Outsourcing of all types, offshoring of business processing, offshore contract manufacturing and globalization in general continue to create massive change in the world of business. This revolution creates both opportunities and challenges for organizations, managers and professionals of all types. Plunkett's Outsourcing & Offshoring Industry Almanac 2008 covers these sectors in detail. Our coverage includes a detailed business trends analysis and an industry overview. Next, we profile over 300 leading outsourcing and offshoring companies. Our company profiles include complete business descriptions and up to 27 executives by name and title. The CD-ROM database that accompanies Plunkett's Outsourcing & Offshoring Industry Almanac enables you to search, filter and view selected companies, and then to export selected company contact data, including executive names. You'll find a complete overview, industry analysis and market research report in one superb, value-priced package. Fahrenheit 451 Novelty Publishing LLC  
"This monograph highlights the evolution of Carlson's work from the early Larry's Markets to projects currently in design. For Carlson, each new project is an opportunity to stretch the design envelope and to experiment with materials and shapes that expand the art and craft of the firm's work. From this open-minded, idea-based design approach, the work of Carlson Architects continues to explore, invent, and evolve."--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc. Safe, efficient, code-compliant electrical installations are made simple with the latest publication of this widely popular resource. Like its highly successful previous editions, the National Electrical Code 2011 spiral bound version combines solid, thorough, research-based content with the tools you need to build an in-depth understanding of the most important topics. New to the 2011 edition are articles including first-time Article 399 on Outdoor, Overhead Conductors with over 600 volts, first-time Article 694 on Small Wind Electric Systems, first-time Article 840 on Premises Powered Broadband Communications Systems, and more. This spiralbound version allows users to open the code to a certain page and easily keep the book open while referencing that page. The National Electrical Code is adopted in all 50 states, and is an essential reference for those in or entering careers in electrical design, installation, inspection, and safety.

Authors of the book Arc Marine discuss results of a successful effort to create and define a data model for academic, government, military, and private oceanographers, resource managers, conservationists, geographers, nautical archaeologists, and analysts and managers of marine applications. Arc Marine is the perfect starting point for the intermediate marine student as well as a resource for the marine GIS expert. At a time when health of our oceans is seen as crucial to our existence, marine researchers have developed a data model that supports sea floor mapping, fisheries management, marine mammal tracking, monitoring shoreline change, and water temperature analysis. This book enables marine professionals to do better work.

The 2015 "Red Book" is the American Academy of Pediatrics' authoritative guide to manifestations, etiology, epidemiology, diagnosis, and treatment of more than 200 childhood conditions. It provides evidence-based guidance to practicing clinicians on pediatric infections and vaccinations based on the recommendations of the committee as well as the combined expertise of the CDC, the FDA and hundreds of physician contributors. The" Red Book" is an essential reference for pediatric infectious diseases specialists and general pediatricians, and is useful for family medicine and emergency medicine physicians as well. Public health and school health providers, medical residents and students also will find it a high-yield source of pediatric infectious disease and vaccine information. The book is divided into sections that cover Active and passive immunization Disease summaries Antimicrobial therapy for treatment and prophylaxis Care of children in special situations Updated information and recommendations you cannot afford to be without... Standardized approach to disease prevention through immunizations, antimicrobial prophylaxis, and infection control practices New chapter on Hemorrhagic Fevers Caused by Filoviruses has been added New chapter on human parechovirus infections has been added Updated information on hypersensitivity reactions after immunizations The latest on sexually transmitted infections (STIs) in adolescents and children Updated coverage of actinomycosis, amebiasis, arbovirus, bacterial vaginosis, blastocystis, candidiasis, Clostridium difficile, coronaviruses, dengue, enteroviruses, Escherichia coli, Giardia intestinalis, gonococcal infections, Helicobacter pylori infections, lyme disease, meningococcal infections, pediculosis capitis, pertussis, pneumococcal infections, rotavirus, and more Managing Injection Pain has been significantly expanded Updated information on hepatitis C Updated information on group B streptococcal infections Updated section on drugs for parasitic infections Significantly revised chapter on Respiratory Syncytial Virus Recommendations for using MMR or MMRV vaccines have been updated The Antimicrobial Resistance and Antimicrobial Stewardship chapter has been significantly broaded and updated Updated information on HIV And much more!

"The capacitated transshipment problem was originally developed as an extension of the transportation or distribution problem. The transpor-tation problem is a flow network model in which every node is either an origin or a destination. Typically, the origins are production plants and the destinations are consumer markets for some commodity, and a cost is associated with shipping one unit from a given plant to a given market. If some intermediate nodes are introduced, such as warehouses, which are not origins or destinations, the network becomes a transshipment model. Finally, if some or all shipping routes, or arcs in the model, have limits in the amount of flow they may carry, the problem is termed "Capacitated." Any transshipment problem may be solved with a linear programming (LP) model, where each arc is a variable and each node is a constraint. The Simplex Method, commonly used in LP problems, may be specialized to solve these problems very efficiently by exploiting the inherent special network. structure. The key property of networks, essential to the algorithm, is the spanning tree characterization of the basis. The Simplex Method pivots from one basic feasible solution, or spanning tree, to another until optimality is reached. The basis tree provides a unique relationship between the basic variables and the constraints so that the reduced costs may be computed, the pivot procedure completed, and the basis priced out all by simple addition, rather than by matrix operations with the usual tableau. It also provides integer valued basic solutions when supplies, demands and arc bounds are integers"--Document.

Arc-continent collision has been one of the important tectonic processes in the formation of mountain belts throughout geological time, and it continues to be so today along tectonically active plate boundaries such as those in the SW Pacific or the Caribbean. Arc-continent collision is thought to have been one of the most important process involved in the growth of the continental crust over geological time, and may also play an important role in its recycling back into the mantle via subduction. Understanding the geological processes that take place during arc-continent collision is therefore of importance for our understanding of how collisional orogens evolve and how the continental crust grows or is destroyed. Furthermore, zones of arc-continent collision are producers of much of the worlds primary economic wealth in the form of minerals, so understanding the processes that take place during these tectonic events is of importance in modeling how this mineral wealth is formed and preserved. This book brings together seventeen papers that are dedicated to the investigation of the tectonic processes that take place during arc-continent collision. It is divided into four sections that deal firstly with the main players involved in any arc-continent collision; the continental margin, the subduction zone, and finally the volcanic arc and its mineral deposits. The second section presents eight examples of arc-continent collisions that range from being currently active through to Palaeoproterozoic in age. The third section contains two papers, one that deals with the obduction of large-slab ophiolites and a second that presents a wide range of physical models of arc-continent collision. The fourth section brings everything that comes before together into a discussion of the processes of arc-continent collision.

This book constitutes the thoroughly refereed post-conference proceedings of the 12th International Workshop on Graphics Recognition, GREC 2017, held in Kyoto, Japan, in November 2017. The 10 revised full papers presented were carefully reviewed and selected from 14 initial submissions. They contain both classical and emerging topics of graphics rcognition, namely analysis and detection of diagrams, search and classification, optical music recognition, interpretation of engineering drawings and maps.

An electrifying story of the sensational murder trial that divided a city and ignited the civil rights struggle In 1925, Detroit was a smoky swirl of jazz and speakeasies, assembly lines and fistfights. The advent of automobiles had brought workers from around the globe to compete for manufacturing jobs, and tensions often flared with the KKK in ascendance and violence rising. Ossian Sweet, a proud Negro doctor-grandson of a slave-had made the long climb from the ghetto to a home of his own in a previously all-white neighborhood. Yet just after his arrival, a mob gathered outside his house; suddenly, shots rang out: Sweet, or one of his defenders, had accidentally killed one of the whites threatening their lives and homes. And so it began-a chain of events that brought America's greatest attorney, Clarence Darrow, into the fray and transformed Sweet into a controversial symbol of equality. Historian Kevin Boyle weaves the police investigation and courtroom drama of Sweet's murder trial into an unforgettable tapestry of narrative history that documents the volatile America of the 1920s and movingly re-creates the Sweet family's journey from slavery through the Great Migration to the middle class. Ossian Sweet's story, so richly and poignantly captured here, is an epic tale of one man trapped by the battles of his era's changing times. Arc of Justice is the winner of the 2004 National Book Award for Nonfiction.

This splendid chapbook of thirteen poems by Ralph Culver continues to add to his reputation as one of New England's most respected and authoritative voices. A true "poet's poet," Culver has collected in So Be It a cycle of poems, divided into three sections, that moves from "Boy at the Plate"--sharply pointed examinations of childhood memories--through compelling and at times disquieting poems on adulthood and family ("Last Call"), and concluding with the title section featuring a quartet of poems with a well-earned, meditative, spiritually generous worldview. As always, Culver's language is sensuous, evocative, almost cinematic in its descriptive prowess, encompassing a remarkable range of poetic styles from free to formal. From the cover: "In the title poem of this striking sheaf, Ralph Culver--one of New England's truly distinguished voices--refers to '...this hunger. How it goes on, and tomorrow, and always, / blazing up in the body, torching the years to ash.' That seems to me an accurate precis of what goes on in So Be It. Though the perspective is generally retrospective (few if any have recalled the wonder and bafflement of childhood better than this poet), the 'blaze' of thought and emotion in his poetry carries vigorously forward into the present." --Sydney Lea

The international refugee regime is fundamentally broken. Designed in the wake of World War II to provide protection and assistance, the system is unable to address the record numbers of persons displaced by conflict and violence today. States have put up fences and adopted policies to deny, deter, and detain asylum seekers. People recognized as refugees are routinely denied rights guaranteed by international law. The results are dismal for the millions of refugees around the world who are left with slender prospects to rebuild their lives or contribute to host communities. T. Alexander Aleinikoff and

---

Leah Zamore lay bare the underlying global crisis of responsibility. The Arc of Protection adopts a revisionist and critical perspective that examines the original premises of the international refugee regime. Aleinikoff and Zamore identify compromises at the founding of the system that attempted to balance humanitarian ideals and sovereign control of their borders by states. This book offers a way out of the current international morass through refocusing on responsibility-sharing, seeing the humanitarian-development divide in a new light, and putting refugee rights front and center.

When you think of a construction site, you might picture bulldozers, workers in hard hats, and huge iron beams being shifted into place. You might not imagine robots, drones, and 3D printers, but they are becoming essential equipment on modern building sites. The field of construction is changing quickly as project managers rely more on interactive apps than blueprints, and on images from autonomous drones rather than hand drawn schematics. Your readers will explore how construction is merging with technology today, and what it means for a career tomorrow.

This book provides one of the first systematic in-depth studies on regional catastrophe risk pools. It explores the various goals of these new financial instruments, illustrating how they function on a conceptual, technical and practical level, and reconstructs their political genesis. With climate-related disasters increasing in frequency and severity, Insuring Against Climate Change explores how affected countries, especially those in the Global South, have increasingly turned to innovative index insurance instruments, as demonstrated by the creation of the Caribbean Catastrophic Risk Insurance Facility (CCRIF), the African Risk Capacity (ARC) and the Pacific Catastrophe Risk Assessment and Financing Initiative Facility (PCRAFI Facility). Scherer scrutinizes the formation of this trend, exploring comparatively the goals, characteristics and histories of these tools, and argues that their attractiveness rests more on political than economic benefits and is, in fact, more supply than demand-driven. Making a significant contribution to current debates on the opportunities and limitations of what are sometimes described as indirect ‘climate risk insurance’, this book will be of great interest to political scientists with an interest in insurance instruments and climate-related disaster management politics as well as to practitioners working in the insurance, finance and the development sectors.

**So Be It** Simon and Schuster

Bestselling author Michael Shermer's exploration of science and morality that demonstrates how the scientific way of thinking has made people, and society as a whole, more moral From Galileo and Newton to Thomas Hobbes and Martin Luther King, Jr., thinkers throughout history have consciously employed scientific techniques to better understand the non-physical world. The Age of Reason and the Enlightenment led theorists to apply scientific reasoning to the non-scientific disciplines of politics, economics, and moral philosophy. Instead of relying on the woodcuts of dissected bodies in old medical texts, physicians opened bodies themselves to see what was there; instead of divining truth through the authority of an ancient holy book or philosophical treatise, people began to explore the book of nature for themselves through travel and exploration; instead of the supernatural belief in the divine right of kings, people employed a natural belief in the right of democracy. In The Moral Arc, Shermer will explain how abstract reasoning, rationality, empiricism, skepticism--scientific ways of thinking--have profoundly changed the way we perceive morality and, indeed, move us ever closer to a more just world.

Through Waste-to-Energy (WtE) technology, plants use waste as a renewable fuel to co-produce electricity, heating, and cooling for urban utilization. This professional book presents the latest developments in WtE technologies and their global applications. The first part of the book covers thermal treatment technologies, including combustion, novel gasification, plasma gasification, and pyrolysis. It then examines 35 real-world WtE case studies from around the world, analyzing technical information behind planning, execution, goals, and national strategies. Results through the years show the benefits of the technology through the life cycle of the products. The book also examines financial and environmental aspects.
