The zander (Sander lucioperca), sander or pikeperch, is a species of ray-finned fish from the family Percidae, which includes the perches, ruffes and darters. It is found in freshwater and brackish habitats in western Eurasia. It is a popular game fish and has been introduced to a variety of localities outside its native range.

## Invading

Zebra mussels are very adaptable to their environment. Once introduced to a new lake or other body of freshwater, they can quickly crowd out and devastate local populations of other species. They can also clog up the intake pipes in water treatment and power plants, and damage boats and fishing equipment.

### *BJC / The Beauty and Joy of Computing*

An invasive species is an introduced organism that negatively alters its new environment. Although their spread can have beneficial aspects, invasive species adversely affect the invaded habitats and bioregions, causing ecological, environmental, and/or economic damage. Sometimes the term is used for native species that invade human habitats and become invasive pests.

At the beginning of the 21st Century monsters still roam the remote, and sometimes not so remote, corners of our planet. It is our job to search for them. The Centre for Fortean Zoology [CFZ] is - we believe - the largest professional, scientific and full-time organisation in the world dedicated to cryptozoology - the study of unknown animals. Since 1992 the CFZ has carried out an unparalleled ...

Rants may be fun to create for some people but, I like to deal with facts and not force it down people's throats. That is my style. Though, if something really important comes up and it annoys me, I will consider writing a rant or two in the future. Any type of writing I have not expressed before is up for consideration in the future.
