The new iPhone 13 series is an  
improvement over previous  
versions. It uses 3d mapping,  
and other technology to  
create a curved screen which

seems to sit in the palm of the  
hand. This seems to be the  
technology from Apple to  
solve the problem of not being  
able to fit the entire screen in  
the bezel. However, due to the  
new design they have changed  
the volume rocker and the  
headphone jack. However, it's  
still a great phone and still  
beats every other phone on the  
market. One of the cool things  
they have is the ability to put  
your phone into a reverse  
video so you can see the  
camera lens when taking  
photos. This will be good for
