On a college or university campus, the library is a destination for its users. Students, faculty and staff go to the library for various reasons. Their usage makes the academic library a valuable learning space on campus. However, not much is known about how the library space contributes to user learning. In *Assessing Library Space for*

academic institutions and how that usage is an integral part of the student learning experience. Included are the perspectives of an architect who is tasked with designing library spaces with learning in mind, a psychologist whose professional research focuses on the concept of place, and a dynamic group of academic librarians who are dedicated to making the library conducive to the needs of their learners. This book is a combination of theory, practical and research based chapters with an overall focus on the intersection of library space and learning. The authors demonstrate the importance of the library space in our users' lives. In addition, the authors discuss the importance of determining ways to learn how library space contributes to user learning. Readers will gain an understanding of the library space as a valuable learning space and the steps librarians need to take to assess learning in the academic library. \*First Place Winner of the Society of Environmental Journalists' Rachel Carson Environment Book Award\* "If you're looking for something to cling to in what often feels like a hopeless conversation, Schlossberg's darkly humorous, knowledge-is-power, eyes-wide-open approach may be just the thing."--Vogue From a former New York Times science writer, this urgent call to action will empower you to stand up to climate change and environmental pollution by making simple but impactful everyday choices. With urgency and wit, Tatiana Schlossberg explains that far from being only a distant problem of the natural world created by the fossil fuel industry, climate change is all around us, all the time, lurking everywhere in our convenience-driven society, all without our realizing it. By examining the unseen and unconscious environmental impacts in four areas-the Internet and technology, food, fashion, and fuel - Schlossberg helps readers better understand why climate change is such a complicated issue, and how it connects all of us: How streaming a movie on Netflix in New York burns coal in Virginia; how eating a hamburger in California might contribute to pollution in the Gulf of Mexico; how buying an inexpensive cashmere sweater in Chicago expands the Mongolian desert; how destroying forests from North Carolina is necessary to generate electricity in England. Cataloging the complexities and frustrations of our carbon-intensive society with a dry sense of humor, Schlossberg makes the climate crisis and its solutions interesting and relevant to everyone who cares, even a little, about the planet. She empowers readers to think about their stuff and the environment in a new way, helping them make more informed choices when it comes to the future of our world. Most importantly, this is a book about the power we have as voters and consumers to make sure that the fight against climate change includes all of us and all of our stuff, not just industry groups and politicians. If we have any hope of solving the problem, we all have to do it together. "A compelling-and illuminating-look at how our daily habits impact the environment."--Vanity Fair "Shows how even the smallest

decisions can have profound environmental consequences."--The New York Times

The Apple TV 4K is known as the fifth generation Apple TV that was released to the public in September 2017. The TV has support for HDR10, Dolby Vision and 2160p output. It also has a faster processor known as the Apple A10X Fusion. From the outside, it seems quite like the fourth-generation model and the differences are quite small. These are the fifth generation has vents on the base and there is no USB-C port. There is also a white outline around the menu button that is on the Siri remote that comes with the TV. It should be noted that once the new models were released, the 64GB version of the fourth generation of the TV was discontinued. This book will look at the features of the Apple TV 4K so the reader can be updated on what features the TV will come with.

Remote Control John Wiley & Sons

As a youngster, the romance of hacking took hold of my imagination. Computers were always my passion, and the myth (legend?) of kids who moved a satellite by messing around were well known and the subject of daydreaming. But where to begin? While still working a student job, I got my hands on the "Hackers Handbook". To put things in perspective, the internet was young, Microsoft did not believe in CD-ROMs and "Do you

Netscape" was the web browsing term. Modems were the way you connected. I printed the entire "Handbook" on a dot matrix printer, ready to enrich myself with the knowledge of hackers. The text was about BAUD, modems and the protocols used by BBSs. I found the reading as exiting as a student who got his hands on a banned copy of The Little Red Book. But the content proved rather less than insightful. Yes, hacking was different when the words were uttered "the beauty of the baud" (from the original Hackers Manifesto), but times have changed and changed again in a very short period of time.

Object Lessons is a series of short, beautifully designed books about the hidden lives of ordinary things. While we all use remote controls, we understand little about their history or their impact on our daily lives. Caetlin Benson-Allot looks back on the remote control's material and cultural history to explain how such an innocuous media accessory has changed the way we occupy our houses, interact with our families, and experience the world. From the first wired radio remotes of the 1920s to infrared universal remotes, from the homemade TV controllers to the Apple Remote, remote controls shape our media devices and how we live with them. Object Lessons is published in partnership with an essay series in The Atlantic.

**Apple Tv 4k: Learning the Essentials** Rowman & Littlefield

When you hear Apple TV you immediately think it is an actual TV that you are purchasing. But this is not the case. The Apple TV is actually a device that you will use to stream something a little similar to Amazon's Fire or Roku. It is a little black box that is about an inch and a half tall, just a little bit less than four inches, and it runs on a very similar platform to the iPad and the popular iPhones. You can download a list of apps and also games beyond the standard streaming video that you could get from Hulu, Netflix, Amazon, just to name a few. The Apple TV has been centered on various apps, and it is

still able to stream multiple TV shows, movies straight to your HDTV, but this is just the tip of the iceberg on the features this box has been packed with. The box allows you to watch and stream podcasts, play your favorite game, stream your workout playlist, and much more. But what is important to note, to enjoy all these benefits this box is ready to provide it will all depend on the apps that you have installed. Some of the apps you will use are free, and some will cost. Think of it this way; the Apple TV is able to turn your TV into a Smart TV. You can either rent your favorite movies or merely stream your collection from your iTunes account. You could also stream movie shows from apps like Hulu Plus or Netflix; stream your music from the Pandora or Apple Music apps. I mean the list is endless on what the Apple TV can actually do for you. The Apple TV 4K has been designed with some of the fastest processors you could find, the same that powers the iPad Pro. The Apple TV box has been made to be as powerful as most laptops we use. It also has a fast graphics processor that has been designed with enough power that could turn the black box into a game console. Nothing sounds better than this. Apple has genuinely revamped the new generation, but this does not mean you have to throw away your older model, just the same thing they have been doing with iPhone. The third generation is still available in the market for you to purchase.
