This volume explores the challenge of engaging knowledge management in a sharing economy. In a hyper-competitive business environment, everything tends to be digital, virtual and highly networked, which raises the issue of how knowledge management can support the decision whether or not to share strategic resources or capabilities. The book answers

questions such as: to what extent does the sharing economy preserve or compromise the competitive advantage of organizations? And what are the knowledge-management strategies for competitive, yet cautious sharing dynamics?

Software Quality. Model-Based Approaches for Advanced Software and Systems Engineering CRC Press

'The topic is important and neglected and has major implications for the types of industrial policy that make any sense in transition countries. The clear message of this book is that protective science and technology policies would, for the most part, be a total waste of money. What is needed now is internationalization and a demand-driven approach,

exactly the opposite of the former nationally based and supply-led systems existing under socialism.' - Paul Hare, Heriot-Watt University Edinburgh, UK 'Here is a book that goes beyond the abstractions and platitudes of conventional "transition economics" to look at what is really happening on the ground in the post-socialist countries of Eastern Europe . . . The Globalization of Industry and Innovation in Eastern Europe presents a provocative but richly documented assessment of the central dynamic issues facing the East European economies today.' - David Dyker, SPRU - Science and Technology Policy Research, University of Sussex, UK In this important book, industrial and enterprise reform over the last decade in Eastern Europe is critically reviewed in light of increasing Eastern integration

---

into the global economy. The authors argue for the further globalization of Eastern European enterprise networks as a condition for recovery and growth in the region.

Empirical evidence is provided from five industrial sectors (car industry, telecommunication, shipbuilding, computers, software), including case studies and international comparisons.

This compact and concise study provides a clear insight into the concepts of Core Banking Solution (CBS)—a set of software components that offer today's banking market a robust operational customer database and customer administration. It attempts to make core banking solution familiar to the professionals and regulatory authorities, who are responsible for the control and security of

banks, and shows that by using CBS, banking services can be made more customer friendly. This well-organized text, divided into two parts and five sections, begins (Part I) with the need for core banking solution technology in banking system, its implementation and practice.

It then goes on to a detailed discussion on various technology implications of ATM, Internet banking, cash management system and so on. Part I concludes with Business Continuity Planning (BCP) and Disaster Recovery Planning (DCP). Part II focuses on components of audit approach of a bank where the core banking solution has been in operation. Besides, usage of audit tools and study of audit logs have been discussed.

The Second Edition includes new sections on outsourcing of ATM operations, printing of ATM card, printing of Pin Mailers, mobile banking, Point of Sale (POS), financial inclusion, vulnerability assessment, penetration testing and so on. Besides, many topics have been discussed extensively and updated to make the book more comprehensive and complete. Key Features • Suggested checklists for performing audits are

included. • An exclusive chapter is devoted to Case Studies based on fraudulent activities in banks due to lack of security and controls. • Useful Web references have been provided. • Contains relevant standards of international body ISACA, USA. This book would be useful for Chartered Accountants who are Auditors of various banks. It would help the External System Auditors and the Auditors who perform concurrent system audit of banks and also the Officers of the Department of Banking Supervision of the Reserve Bank of India and others who have the responsibilities of regulating the security and controls in the banks. In addition, it would be extremely useful to the bankers who have Information Technology as one of the subjects for the CAIIB examination.

This book contains revised selected papers presented at the IFIP WG 9.7 International Conference on the History of Computing, HC 2016, held in Brooklyn, NY,

---

USA, in May 2016. The 13 full papers included in this volume were carefully reviewed and selected from numerous submissions. The papers cover a wide range of topics related to the history of computing and focus on the history of pre-existing relationships and communities that led to triumphs (and dead-ends) in the history of computing. This broad perspective helps to tell a more accurate story of important developments like the Internet and provide a better understanding of how to sponsor future invention and innovation. They reflect on histories that foreground the international community along four broad themes: invention, policy, infrastructure, and social history.

International Industrial Networks and Industrial Restructuring in Central and Eastern Europe analyses the role of international industrial networks in industrial restructuring and corporate growth in central Europe, Russia and Ukraine. It shows that two distinct patterns of international industrial integration - domestic vs. foreign led modernisations - have developed in these two regions which have significant effects on patterns of growth and integration of these economies. International Industrial Networks and Industrial Restructuring in Central and Eastern Europe is based on a number of industry and firm case studies which are analysed and interpreted within the current international business and political economy literature. The publication provides

valuable insights to managers and policy-makers who are interested in understanding different strategic options for business activity in Central and East European countries. For the academic reader, it offers a new perspective on international, industrial networks in which theories on strategic management and on industry restructuring and corporate growth are merged into a new view of growth and transformation process.

Software architectures have gained wide popularity in the last decade. They generally play a fundamental role in coping with the inherent difficulties of the development of large-scale and complex software systems. Component-oriented and aspect-oriented programming enables software engineers to implement complex applications from a set of pre-defined components. *Software Architectures and Component Technology* collects excellent chapters on software architectures and component technologies from well-known authors, who not only explain the advantages, but also present the shortcomings of the current approaches while introducing novel solutions to overcome the shortcomings. The unique features of this book are: evaluates the current architecture design methods and component composition techniques and explains their shortcomings; presents three practical architecture

design methods in detail; gives four industrial architecture design examples; presents conceptual models for distributed message-based architectures; explains techniques for refining architectures into components; presents the recent developments in component and aspect-oriented techniques; explains the status of research on Piccola, Hyper/J®, Pluggable Composite Adapters and Composition Filters. *Software Architectures and Component Technology* is a suitable text for graduate level students in computer science and engineering, and as a reference for researchers and practitioners in industry. This book was first published in 2004. National economic growth is fueled by the development of high technology clusters such as Silicon Valley. The contributors examine the founding of ten clusters that have been successful at an early stage of growth in information technology. Their key finding is that the economics of starting a cluster is very different from the positive feedback loop that sustains an established cluster. While 'nothing succeeds like success' in an established cluster, far more difficult, risky and unlikely are the initial conditions that give

rise to successful clusters. The contributors find regularities in the start of the successful clusters studied, including Silicon Valley around 1964. These cases contain 'old economy' factors such as competencies, firm building capabilities, managerial skills, and connection to markets, more than the flamboyant 'new economy' factors that have been highlighted in prevailing years.
