While there have always been norms and

customs around the use of drugs, explicit public policies--regulations, taxes, and prohibitions--designed to control drug abuse are a more recent phenomenon. Those policies sometimes have terrible side-effects: most prominently the development of criminal enterprises dealing in forbidden (or untaxed) drugs and the use of the profits of drug-dealing to finance insurgency and terrorism. Neither a drug-free world nor a world of free drugs seems to be on offer, leaving citizens and officials to face the age-old problem: What are we going to do about drugs? In *Drugs and Drug Policy*, three noted authorities survey the subject with exceptional clarity, in this addition to the acclaimed series, *What Everyone Needs to Know*®. They begin, by defining "drugs," examining how they work in the brain, discussing the nature of addiction, and exploring the damage they do to users. The book moves on to policy, answering questions about legalization, the role of criminal prohibitions, and the relative legal tolerance for alcohol and tobacco. The authors then dissect the illicit trade, from street dealers to the flow of money to the effect of catching kingpins, and show the precise nature of the relationship between drugs and crime. They examine treatment, both its effectiveness and the role of public policy, and discuss the beneficial effects of some abusable substances. Finally they move outward to look at the role of drugs in our foreign policy, their relationship to terrorism, and the ugly politics that surround the issue. Crisp, clear, and comprehensive, this is a handy and up-to-date overview of one of the most pressing topics in today's world. *What Everyone Needs to Know*® is a registered trademark of Oxford University Press.

The groundbreaking theory of how fire and food drove the evolution of modern humans Ever since Darwin and *The Descent of Man*, the evolution and world-wide dispersal of humans has been attributed to our intelligence and adaptability. But in *Catching Fire*, renowned primatologist Richard Wrangham presents a startling alternative: our

evolutionary success is the result of cooking. In a groundbreaking theory of our origins, Wrangham shows that the shift from raw to cooked foods was the key factor in human evolution. Once our hominid ancestors began cooking their food, the human digestive tract shrank and the brain grew. Time once spent chewing tough raw food could be used instead to hunt and to tend camp. Cooking became the basis for pair bonding and marriage, created the household, and even led to a sexual division of labor. In short, once our ancestors adapted to using fire, humanity began. Tracing the contemporary implications of our ancestors' diets, *Catching Fire* sheds new light on how we came to be the social, intelligent, and sexual species we are today. A pathbreaking new theory of human evolution, *Catching Fire* will provoke controversy and fascinate anyone interested in our ancient origins—or in our modern eating habits.
