## Essential Study Skills for Science Students Holt McDougal

This should be the last course a student takes before high school biology. Typically, we recommend that the student take this course during the same year that he or she is taking prealgebra. Exploring Creation With Physical Science provides a detailed introduction to the physical environment and some of the basic laws that make it work. The fairly broad scope of the book provides the student with a good understanding of the earth's atmosphere, hydrosphere, and lithosphere. It also covers details on weather, motion, Newton's Laws, gravity, the solar system, atomic structure, radiation, nuclear reactions, stars, and galaxies. The second edition of our physical science course has several features that enhance the value of the course: \* There is more color in this edition as compared to the previous edition, and many of the drawings that are in the first edition have been replaced by higher-quality drawings. \* There are more experiments in this edition than there were in the previous one. In addition, some of the experiments that were in the previous edition have been changed to make them even more interesting and easy to perform. \* Advanced students who have the time and the ability for additional learning are directed to online resources that give them access to advanced subject matter. \* To aid the student in reviewing the course as a whole, there is an appendix that contains questions which cover the entire course. The solutions and tests manual has the answers to those questions. Because of the differences between the first and second editions, students in a group setting cannot use both. They must all have the same edition. A further description of the changes made to our second edition courses can be found in the sidebar on page 32.

From the rivers and streams to the mighty ocean, God filled the Earth's waters with animals great and small. Upon His Word, enormous whales sprung into being. At His command, billions of plankton leapt to life. On that day, millions of creatures like the strapping sea turtles, the skulking sharks, the delightful dolphins, and the soaring squid gladly joined their fellow sea animals. How joyously crammed with excitement was the fifth day of earth's existence. Apologia's newest elementary science book will take you and your family on an exploration into the wonders of the swimming creatures made on the fifth day of Creation. You'll begin with a big splash from the whales and dolphins, then spy on seals and meet manatees before swimming with the sea turtles, snakes, and salamanders. You'll even peek in on the primeval plesiosaurus and its pals. Following your frolic with fish and sharks, you'll uncover the world of crabby crustaceans, sea snails, clams, and their soft bodied friends like the octopus, squid, and nautilus. You'll consort with corals, find flowers that devour plankton, see stars and feathers that walk, leap and roll, and discover dollars that disappear in the sand and sponges that clean more than you might think. From the microscopic to massive, no stone is left unturned in your student's passage through the waters of the world. The creatures your student studies will come to life as your student creates replicas of them and adds them to his Ocean box - a miniature hand-crafted aquarium. As always, each lesson ends with an experiment or project reinforcing the scientific method and the concepts studied. Among other experiments and projects, your student will try on blubber, investigate a shark's ability to sense electrical currents, explore how whales can hear sounds that come from far away, and learn through experimentation which creatures make the best fossils. No matter how near or far you live from the ocean, you and your students will wonder at God's design in the amazing aquatic animals He formed and fashioned on the fifth day. Slip on your scuba gear, and come explore with us!

*The Human Body Book* Apologia Educational Ministries

For all the discussion in the media about creationism and 'Intelligent Design', virtually nothing has been said about the evidence in question - the evidence for evolution by natural selection. Yet, as this succinct and important book shows, that evidence is vast, varied, and magnificent, and drawn from many disparate fields of science. The very latest research is uncovering a stream of evidence revealing evolution in action - from the actual observation of a species splitting into two, to new fossil discoveries, to the deciphering of the evidence stored in our genome. *Why Evolution is True* weaves together the many threads of modern work in genetics, palaeontology, geology, molecular biology, anatomy, and development to demonstrate the 'indelible stamp' of the processes first proposed by Darwin. It is a crisp, lucid, and accessible statement that will leave no one with an open mind in any doubt about the truth of evolution.

This book begins with a lesson on the nature of botany and the process of classifying plants. It then discusses the development of plants from seeds, the reproduction processes in plants, the way plants make their food, and how plants get their water and nutrients and distribute them throughout the body of the plant. As students study these topics, they also learn about many different kinds of plants in creation and where they belong in the plant classification system. The activities and projects use easy-to-find household items and truly make the lessons come alive! They include making a "light hut" in which to grow plants, dissection of a bean seed, growing seeds in plastic bags to watch the germination process, making a leaf skeleton, observing how plants grow towards light, measuring transpiration, forcing bulbs to grow out of season, and forcing pine cones to open and close. We recommend that you spend the entire school year covering this book.
