Finished just two months before the author's murder on 18 August 1936 by a gang of Franco's supporters, The House of Bernarda Alba is now accepted as Lorca's great masterpiece of love and loathing. Five daughters live together in a single household with a tyrannical mother. When the father of all but the eldest girl dies, a cynical marriage is advanced which will have tragic consequences for the whole family. Lorca's fascinatingly modern play, rendered here in an English version by David Hare, speaks as powerfully as a political metaphor of oppression as it does as domestic drama. The House of Bernarda Alba premiered at the National Theatre, London, in March 2005.

Conventional coronary angiography can lead to infections, injuries to the arteries, and in rare cases, heart attack or death. Using the new, rapidly developing technique of contrast-enhanced angiography (CEA), also known as magnetic resonance angiography (MRA), cardiologists can now quickly and effectively evaluate a broad range of vascular abnormalities, including the kinds of problems often seen with traditional echocardiography. An Atlas of Contrast-Enhanced Angiography uses images taken directly from the magnetic resonance scanner to illustrate the application of CEA to all the common pathologies and anomalies seen in the cardiovascular system. It contains tables, charts, and line diagrams that delineate the angiograms. Authors Mohiaddin and Bunce supply explanatory text supporting and complementing the figures and providing clinical diagnoses and investigations of a multitude of normal and abnormal findings. A clinical aid to diagnosis and a review text containing bibliographic references and index, An Atlas of Contrast-Enhanced Angiography allows you to learn from the current leaders in the field. In addition, it provides you with a visual aide to the diagnosis and management of vascular disease.

For undergraduate level courses in Cognition and Theories of Learning. The psychology of human memory and cognition is fascinating, dealing with questions and ideas that are inherently interesting, such as how we think, reason, remember, and use language. Using a first person narrative, posing direct questions to the reader, and balancing classic research with cutting edge topics, the author draws in the reader and conveys the excitement of the field. Reflecting the increasing use of new technologies to study memory and cognition, Ashcraft and the new co-author, Gabriel Radvansky, continue to integrate sections on neurosciences within individual chapter topics.
