The Guide to Hydrothermal Spa Development Standards is published by the Global Wellness Institute and was created to provide design and building guidelines for hydrothermal areas (also known as "wet areas") in spas and private residences. Hydrothermal bathing (including saunas, hamams, steam rooms, hydrotherapy pools, etc.), with its benefits of cleansing, detoxifying and improving the immune system, dates back thousands of years and is one of the most ancient spa practices. The goal of this guide is to provide readers - whether they be spa owners, consultants, developers, interior designers, architects, builders, professors, students or anyone embarking on the

study or build of a hydrothermal facility - with a consistent and effective means to approach the planning and construction of these unique areas and to avoid common, costly mistakes.

Discover how graph algorithms can help you leverage the relationships within your data to develop more intelligent solutions and enhance your machine learning models. You ' ll learn how graph analytics are uniquely suited to unfold complex structures and reveal difficult-to-find

---

patterns lurking in your data. Whether you are trying to build dynamic network models or forecast real-world behavior, this book illustrates how graph algorithms deliver value—from finding vulnerabilities and bottlenecks to detecting communities and improving machine learning predictions. This practical book walks you through hands-on examples of how to use graph algorithms in Apache Spark and Neo4j—two of the most common choices for graph analytics. Also included: sample code and tips for over 20 practical graph algorithms that cover optimal pathfinding, importance through centrality, and community detection. Learn how graph analytics vary from conventional statistical analysis. Understand how classic graph algorithms work, and how they are applied. Get guidance on which algorithms to use for different types of questions. Explore algorithm examples with working code and sample datasets from Spark and Neo4j. See how connected feature extraction can increase machine learning accuracy and precision. Walk through creating an ML workflow for link prediction combining Neo4j and Spark.

Practical Software Architecture Solutions from the Legendary Robert C. Martin (“Uncle Bob”) By applying universal rules of software architecture, you can dramatically improve developer productivity throughout the life of any software system. Now, building upon the success of his best-selling books *Clean Code* and *The Clean Coder*, legendary software craftsman Robert C. Martin (“Uncle Bob”) reveals those rules and helps you apply them. Martin’s *Clean Architecture* doesn’t merely present

options. Drawing on over a half-century of experience in software environments of every imaginable type, Martin tells you what choices to make and why they are critical to your success. As you’ve come to expect from Uncle Bob, this book is packed with direct, no-nonsense solutions for the real challenges you’ll face—the ones that will make or break your projects. Learn what software architects need to achieve—and core disciplines and practices for achieving it. Master essential software design principles for addressing function, component separation, and data management. See how programming paradigms impose discipline by restricting what developers can do. Understand what’s critically important and what’s merely a “detail.” Implement optimal, high-level structures for web, database, thick-client, console, and embedded applications. Define appropriate boundaries and layers, and organize components and services. See why designs and architectures go wrong, and how to prevent (or fix) these failures. *Clean Architecture* is essential reading for every current or aspiring software architect, systems analyst, system designer, and software manager—and for every programmer who must execute someone else’s designs. Register your product for convenient access to downloads, updates, and/or corrections as they become available.

ACSM’s Health/Fitness Facility Standards and Guidelines, Fourth Edition, presents the current standards and guidelines that help health and fitness establishments provide high-quality service and program offerings in a safe environment. This text is based in large part on both the work that has begun through the

---

NSF international initiative to develop industry standards to serve as the foundation for a voluntary health and fitness facility certification process and the third edition of ACSM's Health/Fitness Facility Standards and Guidelines. The ACSM's team of experts in academic, medical, and health and fitness fields have put together an authoritative guide for facility operators and owners. By detailing these standards and guidelines and providing supplemental materials, ACSM's Health/Fitness Facility Standards and Guidelines provides a blueprint for health and fitness facilities to use in elevating the standard of care they provide their members and users as well as enhance their exercise experience. The fourth edition includes new standards and guidelines for pre-activity screening, orientation, education, and supervision; risk management and emergency procedures; professional staff and independent contractors; facility design and construction; facility equipment; operational practices; and signage. This edition includes these updates:

- Standards and guidelines aligned with the current version of the pending NSF international health and fitness facility standards
- New guidelines addressing individuals with special needs
- New standards and guidelines regarding automated external defibrillators (AEDs) for both staffed and unstaffed facilities
- Revised standards and guidelines to reflect changing directions and business models within the industry, including 24/7 fitness facilities, medically integrated facilities, and demographic-specific facilities
- New standards and guidelines to better equip facilities that are dealing with youth to ensure the proper care of this segment of the clientele

With improved organization, new visual features, and

additional appendixes, the fourth edition offers a comprehensive and easy-to-use reference of health and fitness facility standards and guidelines. Readers can readily apply the information and save time and expense using over 30 templates found within the appendixes, including questionnaires, informed consent forms, and evaluation forms. Appendixes also contain more than 30 supplements, such as sample preventive maintenance schedules, checklists, and court and facility dimensions. Included in appendix A is Blueprint for Excellence, which allows readers to search efficiently for specific information regarding the standards and guidelines within the book. Health and fitness facilities provide opportunities for individuals to become and remain physically active. As the use of exercise for health care prevention and prescription continues to gain momentum, health and fitness facilities and clubs will emerge as an integral part of the health care system. The fourth edition of ACSM's Health/Fitness Facility Standards and Guidelines will assist health and fitness facility managers, owners, and staff in keeping to a standard of operation, client care, and service that will assist members and users in caring for their health through safe and appropriate exercise experiences.

Legionnaires' disease, a pneumonia caused by the Legionella bacterium, is the leading cause of reported waterborne disease outbreaks in the United States. Legionella occur naturally in water from many different environmental sources, but grow rapidly in the warm, stagnant conditions

---

that can be found in engineered water systems such as cooling towers, building plumbing, and hot tubs. Humans are primarily exposed to Legionella through inhalation of contaminated aerosols into the respiratory system. Legionnaires' disease can be fatal, with between 3 and 33 percent of Legionella infections leading to death, and studies show the incidence of Legionnaires' disease in the United States increased five-fold from 2000 to 2017. Management of Legionella in Water Systems reviews the state of science on Legionella contamination of water systems, specifically the ecology and diagnosis. This report explores the process of transmission via water systems, quantification, prevention and control, and policy and training issues that affect the incidence of Legionnaires' disease. It also analyzes existing knowledge gaps and recommends research priorities moving forward.
