grade space enthusiasts, the amazing true story of the doomed Apollo 13 moon mission that nearly ended in disaster. April 13, 1970: Two hundred thousand miles from Earth and counting, an explosion rips through Jim Lovell's spacecraft. The crippled ship hurtles toward the moon at three times the speed of sound, losing power and leaking oxygen into space. Lovell and his crew were two days from the dream of a lifetime—walking on the surface of moon. Now, they will count themselves lucky to set foot on Earth again. From “Houston, we've had a problem” to the final tense moments at Mission Control, *Lost in Outer Space* takes readers on the unbelievable journey of Apollo 13 and inside the minds of its famous and heroic astronauts. Complete with photographs of the crew and diagrams of the spacecraft, this is an up-close-and-personal look at one of the most thrilling survival stories of all time.

“Fans of action-packed true survival stories will take to this real-life space episode—an easy pick for upper elementary schoolers.”

Book & CD-ROM. Forewords by Ron Howard (Director of 'Apollo 13') and Clint Howard (who played Sy in the movie). Includes CD-ROM: 4 Hours of tape loops from Apollos 13 and 15. Most of what we learn about NASA's space missions comes from statements carefully planned and massaged by managers and public relations people. With *Apollo EECOM: Journey of a Lifetime* we finally get an insider's view of how the Flight Controllers operated and just what they faced when events were crucial. This book is the life story of Sy Liebergot, former NASA Flight Controller, with emphasis on his years working in Mission Control. Following the disastrous tank explosion during the Apollo 13 mission, it was the Flight Controllers that made possible the safe return of the three endangered astronauts. Aboard Apollo 13, Lovell, Haise and Swigert performed wonders battling for their lives, but without the expertise, quick thinking and technical support of Mission Control, they never could have come home. Sy Liebergot was there and relates the details as they really happened. And Apollo 13 is just one of the many exciting stories he tells us. Truly an

insider's view, this book discusses not just the events, but also the people that decided and enacted those events. These are the details that were never shown on anyone's TV screen; finally we get to learn what type of people the NASA Mission Controllers really were, and how they handled the demanding tasks that were theirs alone.
