This reference work offers a comprehensive overview of the synthesis, properties and biomedical applications of functional biopolymers. Chapters from expert contributors cover topics such as synthetic biopolymers, blood-compatible polymers, ophthalmic polymers and stimuli responsive polymers. An up-to-date review of cell encapsulation strategies and cell surface and tissue engineering is also included in this work, and readers will discover more about hydrogels and polymers from renewable resources. Edited by an international team of experts in the field, this reference work will appeal to researchers, scientists, and practitioners working in this field, or entering this vibrant research area.

This book presents a new way of viewing contaminated soil-as a resource that in many instances can be recovered. The Reuse and Recycling of Contaminated Soils addresses the waste problem associated with contaminated soil and considers alternatives that are environmentally sound, cost-effective, and time efficient. It provides thorough coverage of practical issues associated with reuse and recycling.

This book discusses higher education research as a field of study in Asia. It traces the evolution of research in the field of higher education in several Asian countries, and shares ideas about the evolving higher education research communities in Asia. It also identifies common and dissimilar challenges across national communities, providing researchers and policymakers essential new insights into the relevance of a greater regional articulation of national higher education research communities, and their further integration into and contribution to the international higher education research community as a whole.

Based on British and Iranian sources, this book investigates the background and goals of the coup in Iran, examining how British foreign and domestic agents interfered with Iran ’ s internal affairs between the nationalization of Iran ’ s oil in 1951 until its failure in 1953 with the overthrow of Prime Minister Mossadegh. How and why was Iran ’ s democratically elected government ousted in 1953? Most studies refer to a ‘ CIA-led ’ operation. This study analyses how British agents used the Shah, the ancient Persian Durbar, Majlis deputies, Islamic clergy, and Iranian military officers in the overthrow of the first democratically elected Prime Minister, and highlights how Britain used the ‘ Communist menace ’ as a pretext for protecting its oil interests and persuaded the Americans to orchestrate the coup. This close interaction between British colonial interests, American Cold War goals and Iranian politics ultimately defeated the democratic aspirations of Iran ’ s people.

This book explores the major differences between the kinds of risk encountered in different sectors of industry - production (including agriculture) and services - and identifies the main features of accidents within different industries. Because of these differences, unique risk-mitigation measures will need to be implemented in one industry that cannot be implemented in another, leading to large managerial differences between these broad economic sectors. Based on the analysis of more than 500 disasters, accidents and incidents - around 230 cases from the production sector and around 280 cases from the service sector - the authors compare the risk response actions appropriate within different sectors, and establish when and how it is possible to generalize the experience of dealing with risks in any given industry to a wider field of economic activity. This book is mainly intended for executives, strategists, senior risk managers of enterprise-wide organizations and risk management experts engaged in academic or consulting work. By setting out clearly the sector differences in risk management, the authors aim to improve the practice of general risk assessment with regard to identifying and prioritizing risks, and of risk control with regard to planning appropriate mitigation measures.

Archeofuturism, an important work in the tradition of the European New Right, is finally now available in English. Challenging many assumptions held by the Right, this book generated much debate when it was first published in French in 1998. Faye believes that the future of the Right requires a transcendence of the division between those who wish for a restoration of the traditions of the past, and those who are calling for new social and technological forms - creating a synthesis which will amplify the strengths and restrain the excesses of both: Archeofuturism. Faye also provides a critique of the New Right; an analysis of the continuing damage being done by Western liberalism, political inertia, unrestrained immigration and ethnic self-hatred; and the need to abandon past positions and dare to face the realities of the present in order to realise the ideology of the future. He prophesises a series of catastrophes between 2010 and 2020, brought about by the unsustainability of the present world order, which he asserts will offer an opportunity to rebuild the West and put Archeofuturism into practice on a grand scale. This book is a must-read for anyone concerned with the course that the Right must chart in order to deal with the increasing crises and challenges it will face in the coming decades. Guillaume Faye was one of the principal members of the famed French New Right organisation GRECE in the 1970s and '80s. After departing in 1986 due to his disagreement with its strategy, he had a successful career on French television and radio before returning to the stage of political philosophy as a powerful alternative voice with the publication of Archeofuturism. Since then he has continued to challenge the status quo within the Right in his writings, earning him both the admiration and disdain of his colleagues.

This book contains the proceedings of the latest in a series of biennial conferences on the topic of sustainable regional development that began in 2003. Organised by the Wessex Institute of Technology, the conference series provides a common forum for all scientists specialising in the range of subjects included within sustainable development and planning. It has become apparent that planners, environmentalists, architects, engineers, policy makers and economists have to work

together in order to ensure that planning and development can meet our present needs without compromising the ability of future generations. The topics covered by the papers included in the book include City planning; Regional planning; Social and political issues; Sustainability in the built environment; Rural developments; Cultural heritage; Transportation; Ecosystems analysis, protection and remediation; Environmental management; Environmental impact assessment; Indicators of sustainability; Sustainable solutions in developing countries; Sustainable tourism; Waste management; Flood risk management; Resources management; and Industrial developments.

Diane France loves bones. Why? Because they talk to her. Every skeleton she meets whispers secrets about the life-and death-of its owner. Diane France can hear those secrets because she's a forensic anthropologist, a bone detective. She has the science skills and know-how to examine bones for clues to a mystery: Who was this person and how did he or she die? Bones tell Diane about the life and times of famous people in history, from a Russian royal family to American outlaws and war heroes. They speak to her about murders, mass disasters, and fatal accidents. One day she's collecting skeletal evidence at a crime scene. A phone call later she's jetting to the site of a plane crash or other unexpected tragedy to identify victims. Young readers will be captivated by the thrilling real-life story of this small-town girl full of curiosity and mischief who became a world-famous bone detective.

Insights on Global Challenges and Opportunities for the Century Ahead Lindhardt og Ringhof
Forests cover thirty-one percent of the world ’ s land surface, provide habitats for animals, livelihoods for humans, and generate household income in rural areas of developing countries. They also supply other essential amenities, for instance, they filter water, control water runoff, protect soil erosion, regulate climate, store nutrients, and facilitate countless non-timber forest products (NTFPs). The main NTFPs comprise herbs, grasses, climbers, shrubs, and trees used for food, fodder, fuel, beverages, medicine, animals, birds and fish for food, fur, and feathers, as well as their products, like honey, lac, silk, and paper. At present, these products play an important role in the daily life and well-being of millions of people worldwide. Hence the forest and its products are very valuable and often NTFPs are considered as the ‘ potential pillars of sustainable forestry ’ . NTFPs items like food, herbal drugs, forage, fuel-wood, fountain, fibre, bamboo, rattans, leaves, barks, resins, and gums have been continuously used and exploited by humans. Wild edible foods are rich in terms of vitamins, protein, fat, sugars, and minerals. Additionally, some NTFPs are used as important raw materials for pharmaceutical industries. Numerous industry-based NTFPs are now being exported in considerable quantities by developing countries. Accordingly, this sector facilitates employment opportunities in remote rural areas. So, these developments also highlight the role of NTFPs in poverty alleviation in different regions of the world. This book provides a wide spectrum of information on NTFPs, including important references. We hope that the compendium of chapters in this book will be very useful as a reference book for graduate and postgraduate students and researchers in various disciplines of forestry, botany, medical botany, economic botany, ecology, agroforestry, and biology. Additionally, this book should be useful for scientists, experts, and consultants associated with the forestry sector.

The demand for secure, affordable and clean energy is a priority call to humanity. Challenges associated with conventional energy resources, such as depletion of fossil fuels, high costs and associated greenhouse gas emissions, have stimulated interests in renewable energy resources. For instance, there have been clear gaps and rushed thoughts about replacing fossil-fuel driven engines with electric vehicles without long-term plans for energy security and recycling approaches. This book aims to provide a clear vision to scientists, industrialists and policy makers on renewable energy resources, predicted challenges and emerging applications. It can be used to help produce new technologies for sustainable, connected and harvested energy. A clear response to economic growth and clean environment demands is also illustrated.

This reference work provides a comprehensive and authoritative overview of functional polymers and polymeric materials, ranging from their synthesis and characterization, to properties, actual applications and an outlook on future perspectives. Including over 30 comprehensive review chapters, all written by leading international experts, this reference is also a sound introduction to this exciting field. The book is carefully edited by an international team of experts in the field, ensuring complete coverage of the relevant topics and concise representation. Functional polymers and smart polymeric materials play a decisive role for new innovations in all areas where new materials are needed. Optoelectronics, catalysis, biomaterials, medicine, building materials, water treatment, coatings, and many more applications rely on functional polymers. This work is a major reference for researchers, scientists, and practitioners working in any of these fields, or entering this vibrant research area. Key topics of this reference work include: Polymerization methods and polymer synthesis Characterization and properties of new functional polymers and smart materials Functional polymer composites and blends Applications of functional polymers and smart materials: for electro-optics and optoelectronics, in biology and in medical research, as coatings and adhesives, for gas sensing, in functional membranes for separation or proton conduction and many more

The final report on the conservation of the wall paintings in the tomb of Nefertari in the Valley of Queens, Egypt. This highly successful collaborative venture launched by the Getty Conservation Institute and the Egyptian Antiquities

Organization brought together scientists and conservators from all over the world to address the problems facing one of the most beautiful monuments of antiquity. The painstaking process that saved this cultural treasure in situ is documented in the text written by those who were most intimately involved in its rescue. Paolo and Laura Mora worked with and trained the team of conservators who carried out the consolidation and cleaning of the paintings. An international group of scientists carried out the analysis that was essential to the conservation process. Others contribute articles on the archaeology of the Valley, the iconography of the tomb, the original techniques and materials used by the artists, photographic documentation of the wall paintings, and literary sources for their study.

This book deals with the present and future situation with Quality and Safety management Systems (QMS and SMS). It presents new ideas, points to the basic misunderstandings in the two management systems, and covers a wide range of industries, as well as providing a practical assessment of scientific theory. It explains the fundamental misunderstanding of what Quality and Safety is from a practical point of view and how to improve them by integrating the two systems from the perspective that Quality-I is Safety-II.
