Where does a wannabe miner or established individual operator get the information to create a small yet highly profitable mining company? When author A R C Matuska searched for simple, practical mining books and information about the industry, he found high-powered studies, academic theses and computer modeling. In short, nothing of use to the small, practical mine operator. The best information he found was in booklets aimed at ex-servicemen after World War II, encouraging them to take up mining in the British colonies in Africa. Since then, there has not been much written in such a useful and practical manner. To answer this need, a veritable goldmine of information is included in the book Practical Mining and Gold Processing for the Small Scale Operator. Where does a newcomer to the industry find out how to sample and calculate a potential resource and plan his mining business? Where does he get the information to run a small ball mill or stamp mill? How does he set up and dress a simple amalgam plate, retort some amalgam or make up a retort, and calculate the percentage of gold in bullion? Where does a small operator find out how to set up a low-cost cyanide plant and its running procedures? And how does he improve mining and blasting efficiencies? This book provides practical applications and solutions to get you started in one of the most diverse, profitable and interesting industries. It is indexed in detail so information can be easily found without sifting through realms of data. A R C Matuska is a career miner. He owns and consults for several mining properties in East and Central Africa. Publisher's website: <http://sbpra.com/ARCMatuska>

Through Waste-to-Energy (WtE) technology, plants use waste as a renewable fuel to co-produce electricity, heating, and cooling for urban utilization. This professional book presents the latest developments in WtE technologies and their global applications. The first part of the book covers thermal treatment technologies, including combustion, novel gasification, plasma gasification, and pyrolysis. It then examines 35 real-world WtE case studies from around the world, analyzing technical information behind planning, execution, goals, and national strategies. Results through the years show the benefits of the technology through the life cycle of the products. The book also examines financial and environmental aspects.

Annual Report of the Appalachian Regional Commission Rand Corporation

An electrifying story of the sensational murder trial that divided a city and ignited the civil rights struggle In 1925, Detroit was a smoky swirl of jazz and speakeasies, assembly lines and fistfights. The advent of automobiles had brought workers from around the globe to compete for manufacturing jobs, and tensions often flared with the KKK in ascendance and violence rising. Ossian Sweet, a proud Negro doctor-grandson of a slave-had made the long climb from the ghetto to a home of his own in a previously all-white neighborhood. Yet just after his arrival, a mob gathered outside his house; suddenly, shots rang out: Sweet, or one of his defenders, had accidentally killed one of the whites threatening their lives and homes. And so it began-a chain of events that brought America's greatest attorney, Clarence Darrow, into the fray and transformed Sweet into a controversial symbol of equality. Historian Kevin Boyle weaves the police investigation and courtroom drama of Sweet's murder trial into an unforgettable tapestry of narrative history that documents the volatile America of the 1920s and movingly re-creates the Sweet family's journey from slavery through the Great Migration to the middle class. Ossian Sweet's story, so richly and poignantly captured here, is an epic tale of one man trapped by the battles of his era's changing times. Arc of Justice is the winner of the 2004 National Book Award for Nonfiction.

Bestselling author Michael Shermer's exploration of science and morality that demonstrates how the scientific way of thinking has made people, and society as a whole, more moral From Galileo and Newton to Thomas Hobbes and Martin Luther King, Jr., thinkers throughout history have consciously employed scientific techniques to better understand the non-physical world. The Age of Reason and the Enlightenment led theorists to apply scientific reasoning to the non-scientific disciplines of politics, economics, and moral philosophy. Instead of relying on the woodcuts of dissected bodies in old medical texts, physicians opened bodies themselves to see what was there; instead of divining truth through the authority of an ancient holy book or philosophical treatise, people began to explore the book of nature for themselves through travel and exploration; instead of the supernatural belief in the divine right of kings, people employed a natural belief in the right of democracy. In The Moral Arc, Shermer will explain how abstract reasoning, rationality, empiricism, skepticism--scientific ways of thinking--have profoundly changed the way we perceive morality and, indeed, move us ever closer to a more just world.

This book presents refereed and revised papers presented at GREC 2001, the 4th IAPR

International Workshop on Graphics Recognition, which took place in Kingston, Ontario, Canada in September 2001. Graphics recognition is a branch of document image analysis that focuses on the recognition of two-dimensional notations such as engineering drawings, maps, mathematical notation, music notation, tables, and chemical structure diagrams. Due to the growing demand for both off-line and on-line document recognition systems, the field of graphics recognition has an exciting and promising future. The GREC workshops provide an opportunity for researchers at all levels of experience to share insights into graphics recognition methods. The workshops enjoy strong participation from researchers in both industry and academia. They are sponsored by IAPR TC-10, the Technical Committee on Graphics Recognition within the International Association for Pattern Recognition. Edited volumes from the previous three workshops in this series are available as Lecture Notes in Computer Science, Vols. 1072, 1389, and 1941. After the GREC 2001 workshop, authors were invited to submit enhanced versions of their papers for review. Every paper was evaluated by three reviewers. We are grateful to both authors and reviewers for their careful work during this review process. Many of the papers that appear in this volume were thoroughly revised and improved, in response to reviewers' suggestions.

This splendid chapbook of thirteen poems by Ralph Culver continues to add to his reputation as one of New England's most respected and authoritative voices. A true "poet's poet," Culver has collected in *So Be It* a cycle of poems, divided into three sections, that moves from "Boy at the Plate"--sharply pointed examinations of childhood memories--through compelling and at times disquieting poems on adulthood and family ("Last Call"), and concluding with the title section featuring a quartet of poems with a well-earned, meditative, spiritually generous worldview. As always, Culver's language is sensuous, evocative, almost cinematic in its descriptive prowess, encompassing a remarkable range of poetic styles from free to formal. From the cover: "In the title poem of this striking sheaf, Ralph Culver--one of New England's truly distinguished voices--refers to '...this hunger. How it goes on, and tomorrow, and always, / blazing up in the body, torching the years to ash.' That seems to me an accurate precis of what goes on in *So Be It*. Though the perspective is generally retrospective (few if any have recalled the wonder and bafflement of childhood better than this poet), the 'blaze' of thought and emotion in his poetry carries vigorously forward into the present." --Sydney Lea

The Arc Cengage Learning

"The capacitated transshipment problem was originally developed as an extension of the transportation or distribution problem. The transportation problem is a flow network model in which every node is either an origin or a destination. Typically, the origins are production plants and the destinations are consumer markets for some commodity, and a cost is associated with shipping one unit from a given plant to a given market. If some intermediate nodes are introduced, such as warehouses, which are not origins or destinations, the network becomes a transshipment model. Finally, if some or all shipping routes, or arcs in the model, have limits in the amount of flow they may carry, the problem is termed "Capacitated." Any transshipment problem may be solved with a linear programming (LP) model, where each arc is a variable and each node is a constraint. The Simplex Method, commonly used in LP problems, may be specialized to solve these problems very efficiently by exploiting the inherent special network structure. The key property of networks, essential to the algorithm, is the spanning tree characterization of the basis. The Simplex Method pivots from one basic feasible solution, or spanning tree, to another until optimality is reached. The basis tree provides a unique relationship between the basic variables and the constraints so that the reduced costs may be computed, the pivot procedure completed, and the basis priced out all by simple addition, rather than by matrix operations with the usual tableau. It also provides integer valued basic solutions when supplies, demands and arc bounds are integers"--Document.

"This monograph highlights the evolution of Carlson's work from the early Larry's Markets to projects currently in design. For Carlson, each new project is an opportunity to stretch the design envelope and to experiment with materials and shapes that expand the art and craft of the firm's work. From this open-minded, idea-based design approach, the work of Carlson Architects continues to explore, invent, and evolve."--BOOK JACKET. Millennial Tales' is a collection of short stories that portray our society and its happenings. Every person reacts to circumstances in a unique way and it is this display of emotions that has been the foundation for spinning yarns to weave my stories. Each of these stories is the result of my desire to reflect and comment in an interesting manner on whatever I have seen, heard, or read. All characters featured in the stories are a product of my imagination, and therefore, fictional. Any resemblance to people in real life is purely coincidental. My apologies if some sentiments have been hurt in the process. Happy reading!

The international refugee regime is fundamentally broken. Designed in the wake of World War II to provide protection and assistance, the system is unable to address the record numbers of persons displaced by conflict and violence today. States have put up fences and adopted policies to deny, deter, and detain asylum seekers. People recognized as refugees are routinely denied rights guaranteed by international law. The results are dismal for the millions of refugees around the world who are left with slender prospects to rebuild their lives or contribute to host communities. T. Alexander Aleinikoff and Leah Zamore lay bare the underlying global crisis of responsibility. The Arc of Protection adopts a revisionist and critical perspective that examines the original premises of the international refugee regime. Aleinikoff and Zamore identify compromises at the founding of the system that attempted to balance humanitarian ideals and sovereign control of their borders by states. This book offers a way out of the current international morass through refocusing on responsibility-sharing, seeing the humanitarian-development divide in a new light, and putting refugee rights front and center.
