Population Crisis Cambridge University Press
Identifying thousands of historical fiction novels, biographies, history trade books, CD-ROMs, and videotapes, these books help you locate resources on world history for students. Each is divided into two sections. In the first part, titles are listed according to grade levels within specific geographic areas and time periods. They are further organized by product type. Both books cover world history from Prehistory and the Ancient World to 54 B.C. to the modern era. Other chapters include Roman Empire to A.D. 476; Europe and the British Isles; Africa and South Africa; Australia, New Zealand, Pacific Islands, and Antarctica; Canada; China; India, Tibet, and Burma; Israel and Arab Countries; Japan; Vietnam, Korea, Cambodia, and Thailand; and South and Central America and the Caribbean. The second section has an annotated

bibliography that describes each title and includes publication information and awards. The focus is on books published since 1990, and all have received at least one award from Population Crisis Knopf Books for Young Readers. A reference guide to many records including those in the realm of politics, sports, the environment, space and popular culture, includes a section of United States records. The Writer Libraries Unlimited This SpringerBrief focuses on Acid Mine Drainage (AMD) in the three basins in the Witwatersrand, South Africa. It provides a background to AMD and its impacts from a social science perspective. The South African government and non-governmental

organizations' response to AMD is assessed, as well the socio-economic and developmental effects of AMD. This volume, which is based on the author's Master's dissertation at UNISA, involves interviews with a range of experts in the field from government departments, environmental organisations (activists), the private sector (mining), tourism sector and the agricultural sector. The book discusses existing policy documents on AMD and provides recommendations in response to the many socio-economic impacts which have not been fully addressed. A literature review on the global context of AMD is provided. South Africa's water systems are already severely harmed by climate change, different forms of pollution, and poorly managed sanitation systems. For these reasons, the country is becoming increasingly water-stressed and therefore, water will

continue to become much scarcer in the future. As a result of AMD's continued impact on South Africa's water systems, as a technical or scientific matter as well as the policy implications for the mining sector, water security and socio-economic sustainability has become a highly contested issue.

Did It Take Creativity to Find Relativity, Albert Einstein? Springer Making Connections

teaches an extensive range of reading skills and strategies in order to prepare students for college reading. The current series takes students from a low-intermediate to a low-advanced level of academic reading skill proficiency. In December 2015 two new levels - high beginning and

advanced - will be added to the series. The series contains a strong focus on vocabulary-building, including teaching words from the Academic Word List. It emphasizes critical thinking and increased reading speed. The series has a unique unit structure. At the outset of each unit, students are presented with and practice key reading and vocabulary-building skills. As students read the texts following these sections, they apply these skills by completing exercises in boxes in the margins of the readings, so that students literally have to apply the newly-learned skills 'while reading.'

Following the atomic bombings of Hiroshima and Nagasaki, numerous “atomic narratives”—books, newspapers, magazines, textbooks, movies, and television programs—addressed the implications of the bomb. Post–World War II youth encountered atomic narratives in their daily lives at school, at home and in their communities, and were profoundly affected by what they read and saw. This multidisciplinary study examines the exposure of American youth to atomic narratives during the ten years following World War II. In addition, it examines the broader “social narrative of the atom,” which included educational, social, cultural, and political activities that surrounded and involved American youth. The

activities ranged from school and community programs to movies and television shows to government-sponsored traveling exhibits on atomic energy. The book also presents numerous examples of writings by postwar adolescents, who clearly expressed their conflicted feelings about growing up in such a tumultuous time, and shows how many of the issues commonly associated with the sixties generation, such as peace, fellowship, free expression, and environmental concern, can be traced to this earlier generation.
