From the rivers and streams to the mighty ocean, God filled the Earth's waters with animals great and small. Upon His Word, enormous whales sprung into being. At His command, billions of plankton leapt to life. On that day, millions of creatures like the strapping sea turtles, the skulking sharks, the delightful dolphins, and the soaring squid gladly joined their fellow sea animals. How joyously crammed with excitement was the fifth day of earth's existence. Apologia's newest elementary science book will take you and your family on an exploration into the wonders of the swimming creatures made on the fifth day of Creation. You'll begin with a big splash from the whales and dolphins, then spy on seals and meet manatees before swimming with the sea turtles, snakes, and salamanders. You'll even peek in on the primeval plesiosaurus and its pals. Following your frolic with fish and sharks, you'll uncover the world of crabby crustaceans, sea snails, clams, and their soft bodied friends like the octopus, squid, and nautilus. You'll consort with corals, find flowers that devour plankton, see stars and feathers that walk, leap and roll, and discover dollars that disappear in the sand and sponges that clean more than you might think. From the microscopic to massive, no stone is left unturned in your student's passage through the waters of the world. The creatures your student studies will come to life as your student creates replicas of them and adds them to his Ocean box - a miniature hand-crafted aquarium.

As always, each lesson ends with an experiment or project reinforcing the scientific method and the concepts studied. Among other experiments and projects, your student will try on blubber, investigate a shark's ability to sense electrical currents, explore how whales can hear sounds that come from far away, and learn through experimentation which creatures make the best fossils. No matter how near or far you live from the ocean, you and your students will wonder at God's design in the amazing aquatic animals He formed and fashioned on the fifth day. Slip on your scuba gear, and come explore with us!

This should be the last course a student takes before high school biology. Typically, we recommend that the student take this course during the same year that he or she is taking prealgebra. Exploring Creation With Physical Science provides a detailed introduction to the physical environment and some of the basic laws that make it work. The fairly broad scope of the book provides the student with a good understanding of the earth's atmosphere, hydrosphere, and lithosphere. It also covers details on weather, motion, Newton's Laws, gravity, the solar system, atomic structure, radiation, nuclear reactions, stars, and galaxies. The second edition of our physical science course has several features that enhance the value of the course: \* There is more color in this edition as compared to the previous edition, and many of the drawings that are in the first edition have been replaced by higher-quality drawings. \* There are more experiments in this edition than there were in the previous one. In addition, some of the experiments that were in the previous edition have been changed to make them even more interesting and easy to perform. \* Advanced students who have the time and the ability for additional learning are directed to online resources that give them access to advanced subject matter. \* To aid the student in reviewing the course as a whole, there is an appendix that contains questions which cover the entire course. The solutions and tests manual has the answers to those questions. Because of the differences between the first and second editions, students in a group setting cannot use both. They must all have the same edition. A further description of the changes made to our second edition courses can be found in the sidebar on page 32.

What separates people from apes? How can a Great Dane be related to a Chihuahua? Is there evidence that people and dinosaurs lived at the same time? What should you do if you encounter a bear? How can you tell if a snake is poisonous? Come find out answers to these questions and many, many more with Apologia's Exploring Creation with Zoology 3! This third book in the zoology series takes students on a safari through jungles, deserts, forests, farms, and even their own backyard to explore, examine and enjoy the enchanting creatures God designed to inhabit the terrain.

Families will snuggle together and discover the amazing animals from primates to parasites, kangaroos to caimans, and turtles to terrifying T-Rexs this safari doesn't end there! Students will also keep a record of where each animal is found on a map and learn to identify animal tracks. As with all the Apologia elementary books, students will continue the practice of narration, keeping a notebook of what they have learned.

This is a companion CD. It is not a full course. It is designed to be used with the textbook Exploring Creation With Biology: Second Edition. It contains pronunciations for the technical words in the course, animations used to explain some of the more difficult concepts in the course, and videos of experiments that the student would not be able to do on his or her own.

**Essential Study Skills for Science Students** Apologia Educational Ministries

This book begins with a lesson on the nature of botany and the process of classifying plants. It then discusses the development of plants from seeds, the reproduction processes in plants, the way plants make their food, and how plants get their water and nutrients and distribute them throughout the body of the plant. As students study these topics, they also learn about many different kinds of plants in creation and where they belong in the plant classification system. The activities and projects use easy-to-find household items and truly make the lessons come alive! They include making a "light hut" in which to grow plants, dissection of a bean seed, growing seeds in plastic bags to watch the germination process, making a leaf skeleton, observing how plants grow towards light, measuring transpiration, forcing bulbs to grow out of season, and forcing pine cones to open and close. We recommend that you spend the entire school year covering this book.

From the groundbreaking partnership of W. H. Freeman and Scientific American comes this one-of-a-kind introduction to the science of biology and its impact on the way we live. In Biology for a Changing World, two experienced educators and a science journalist explore the core ideas of biology through a series of chapters written and illustrated in the style of a Scientific American article. Chapters don't just feature compelling stories of real people—each chapter is a newsworthy story that serves as a context for covering the standard curriculum for the non-majors biology course. Updated throughout, the new edition offers new stories, additional physiology chapters, a new electronic Instructor's Guide, and new pedagogy.

Discover how the nervous system works, the intricate construction of skeleton and muscles, and how your body protects itself when you are under threat. Put yourself under the microscope using the interactive DVD-Rom. Zoom in on a body part and see the bodies processes in action from a nerve impulse to blood surging through an artery. Journey inside and examine what can go wrong with the human machine: explore the causes and symptoms for diseases and ailments.

The perpetuation of life

In this book, your children will begin exploring the dynamics of flight and animal classification, understanding why the design we see in these incredible creatures points us to our Creator God. Then, get ready for the exciting adventure of learning about birds. Your children will learn how to attract various bird species to your yard and identify them by looking at their special physical characteristics, diverse nests, and interesting domestic practices. They will also learn the anatomy and the glorious design that enables birds to do remarkable things. The text contains actual experiments on the preferences and habits of the birds your children see. These experiments further enrich the learning experience. After becoming amateur ornithologists, your children will explore the world of chiropterology, which is the study of bats. They will be able to intelligently share with others the value of bats in our world while exposing the misconceptions that most people have regarding these docile creatures of the night. Your children will then investigate entomology, the study of insects. They will learn to scientifically classify insects they find in their yard by a simple glance at their wings and other important characteristics. In addition to designing experiments with flies, crickets, darkling moths, and caterpillars, they will also learn how to attract and catch insects for scientific study. When your children complete this study of zoology, they will never view nature in the same way again. Their eyes will be open to the different species that live in their midst, enjoying and understanding nature to the fullest. Vacations will become educational experiences as they notice birds and insects inhabiting the areas they visit. By learning to keep a field journal, they will be able to notice unusual circumstances or sudden increases in bird or insect populations. They will become true scientists as they come to know nature and the fascinating world that God created. Grades K-6.

#### Exploring Creation with Botany

The vital resource for grading all assignments from the Master's Class Biology course, which includes: Instruction in biology with labs that provide comprehensive lists for required materials, detailed procedures, and lab journaling pages. A strong Christian worldview that clearly reveals God's wondrous creation of life and His sustaining power. This is an introductory high school level course covering the basic concepts and applications of biology.

This 36-week study of biology begins with an overview of chemistry while opening a deeper understanding of living things that God created. The course moves through the nature of cells, ecosystems, biomes, the genetic code, plant and animal taxonomies, and more. Designed by a university science professor, this course provides the solid foundation students will need if taking biology in college. **FEATURES:** The calendar provides daily lessons with clear objectives, and the worksheets, quizzes, and tests are all based on the readings. Labs are included as an integral part of the course.

#### Science in the Beginning

Including numerous views, cross-sections, and other diagrams, this entertaining instruction guide includes careful, scientifically accurate line renderings of the body's organs and major systems: skeletal, muscular, nervous, reproductive, and more. Each remarkably clear and detailed illustration is accompanied by concise, informative text and suggestions for coloring. 43 plates.

More people get into medical school with a Kaplan MCAT course than all major courses combined. Now the same results are available with Kaplan's MCAT Biology Review. This book features thorough subject review, more questions than any competitor, and the highest-yield questions available. The commentary and instruction come directly from Kaplan MCAT experts and include targeted focus on the most-tested concepts plus more questions than any other guide. Kaplan's MCAT Biology Review offers: **UNPARALLELED MCAT**

**KNOWLEDGE:** The Kaplan MCAT team has spent years studying every document related to the MCAT available. In conjunction with our expert psychometricians, the Kaplan team is able to ensure the accuracy and realism of our practice materials. **THOROUGH SUBJECT REVIEW:** Written by top-rated, award-winning Kaplan instructors. All material has been vetted by editors with advanced science degrees and by a medical doctor. **EXPANDED**

**CONTENT THROUGHOUT:** While the MCAT has continued to develop, this book has been updated continuously to match the AAMC's guidelines precisely—no more worrying if your prep is comprehensive! **MORE PRACTICE THAN THE COMPETITION:** With questions throughout the book and access to one practice test, Kaplan's MCAT Biology Review has more practice than any other MCAT Biology book on the market. **ONLINE COMPANION:**

Access to online resources to augment content studying, including one practice test. The MCAT is a computer-based test, so practicing in the same format as Test Day is key. **TOP-QUALITY IMAGES:** With full-color, 3-D illustrations, charts, graphs and diagrams from the pages of Scientific American, Kaplan's MCAT Biology Review turns even the most intangible, complex science into easy-to-visualize concepts. **KAPLAN'S MCAT REPUTATION:** Kaplan gets more people into medical school than all other courses, combined. **UTILITY:** Can be used alone or with other companion books in Kaplan's MCAT Review series.
