Energy and Water Development Appropriations for 2011: Dept. of Energy: Nuclear energy; Secretary of Energy Frontiers E-books

This new Handbook is a comprehensive examination of the rich and complex issues of nuclear proliferation in the early 21st century. The future of the decades-long effort to prevent the further spread of weapons of mass destruction is at a crossroads today. If international nonproliferation efforts are to be successful, an integrated, multi-tiered response will almost certainly be necessary. A serious, thorough, and clear-eyed examination of the range of threats, challenges, and opportunities facing the international community is a necessary first step. This Handbook, which presents the most up-to-date analysis and policy recommendations on these critical issues by recognized, leading scholars in the field, intends to provide such an examination. The volume is divided into three major parts: Part I presents detailed threat assessments of proliferation risks across the globe, including specific regions and countries. Part II explains the various tools developed by the international community to address these proliferation threats. Part III addresses the proliferation risks and political challenges arising from nuclear energy production, including potential proliferation by aspiring states and nonstate groups. This Handbook will be of great interest to students and practitioners of nuclear proliferation, arms control, global governance, diplomacy, and global security and IR general.

Advances in Applied Microbiology BoD – Books on Demand

Neurodevelopmental disorders (NDDs) are severe, heritable conditions characterized by impaired brain development and disability in cognition, social interaction and behavior. Genetic predisposition appears to interact with environmental factors to produce the onset of the disease. In the last decade genomic analysis on NDDs advanced the knowledge of the genetic causes of these disorders: most of the genes identified were not predicted from known biology, and almost all of them engage in neurodevelopmental processes. However, the same studies revealed an unexpected outcome regarding the molecular etiology: many of the same susceptibility genes as well as molecular pathways are emerging across hitherto unrelated disorders- such as autism and schizophrenia- challenging how we conceptualize these conditions. These new discoveries call for the establishment of additional criteria for the classification of the genes and related phenotypes. Beyond the classical distinction according to diagnostic criteria, new parameters should be taken into account: the genetics, the neurobiology of the gene products and the molecular mechanisms that they control. Our broad understanding of NDDs, requires a combination of approaches, including human studies, animal models and theoretical computation. Indeed, progress in technology and the generation of accurate models are advancing the field, and the research is rapidly growing. This Research Topic presents recent advances in neurodevelopmental disorders from genes to systems, in single conditions and across different phenotypes, and report the newest treatments in use. Recognized experts in the field discuss recent findings in molecular studies, in vivo imaging, neuropsychology, neuropharmacology and computational neuroscience. This multidisciplinary approach enriches our understanding of the mechanisms involved in the onset and progression of NDDs with the perspective of revealing the biological signs of the disorders and identifying new therapeutics.

Use this convenient resource to formulate nursing diagnoses and create individualized care plans! Updated with the most recent NANDA-I approved nursing diagnoses, Nursing Diagnosis Handbook: An Evidence-Based Guide to Planning Care, 9th Edition shows you how to build customized care plans using a three-step process: assess, diagnose, and plan care. It includes suggested nursing diagnoses for over 1,300 client symptoms, medical and psychiatric diagnoses, diagnostic procedures, surgical interventions, and clinical states. Authors Elizabeth Ackley and Gail Ladwig use Nursing Outcomes Classification (NOC) and Nursing Interventions Classification (NIC) information to guide you in creating care plans that include desired outcomes, interventions, patient teaching, and evidence-based rationales. Promotes evidence-based interventions and rationales by including recent or classic research that supports the use of each intervention. Unique! Provides care plans for every NANDA-I approved nursing diagnosis. Includes step-by-step instructions on how to use the Guide to Nursing Diagnoses and Guide to Planning Care sections to create a unique, individualized plan of care. Includes pediatric, geriatric, multicultural, and home care interventions as necessary for plans of care. Includes examples of and suggested NIC interventions and NOC outcomes in each care plan. Allows quick access to specific symptoms and nursing diagnoses with alphabetical thumb tabs. Unique! Includes a Care Plan Constructor on the companion Evolve website for hands-on practice in creating customized plans of care. Includes the new 2009-2011 NANDA-I approved nursing diagnoses including 21 new and 8 revised diagnoses. Illustrates the Problem-Etiology-Symptom format with an easy-to-follow, colored-coded box to help you in formulating diagnostic statements. Explains the difference between the three types of nursing diagnoses. Expands information explaining the difference between actual and potential problems in

performing an assessment. Adds detailed information on the multidisciplinary and collaborative aspect of nursing and how it affects care planning. Shows how care planning is used in everyday nursing practice to provide effective nursing care.

This volume presents an in-depth review of experimental and theoretical studies on the newly discovered Fe-based superconductors. Following the Introduction, which places iron-based superconductors in the context of other unconventional superconductors, the book is divided into three sections covering sample growth, experimental characterization, and theoretical understanding. To understand the complex structure-property relationships of these materials, results from a wide range of experimental techniques and theoretical approaches are described that probe the electronic and magnetic properties and offer insight into either itinerant or localized electronic states. The extensive reference lists provide a bridge to further reading. Iron-Based Superconductivity is essential reading for advanced undergraduate and graduate students as well as researchers active in the fields of condensed matter physics and materials science in general, particularly those with an interest in correlated metals, frustrated spin systems, superconductivity, and competing orders.

Cardiac arrhythmias secondary to hereditary genetic disorders are increasingly recognized as a cause for sudden cardiac death in the general population. Mutations in a large number of genes encoding ion channels and proteins involved in cell-cell coupling have been identified in affected patient populations. Furthermore, genetic defects in other proteins directly or indirectly influencing cardiac electrophysiological properties have been shown to be involved. In-depth studies of the mechanisms underlying the observed electrophysiological abnormalities are often limited in patients carrying these mutations. Transgenic mouse models incorporating the genetic defect in question have been successful in studying genotype-phenotype correlations and have provided important insight into the underlying electrophysiological, biophysical, and molecular mechanisms. In this Research Topic Issue, an overview is presented of the knowledge and insight obtained from various transgenic models of cardiac electrophysiology so far, and how further research in this field may be of additional benefit for the future identification, risk-stratification, and treatment of patients with inherited cardiac arrhythmias and sudden death.

The PUILS series delivers up-to-date reviews of progress in Ultrafast Intense Laser Science, a newly emerging interdisciplinary research field spanning atomic and molecular physics, molecular science and optical science which has been stimulated by the recent developments in ultrafast laser technologies. Each volume compiles peer-reviewed articles authored by researchers at the forefront of each their own subfields of UILS. Every chapter opens with an overview of the topics to be discussed, so that researchers unfamiliar to the subfield as well as graduate students can grasp the importance and attractions of the research topic at hand. These are followed by reports of cutting-edge discoveries. This eighth volume covers a broad range of topics from this interdisciplinary research field, focusing on molecules interacting with ultrashort and intense laser fields, advanced technologies for the characterization of ultrashort laser pulses and their applications, laser plasma formation and laser acceleration.

Each generation yielded growths in brightness and time resolution that were unimaginable just a few years earlier. In particular, the progression from the 3rd to 4th generation is a true revolution; the peak brilliance of coherent soft and hard x-rays has increased by 7-10 orders of magnitude, and the image resolution has reached the angstrom (1 [symbol] = 10-10 meters) and femto-second (1 fs = 10-15 second) scales. These impressive capabilities have fostered fundamental scientific advances and led to an explosion of numerous possibilities in many important research areas including material science, chemistry, molecular biology and the life sciences. Even more remarkably, this field of photon source invention and development shows no signs of slowing down. Studies have already been started on the next generation of x-ray sources, which would have a time resolution in the atto-second (1 as = 10-18 second) regime, comparable to the time of electron motion inside atoms.

The book focuses on the integration of intelligent communication systems, control systems, and devices related to all aspects of engineering and sciences. It contains high-quality research papers presented at the 2nd international conference, ICICCD 2017, organized by the Department of Electronics, Instrumentation and Control Engineering of University of Petroleum and Energy Studies, Dehradun on 15 and 16 April, 2017. The volume broadly covers recent advances of intelligent communication, intelligent control and

intelligent devices. The work presented in this book is original research work, findings and practical development experiences of researchers, academicians, scientists and industrial practitioners.

This thesis investigates ultracold molecules as a resource for novel quantum many-body physics, in particular by utilizing their rich internal structure and strong, long-range dipole-dipole interactions. In addition, numerical methods based on matrix product states are analyzed in detail, and general algorithms for investigating the static and dynamic properties of essentially arbitrary one-dimensional quantum many-body systems are put forth. Finally, this thesis covers open-source implementations of matrix product state algorithms, as well as educational material designed to aid in the use of understanding such methods.

The easy-to-use resource for growing healthy, resilient, low-maintenance trees, shrubs, vines, and other fruiting plants from around the world—perfect for farmers, gardeners, and landscapers at every scale. Illustrated with more than 200 color photographs and covering 50 productive edible crops—from Arctic kiwi to jujube, medlar to heartnut—this is the go-to guide for growers interested in creating diversity in their growing spaces. "[Levy and Serrano] go way beyond the standard fare. . . . With their help, you'll be growing persimmons, currants and hazelnuts in no time."—Modern Farmer Cold-Hardy Fruits and Nuts is a one-stop compendium of the most productive, edible fruit-and nut-bearing crops that push the boundaries of what can survive winters in cold-temperate growing regions. While most nurseries and guidebooks feature plants that are riddled with pest problems (such as apples and peaches), veteran growers and founders of the Hortus Arboretum and Botanical Gardens, Allyson Levy and Scott Serrano, focus on both common and unfamiliar fruits that have few, if any, pest or disease problems and an overall higher level of resilience. Inside Cold-Hardy Fruits and Nuts you'll find: Taste profiles for all fifty hardy fruits and nuts, with notes on harvesting and uses Plant descriptions and natural histories Recommended cultivars, both new and classic Propagation methods for increasing plants Nut profiles including almonds, chestnuts, walnuts, and pecans Fertilization needs and soil/site requirements And much more! With beautiful and instructive color photographs throughout, the book is also full of concise, clearly written botanical and cultural information based on the authors' years of growing experience. The fifty fruits and nuts featured provide a nice balance of the familiar and the exotic: from almonds and pecans to more unexpected fruits like maypop and Himalayan chocolate berry. Cold-Hardy Fruits and Nuts gives adventurous gardeners all they need to get growing. Both experienced and novice gardeners who are interested in creating a sustainable landscape with a greater diversity of plant life—while also providing healthy foods—will find this book an invaluable resource.

Nutrient Use Efficiency in Plants: Concepts and Approaches is the ninth volume in the Plant Ecophysiology series. It presents a broad overview of topics related to improvement of nutrient use efficiency of crops. Nutrient use efficiency (NUE) is a measure of how well plants use the available mineral nutrients. It can be defined as yield (biomass) per unit input (fertilizer, nutrient content). NUE is a complex trait: it depends on the ability to take up the nutrients from the soil, but also on transport, storage, mobilization, usage within the plant, and even on the environment. NUE is of particular interest as a major target for crop improvement. Improvement of NUE is an essential pre-requisite for expansion of crop production into marginal lands with low nutrient availability but also a way to reduce use of inorganic fertilizer.

With an easy-to-read approach and unmatched learning resources, Physical Examination & Health Assessment, 7th Edition offers a clear, logical, and holistic approach to physical exams across the lifespan. A total of 1,200 illustrations, checklists of key exam steps, and practical insights ensure that you learn all the physical exam skills you need to know. Written by Carolyn Jarvis, an experienced educator and clinician, this gold standard in physical examination reflects what is going on in nursing today with coverage of emerging trends and the latest on evidence-based practice. It's easy to see why this text is, far and away, #1 in this field! A clear, logical, and streamlined approach simplifies content and helps you learn to perform the complete health assessment: The conversational, easy-to-understand writing style makes learning easier. A two-column format distinguishes normal findings from abnormal findings, and uses step-by-step photos to clarify examination techniques and expected findings. 1,200 full-color illustrations present anatomy and physiology, examination techniques, and abnormal findings. Abnormal findings tables include more than 300 pathophysiology photos to help in recognizing, sorting, and describing abnormalities. Comprehensive coverage reflects the realities of today's nursing practice: NEW content on the Electronic Health Record, charting, and narrative recording provides examples of how to document assessment findings. 150 NEW normal and abnormal examination photos for the nose, mouth, throat, thorax, and pediatric assessment show findings that are unexpected or that require referral for follow-up care, with cultural diversity and developmental variations. UPDATED evidence-based practice content is highlighted and reflects a focus on conducting the most effective, accurate examinations. UPDATED case studies provide opportunities to apply your knowledge and develop your analytical skills. Checklists for use in RN-to-BSN completion programs provide a refresher for seasoned nurses returning to the classroom. A holistic approach to assessment accommodates the diverse types of patients that you will encounter in the real world: Documentation and Critical Thinking sections provide real-world clinical examples of specific patients and how to record assessment findings in the patient's chart, using the SOAP format. Promoting a Healthy Lifestyle boxes enable patient teaching and health promotion while performing the health assessment, and now address the key concept of prevention. Developmental Competence sections provide age-specific assessment techniques for infants, children, adolescents, pregnant women, and older adults. Culture and Genetics sections include biocultural and transcultural information on an increasingly diverse patient population. Spanish-language translations highlight important phrases for improved data gathering and communication during the physical examination with Spanish-speaking patients.

FIB Nanostructures reviews a range of methods, including milling, etching, deposition, and implantation, applied to manipulate structures at the nanoscale. Focused Ion Beam (FIB) is an important tool for manipulating the structure of materials at the nanoscale, and substantially extends the range of possible applications of nanofabrication. FIB techniques are widely used in the semiconductor industry and in materials research for deposition and ablation, including the fabrication of nanostructures such as nanowires, nanotubes, nanoneedles, graphene sheets, quantum dots, etc. The main objective of this book is to create a platform for knowledge sharing and dissemination of the latest advances in novel areas of FIB for nanostructures and related materials and devices, and to provide a comprehensive introduction to the field and directions for further research. Chapters written by leading scientists throughout the world create a fundamental bridge between focused ion beam and nanotechnology that is intended to stimulate readers' interest in developing new types of nanostructures for application to semiconductor technology. These applications are increasingly important for the future development of materials science, energy technology, and electronic devices. The book can be recommended for physics, electrical engineering, and materials science departments as a reference on materials science and device design.
